The wealth of Egypt was principally derived from taxes, foreign tribute, monopolies, commerce, mines and, above all, from the productions of a fruitful soil. The wants of the poorer classes were easily satisfied: the abundance of grain, herbs and esculent plants afforded an ample supply to the inhabitants of the valley of the Nile at a trifling expense and with little labor; and so much corn was produced in this fertile country that after sufficing for the consumption of a very extensive population it offered a great surplus for the foreign market, and afforded considerable profit to the government, being exported to other countries or sold to the traders who visited Egypt for commercial purposes.

The gold mines of the Bisharee desert were in those times very productive; and though we have no positive notice of their first discovery, there is reason to believe they were worked at the earliest periods of the Egyptian monarchy. The total of the annual produce of the gold and silver mines (which Diodorus, on the authority of Heataeus, says was recorded in the tomb of Osymandias at Thebes, apparently a king of the nineteenth dynasty) is stated to have been three thousand two hundred myriads or thirty-two millions of mine—a weight of that country called by the Egyptians *mn* or *ma*, sixty of which were equal to one talent. The whole sum amounted to one hundred and thirty-three millions sterling, or six hundred and sixty-five million dollars in gold of our money, but it was evidently exaggerated.

The position of the silver mines is unknown, but the gold mines of Allaga, already mentioned, and other quartz diggings, have been discovered, as well as those of copper, lead, iron and emeralds, all of which are in the desert near the Red Sea; and the sulphur, which abounds in the same districts, was not neglected by the ancient Egyptians.

The abundance of gold and silver in Egypt and other ancient countries, and the sums recorded to have been spent, accord well with the reputed productiveness of the mines in those days; and as the subject has become one of peculiar interest, it may be well to inquire respecting the quantity and the use of the precious metals in ancient times. They were then mostly confined to the treasures of princes, and of some rich individuals; the proportion employed for commercial purposes was small, copper sufficing for most purchases in the home market, and nearly all the gold and silver money (as yet uncoined) was in the hands of the wealthy few. The manufacture of jewelry and other ornamental objects took up a small portion of the great mass, but it required the wealth and privilege of royalty to indulge in a grand display of gold and silver vases or similar objects of size and value.

The mines of those days, from which was derived the wealth of Egypt, Lydia, Persia and other countries, afforded a large supply of the precious metals; and if most of them are now exhausted or barely retain evidences of the treasures they once gave forth, there can be no doubt of their former productiveness; and it is as reasonable to suppose that gold and silver abounded in early times in those parts of the world which were first inhabited as they did in countries more recently peopled. They may never have afforded at any period the immense riches of a California or an Australia, yet there is evidence of their having been sufficiently distributed over various parts of the Old World.

For though Herodotus (iii. 106) says that the extremities of the earth possess the greatest treasures, those extremities may approach or become the centre of civilization when they arrive at that eminence which all great countries in their turn seem to have a chance of reaching; and Britain, the country of the greatly-coveted tin, once looked upon as separated from the rest of mankind, is now one of the commercial centres of the world. The day too may come when Australia and California will be rivals for a similar distinction, and England, the rendezvous of America in her contest with Europe, will yield its turn to younger competitors.

The greatest quantity of gold and silver in early times was derived from the East, and Asia and Egypt possessed abundance of these metals. The trade of Colchis and the treasures of the Arimaspes and Massagetae, coming from the Ural, or from the Altai, mountains, supplied much gold at a very early period, and Indian commerce sent a large supply to Western Asia. Spain, the Isle of Thasos and other places were resorted to by the Phœnicians, particularly for silver; and Spain for its mines became the El Dorado of those adventurous traders.

The mines of the eastern desert, the tributes from Ethiopia and Central Africa, as well as from Asia, enriched Egypt with gold and silver; but it was long before Greece, where in heroic times the precious metals were scarcely known, obtained a moderate supply of silver from her own mines, and gold only became abundant there after the Persian war.

Thrace and Macedonia produced gold as well as other countries, but confined it to their own use, as Ireland employed the produce of its mines, and as early Italy did when its various small States were still free from the Roman yoke; and though the localities from which silver was obtained in more ancient times are less known, it is certain that it was used at a very remote period, and (as before stated) it was commonly employed in Abraham's time for mercantile transactions.

Gold is mentioned on the Egyptian monuments of the fourth dynasty, and silver was probably of the same early time, but gold was evidently known in Egypt before silver, which is consistent with reason, gold being more easily obtained than silver, and frequently near the surface or in streams.

The relative value and quantity of the precious metals in the earliest times in Egypt and Western Asia are not known; and even if a greater amount of gold were found mentioned in a tribute, this could be no proof of the silver being more rare, as it might merely be intended to show the richness of the gifts. In the tribute brought to Thothmes III. by the southern Ethiopians and three Asiatic people, the former present scarcely any silver, but great quantities of gold in rings, ingots and dust. The Asiatic people of Pount bring two baskets of gold rings and one of gold dust in bags, a much smaller amount of gold than the Ethiopians and no silver; those of Kufa or Kaf more silver than gold, and a considerable quantity of both made into vases of handsome and varied shapes; and the Rot-n-n, apparently living on the Euphrates, present rather more gold than silver—a large basket of gold and a smaller one of silver rings, two small silver and several large gold vases, which are of most elegant shape, as well as colored glass or porcelain cups and much incense and bitumen.

When we read of the enormous wealth amassed by the Egyptian and Asiatic kings or the plunder

by Alexander and the Romans, we wonder how so much could have been obtained; for even allowing for considerable exaggeration in the accounts of early times, there is no reason to disbelieve the private fortunes of individuals at Rome, and the sums squandered by them, or even the amount of some of the tributes levied in the East. Of ancient cities, Babylon is particularly cited by Herodotus and others for its immense wealth. Diodorus mentions a golden statue of Jupiter at Babylon forty feet high weighing one thousand Babylonian talents; another of Rhea of equal weight, having two lions on its knees, and near it silver serpents of three hundred talents each; a standing statue of Juno weighing eight hundred talents, holding a snake and a sceptre set with gems, as well as a golden table of five hundred talents weight, on which were two cups weighing three hundred talents and two censers each of three hundred talents weight, with three golden bowls, one of which, belonging to Jupiter, weighed twelve hundred talents, the others each six hundred, making a total of at least six thousand nine hundred talents, reckoned equal to eleven millions sterling. And the golden image of Nebuchadnezzar, sixty cubits or ninety feet high, at the same ratio, would weigh two thousand two hundred and fifty talents.

The annual tribute of Solomon was six hundred and sixty-six talents of gold, besides that brought by the merchants and the present from the queen of Sheba of one hundred and twenty talents, and the quantity of gold and silver used in the temple and his house was extraordinary. Mr. Jacob, in his valuable work on the precious metals, has noticed many of these immense sums collected in old times. Among them are the tribute of Darius, amounting to nine thousand eight hundred and eighty talents of silver and four thousand six hundred and eighty of gold, making a total of fourteen thousand five hundred and sixty, estimated at about three and a quarter millions sterling, the sums taken by Xerxes to Greece, the wealth of Cræsus, the riches of Pytheus, king of a small territory in Phrygia, possessing gold and silver mines, who entertained the army of Xerxes and gave him two thousand talents of silver and four million ninety three thousand staters of gold, equal to four million seven hundred and seventy thousand pounds of our money, or according to Larcher, three million six hundred thousand. Apicius wasted on luxurious living four hundred and eighty-four thousand three hundred and seventy-five pounds; Caligula laid out on a supper eighty thousand seven hundred and twenty-nine pounds; and the ordinary expense of Lucullus for a supper in the Hall of Apollo was fifty thousand drachms, or one thousand six hundred and fourteen pounds. The house of Marius, bought of Cornelia for two thousand four hundred and twenty-one pounds, was sold to Lucullus for sixteen thousand one hundred and fifty-two pounds; the burning of his villa was a loss to M. Scaurus of eight hundred and seven thousand two hundred and ninety-one pounds, and Nero's golden house must have cost an immense sum, since Otho laid out in furnishing a part of it four hundred and three thousand six hundred and forty-five pounds.

The whole revenue of the Roman empire under Augustus is "supposed to have been equal to two hundred millions of our money;" and at the time of his death (A.D. 14) the gold and silver in circulation throughout the empire is supposed to have amounted to three hundred and fifty-eight million pounds, which, at a reduction of one grain in three hundred and sixty every year for wear,

would have been reduced by A.D. 482 to eighty-seven million thirty-three thousand and ninety-nine pounds; and when the mines of Hungary and Germany began to be worked, during the seventh and ninth centuries, the entire amount of coined money was not more than about forty-two at the former and thirty-three or thirty-four million sterling at the latter period, so that if no other supply had been obtained, the quantity then circulating would long since have been exhausted.

The quantity of the precious metals formerly used for the purposes of luxury greatly diminished after the decline of the Roman empire, and in the Middle Ages they were sparingly employed except for coinage, ornamental work in gold and silver, mostly executed by first-rate artists, being confined to men of rank, till the opening of new mines added to the supply, which was afterward increased by the abundant treasures of America, and the quantity applied to ornamental purposes then began to vie with that of olden times. M. Leon Faucher even calculates the annual abstraction of the precious metals from circulation by use for luxury, disasters at sea and export at five million sterling in Europe and the United States.

The silver from the American mines exported to Europe in one hundred years, to 1630, gave an addition to the currency of one million sterling annually, besides that used for other purposes or re-exported; and from 1630 to 1830 from one and a half to two million annually, an increase in the quantity used for currency having taken place, as well as in that exported to India and employed for purposes of luxury. Humboldt states the whole quantity of gold from the American mines up to 1803 to be one hundred and sixty-two million of pounds in weight, and of silver seven billion one hundred and seventy-eight million, or forty-four of silver to one of gold.

Again, the total value of gold produced during three centuries to 1848, including that from Russia, has been estimated at five hundred and sixty-five million; and the total annual quantity of gold, before the discovery of the Californian fields, has been reckoned about ten million pounds. That from California and Australia already amounts yearly to thirty-four million pounds (or three and two-fifth times as much as previously obtained), and is still increasing; but though far beyond the supply afforded by the discovery of America, the demand made upon it by the modern industry of man, together with the effect of rapid communication and of the extension of trade, as well as by the great deficiency of gold in the world, will prevent its action being felt in the same way as when the American supply was first obtained; and still less will be the effect now than it would have been in ancient times, if so large and sudden a discovery had then been made. For as Chevalier says, "Vast as is the whole amount of gold in the world, it sinks into insignificance when contrasted with the aggregate product of other branches of human industry. If they increase as fast as the gold, little or no alteration will take place in its value, which depends on the relation between it and the annual production of other wealth."

In the infancy of her existence as a nation, Egypt was contented with the pursuits of agriculture, but in process of time the advancement of civilization and refinement led to numerous inventions and to improvements in the ordinary necessities of life, and she became at length a great manufacturing country, famed amongst foreigners for the excellence of her fine linen, her cotton and

woolen stuffs, cabinet work, porcelain, glass and numerous branches of industry. That the Egyptians should be more known abroad for their manufactures than for those occupations which related solely to themselves might be reasonably expected in consequence of the exportation of the commodities in which she excelled, and the ignorance of foreigners respecting the internal condition of a country from which they were excluded by the jealousy of the natives, though, judging from the scanty information imparted to us by the Greeks, who in later times had opportunities of examining the valley of the Nile, it appears that we have as much reason to blame the indifference of strangers who visited the country as the exclusiveness of the Egyptians.

There are fortunately other sources of information, which give an insight into many of their pursuits; and independent of what may be gleaned from Herodotus and Diodorus, the paintings in the tombs of Thebes and Lower Egypt show the experience they had acquired in the management of their lands and herds, and the different duties connected with husbandry, as well as their progress in various arts, and even in scientific knowledge.

In considering the state of agriculture in Egypt, we ought not to confine its importance to the direct and tangible benefits it annually conferred upon the people by the productiveness of the soil; the influence it had on the manners and scientific acquirements of the people is no less obvious; and to the peculiar nature of the Nile and the effects of its inundation has been reasonably attributed the early advancement of the Egyptians in geometry and mensuration. Herodotus, Plato, Diodorus, Strabo, Clemens of Alexandria, Iamblichus and others ascribe the origin of geometry to changes which annually took place from the inundation and to the consequent necessity of adjusting the claims of each person respecting the limits of the land; and though Herodotus may be wrong in limiting the commencement of these observations to the reign of Sesostris, his remark tends to the same point and confirms the general opinion that this science had its origin in Egypt.

It is reasonable to suppose that as the inundation subsided litigation often occurred between neighbors respecting the limits of their unenclosed fields; and the fall of a portion of the bank, carried away by the stream during the rise of the Nile, frequently made great alterations in the extent of land near the river side; a mode of determining the quantity which belonged to each individual was therefore very necessary, both for settling disputes with a neighbor and for ascertaining the tax due to the government. But it is difficult to fix the period when the science of mensuration commenced; if we have ample proofs of its being known in the time of Joseph, this does not carry us far back into the ancient history of Egypt, and there is evidence of geometry and mathematics having already made nearly the same progress at the earliest period of which any monuments remain as in the later era of the great Remeses.

Besides the mere measurement of superficial area, it was of the highest importance to agriculture and to the interests of the peasant to distribute the benefits of the inundation in due proportion to each individual, that the lands which were low might not enjoy the exclusive advantages of the fertilizing water by constantly draining it from those of a higher level. For this purpose they were obliged to ascertain the various elevations of the country, and to construct accurately

leveled canals and dykes; and, if it be true that Menes, their first king, turned the course of the Nile into a new channel he had made for it, we have a proof of their having, long before his time, arrived at considerable knowledge in this branch of science, since so great an undertaking could only have been the result of long experience.

These dykes were succeeded or accompanied by the invention of sluices and all the mechanism appertaining to them; the regulation of the supply of water admitted into plains of various levels, the report of the exact quantity of land irrigated, the depth of the water and the time it continued upon the surface, which determined the proportionate payment of the taxes, required much scientific skill, and the prices of provisions for the ensuing year were already ascertained by the unerring prognostics of the existing inundation. Hence they were led to make minute observations respecting the increase of the Nile during that season; Nilometers, for measuring its gradual rise or fall, were constructed in various parts of Egypt, and particular persons were appointed to observe each daily change and to proclaim the favorable or unfavorable state of this important phenomenon. On these reports depended the time chosen for opening the canals, whose mouths were closed until the river rose to a fixed height; upon which occasion grand festivities were proclaimed throughout the country, in order that every person might show his sense of the great benefit vouchsafed by the gods to the land of Egypt. The introduction of the waters of the Nile into the interior, by means of these canals was allegorically construed into the union of Osiris and Isis; the instant of cutting away the dam of the earth which separated the bed of the canal from the Nile was looked forward to with the utmost anxiety, and many omens were consulted in order to ascertain the auspicious moment for this important ceremony.

Superstition added greatly to the zeal of a credulous people. The deity or presiding genius of the river was propitiated by suitable oblations, both during the inundation and about the period when it was expected; and Seneca tells us that on a particular fête the priests threw presents and offerings of gold into the river near Philæ, at a place called the Veins of the Nile, where they first perceived the rise of the inundation. It was reasonable that the grand and wonderful spectacle of the inundation should excite in them feelings of the deepest awe for the divine power to which they were indebted for so great a blessing; and a plentiful supply of water was supposed to be the result of the favor of the gods, as a deficiency was attributed to their displeasure, punishing the sins of an offending people.

On the inundation depended all the hopes of the peasant; it affected the revenue of the government both by its influence on the scale of taxation and by the greater or less profits on the exportation of grain and other produce, and involved the comforts of all classes. For in Upper Egypt no rain fell to irrigate the land; it was a country which did not look for showers to advance its crops; and if "these fell in Lower Egypt, they were confined to that district, and heavy rain was a prodigy in the Thebaid." But though, speaking generally, it may be said not to rain there, heavy storms did occasionally fall in the vicinity of Thebes, as is proved by the appearance of the deep ravines worn by the water in the hills about the tombs of the kings,

probably, as now, after intervals of fifteen or twenty years; and modern experience shows that slight showers fall at Thebes about five or six times a year, in Lower Egypt much more frequently, and at Alexandria almost as often as in the South of Europe.

The result of a favorable inundation was not confined to tangible benefits; it had the greatest effect on the mind of every Egyptian by long anticipation; the happiness arising from it, as the regrets on the appearance of a scanty supply of water, being far more sensibly felt than in countries which depend on rain for their harvest, where future prospects are not so soon foreseen. The Egyptian, on the other hand, was able to form a just estimate of his crops even before sowing the seed or preparing the land for its reception.

Other remarkable effects may likewise be partially attributed to the interest excited by the expectation of the rising Nile; and the accurate observations required for fixing the seasons, and the period of the annual return of the inundation, contributed greatly to the early study of astronomy in the valley of the Nile. The precise time when these and other calculations were first made by the Egyptians it is impossible now to determine; but from the height of the inundation being already recorded in the reign of the kings of the twelfth dynasty, we may infer that constant observations had been made, and Nilometers constructed, even before that early period; and astronomy, geometry and other sciences are said to have been known in Egypt in the time of the hierarchy which preceded the accession of their first king, Menes.

We cannot, however, from the authority of Diodorus and Clemens of Alexandria, venture to assert that the books of Hermes which contained the science and philosophy of Egypt, all date before the reign of Menes; the original work, by whomsoever it was composed, was probably very limited and imperfect; and the famous books of Hermes were not all written at the same period; like the Jewish collection of poems received under the name of David's Psalms, some of which date after the Babylonish captivity. Nor was Thoth, Hermes or Mercury a real personage, but (as I have before stated) a deified form of the divine intellect, which being imparted to man had enabled him to produce this effort of genius; and the only argument in favor of the high antiquity of any portion of this work is the tradition of the people, supported by the positive proof of the great mathematical skill of the Egyptians in the time of Menes, by the change he made in the course of the Nile. It may also be inferred from their advancement in the arts and sciences at this early period that many ages of civilization had preceded the accession of their first monarch.

At all events, we may conclude that to agriculture and the peculiar nature of the river the accurate method adopted by the Egyptians in the regulation of their year is to be attributed; that by the return of the seasons, so decidedly marked in Egypt, they were taught to correct those inaccuracies, to which an approximate calculation was at first subject; and that thus the calendar, which could not long be suffered to depend on the vague length of a solar revolution, was necessarily brought round to a fixed period.

It is highly probable that the Egyptians, in their infancy as a nation, divided their year into twelve lunar months, the twenty-eight years of Osiris' reign being derived, as Plutarch says, from the number of days the moon takes to perform her

course round the earth; and it is worthy of remark that the hieroglyphic signifying "month" was represented by the crescent of the moon, as is abundantly proved from the sculptures and the authority of Horapollo. From this we also derive another very important conclusion—that the use of hieroglyphics was of a far more remote date than is generally supposed, since they existed previous to the adoption of solar months.

The substitution of solar for lunar months was the earliest change in the Egyptian year. It was then made to consist of twelve months of thirty days each, making a total of three hundred and sixty days; but as it was soon discovered that the seasons were disturbed, and no longer corresponded to the same months, five additional days were introduced at the end of the last month, Mesore, in order to remedy the previous defect in the calendar, and to ensure the returns of the seasons to fixed periods.

The twelve months were Thoth, Paopi, Athor, Choeak, Tobi, Mechir, Phamenoth, Pharmuthi, Pachons, Paoni, Epep, Mesore; and the year being divided into three seasons, each period comprised four of these months. That containing the first four was styled the season of the "plants;" the next perhaps of the "manifestation," or "appearance of the inundation," and the last season of the "tanks of water," which had been laid up when the Nile subsided. The first of Thoth, in the time of Julius Caesar, fell on the twenty-ninth of August, and Mesore, the last month, began on the twenty-fifth of July.

A people who gave any attention to subjects so important to their agricultural pursuits, could not long remain ignorant of the deficiency which even the intercalation of the five days left in the adjustment of the calendar; and though it required a period of fourteen hundred and sixty-one years for the seasons to recede through all the twelve months, and to prove by the deficiency of a whole year the imperfection of this system, yet it would be obvious to them, in the lapse of a very few years, that a perceptible alteration had taken place in the relative position of the seasons; and the most careless observation would show that in one hundred and twenty years, having lost a whole month, or thirty days, the rise of the Nile, the time of sowing and reaping, and all the periodical occupations of the peasant, no longer coincided with the same month. They therefore added a quarter day to remedy the defect, making every fourth year to consist of three hundred and sixty-six days; which, though still subject to slight error, was a sufficiently accurate approximation, and the length of each year was computed from one heliacal rising of the Dog-star to another. It was therefore called the "Sothic year," and Censorinus says "it was termed by the Greeks 'kunikon,' by the Latins 'canicularum,' because its commencement is taken from the rising of the Dog-star on the first day of the month, called by the Egyptians Thoth." But that day was not made the beginning of the year because Sothis rose heliacally upon it; the Sothic period was fixed when it coincided with it, and the beginning of the year, or the first of Thoth, was, perhaps, originally at a very different season, though they even pretended in later times that the commencement of the Sothic period corresponded with the beginning of the world. Some have supposed that the name Thoth was formerly applied to the first day alone, and not to the month itself.

That the five days, called of the Epaet, were added at a most remote period, may readily be

credited; and so convinced were the Egyptians of this that they referred it to the fabulous times of their history, wrapping it up in the guise of allegory; and it is highly probable that the intercalation of the quarter day, or one day in four years, was also of very early date. The first direct notice of the five days is on a box at Turin of the time of Amunoph III., but M. de Rouge has shown they were used in the twelfth dynasty, and that the fête of Sothis was celebrated at the same period.

The Sothic period, as is well known, was fixed in the year thirteen hundred and twenty-two before our era, when the Egyptians had ascertained by observation that fourteen hundred and sixty Sothic were equal to fourteen hundred and sixty-one solar years, the seasons having in that time passed through every part of the year, and returned again to the same point. They thus established a standard for adjusting their calendar, under the name of the Sothic period; and though for ordinary purposes, as the dates of their kings and other events, they continued to use the vague year of three hundred and sixty-five days, every calculation could thus be corrected, by comparing the time of this last with that of the Sothic or sidereal year. When the idea first occurred to them is unknown, but the oath imposed on the Egyptian kings "that they would not intercalate any month or day, but that the sacred year of three hundred and sixty-five days should remain as instituted in ancient times," evidently had for its object the employment of both the years for a counter-reckoning in present and past records; and as the Sothic period was fixed in thirteen hundred and twenty-two B. C. from observation, it is evident that these must have been continued during the time that elapsed up to that year, which would throw back the beginning of their observations to a very remote age. The king in whose reign the Sothic period was fixed is said to be Menophres, but the name he is known by on the monuments has not yet been ascertained, though he seems to have lived about the beginning of the nineteenth dynasty.

The pursuits of agriculture did not prevent the Egyptians from arriving at a remarkable pre-eminence as a manufacturing nation; and that they should successfully unite the advantages of an agricultural and a manufacturing country is not surprising, when we consider that in those early times the competition of other manufacturing countries did not interfere with their market; and though Tyre and Sidon excelled in various manufactures, many branches of industry brought exclusive advantages to the Egyptian workman. Even in the flourishing days of the Phœnicians, Egypt exported linen to other countries, and she probably enjoyed at all times an entire monopoly in this, and every article she manufactured, with the caravans of the interior of Africa.

The Egyptian land measure was the *aroura* (or *arura*), a square of one hundred cubits, covering an area of ten thousand cubits, and like our acre solely employed for measuring land. It contained twenty-nine thousand one hundred and eighty-four square feet English (the cubit being full twenty and a half inches), and was little more than three quarters of an English acre. The other measures of Egypt were the *schene*, equal to sixty stades in length, which served like the *stade* of Greece, the *parasang* of Persia and the more modern mile for measuring distance; the cubit, which Herodotus says was equal to that of Samos; and the palm and digit, which were parts of the cubit. Though the

*stade* is often used by Greek writers in giving measurements in Egypt, it was not an Egyptian measure; and generally speaking it was equal to six hundred Greek feet. They also mention the *plethrum* in giving the length of some buildings, as the pyramids; but this was properly a Greek square measure, containing ten thousand square feet. When used as a measure of length, it was estimated at one hundred feet; though, if Herodotus' measurement of the great pyramid be correct, it could not complete one hundred of our feet, as he gives the length of each face eight *plethra*. But little reliance can be placed on his measurements, since in this he exceeds the true length; and to the face of the third pyramid he only allows three *plethra*, which, calculating the *plethrum* at one hundred feet, is more than half a *plethrum* short of the real length, each face, according to the measurement of Colonel Howard Vyse, being three hundred and fifty-four feet.

The total length of each face of the great pyramid when entire was to have been seven hundred and fifty-four or seven hundred and fifty-five feet, which would be exactly four hundred and forty cubits; but neither this nor the courts of the temples, the statues and other monuments can be depended upon for the exact length of that Egyptian measure.

Happily, other data of a less questionable nature are left us for this purpose, and the graduated cubit in the Nilometer of Elephantine, and the wooden cubits discovered in Egypt, suffice to establish its length, without the necessity of conjecture.

Egyptian architecture was at first simple, as was the Greek, and both had the severe fluted column, which as I have shown originated in the still more simple square pillar of an Egyptian quarry. The Greeks varied their style by the introduction of the Ionic, and a basket capital with leaves which by degrees took the form of the Corinthian, borrowing from the Ionic, and from the basket capital of Egypt, and varying the ornaments, as they had before modified the volutes; for these were also derived from the Egyptian columns attached to the canopies of the kings. But here the variety ended; or at least they did not go the length of the Egyptians in placing columns of different orders one by the other in the same portico. This was confined to the taste of Egyptian (and of the later Gothic) architects. And though the original Egyptian column was so simple, no foreign influence introduced the change; it was of native growth; and the water-plant and other columns, as I have already shown, date from the time of the earliest periods before the invasion of the Shepherds. Their formation too was consistent with the style of their decoration.

But while the architecture of the Egyptians and that of the Greeks had some points of resemblance in certain details, their general character was essentially distinct; and the Egyptian flat roof had a totally different effect from the pediment or gable of a Greek temple. The plans of their sacred buildings were also quite dissimilar, and the circular form of the early Greek tomb was unknown in Egypt. The Egyptians, too, a cautious people, made durability their chief object, and they never sought for that beauty to which the Greeks were so successful in attaining. If certain nations, like individuals, are gifted with peculiar talents, none have been favored with the same variety as the Greeks; and all their habits and feelings were eminently suited to the development of taste. Not so those of the Egyptians, who, independently of

## THE ANCIENT EGYPTIANS.

the restrictions imposed upon them, were deficient in the requisites of that purpose. They lacked the imaginative faculty of the Greeks; they thought chiefly of carrying out a particular object; and their speculative powers led to abstruse theories, not to the ideal conceptions required for excellence in art.

With regard to the pyramidal or sloping line in Egyptian buildings, it is scarcely necessary to say that its object was greatly solidity; and its use is one of many arguments against the opinion that Egyptian temples had their origin in excavated monuments; for it is evident that the pyramidal line can neither be required, nor be consistently introduced, in the walls of a rock temple; and wherever the sloping line does occur there, it is merely in the ornamental mouldings, and is one more evidence of the imitation of a constructed monument. Another misconception, respecting Egyptian architecture, is that they began with large buildings because the mountains gave them the power of excavating to any depth, and extending the front to any length; which is disproved by the fact that the oldest sanctuaries were of very small dimensions; large monuments were erected before large rock temples were made; and the mere irregular quarry (opened solely to supply materials) did not bear any resemblance to the plan or general character of a temple. The attempt, too, to account for the use of large blocks, from the "facility of transport" in a level country, and the preference given by the Greeks to smaller or shorter architraves, from the difficulty of conveying them from the quarries in a hilly country, is equally unsatisfactory, and is far from being consistent with the positions of many early Greek temples, and with what may be observed in other countries, since we find that in the mountainous districts of Syria heavier blocks were used than in the temples of Egypt.

If the employment of large blocks were thus to be accounted for, it would be difficult to explain how the Syrians acquired the habit, or obtained the experience, which enabled them to move the enormous stones at Baalbek, far heavier than any in Egypt, being upward of sixty feet long by nine broad and twelve feet thick. Some stones in the walls of Jerusalem are more than twenty feet in length; and massive columns of a single piece were raised in temples on the mountain summits of Syria. It was therefore as common a practice to use large blocks in the mountainous Syria as in the level Egypt; so that neither the great breadth of the Egyptian, nor the narrowness of Greek, or any other intercolumniations, can be accounted for by the facility or difficulty of transporting long blocks of stone to serve as architraves. Nor was size originally a condition in the edifices of the Egyptians. They began, as did the Greeks, with small monuments, which increased in scale with the increase of wealth and the advancement of art; and though, as their taste was developed, the Egyptians preferred monuments of large size, the origin of this preference must not too hastily be attributed to the facility of transporting the blocks, nor even to the convenience of obtaining materials near at hand; since the granite quarries of Syene were upward of one hundred and thirty miles from Thebes, or five times as much from Memphis; and the monoliths of that material erected in the Delta were conveyed more than eight hundred miles. The same hasty conclusion has been made about the largest colossi being peculiar to Egypt. But that of Olympian Jove was sixty feet high; that of Apollo, mentioned by Pausanias, was

thirty cubits, or forty-five feet; and the Colossus of Rhodes, measuring one hundred and five feet, far exceeded any in Egypt.

The arch was employed in Egypt at a very early period; and crude brick arches were in common use in roofing tombs at least as early as Amunoph I., in the sixteenth century before our era. And since I first discovered one at Thebes bearing his name, others have been found of the age of Thothmes III. (his fourth successor) and of Remeses V. It even seems to have been known in the time of the twelfth dynasty, judging from the representation of what appear to be vaulted granaries at Beni Hassan.

That it should have originated in a country where wood was rare is consistent with probability; and it has been conjectured that the chambers in the large brick pyramids near Memphis were arched. Those at Thebes, of a rather later period, were so roofed; nor is it unreasonable to suppose that in the other large ones they had the same construction; and the superiority over the stone pyramids, boasted in the inscription upon that of Asychis, has been supposed to consist in its vaulted chambers. It is also evident that in the time of Osirtasen the vaulted ceilings of rock-tombs were made in imitation of arches; and the arch seems to have been particularly used in sepulchral monuments.

The earliest stone arches are of the time of a Psammitichus, in the seventh century before our era. One of these is at Sakkara; but from the thin slabs of stone forming its roof, it is a far less satisfactory instance of the arch than some of those near the pyramids of Gizeh of the same date; though an arch being of stone is no stronger proof of its existence than are those of brick at Thebes, which are on the same principle, the bricks (like the stones) radiating to a common centre. For it is not necessary that an arch should be of any particular material; nor does the principle of the arch depend on its having a keystone; and arches, both round and pointed, are found at all ages without it. The same is the case in Egypt, and the small chapels before the pyramids of Ethiopia have instances of round and pointed arches, with and without the keystone.

Numerous crude brick arches of different dates exist in Thebes, besides the small pyramids already alluded to, some of which are of very beautiful construction. The most remarkable are the doorways of the enclosure surrounding the tombs in the Assaseef, which are composed of two or more concentric semicircles of brick, as well constructed as any of the present day. They are of the time of Psammitichus and other princes of the twenty-eighth dynasty, immediately before the invasion of Cambyses. All the bricks radiate to a common centre; they are occasionally pared off at the lower part to allow for the curve of the arch, and sometimes the builders were contented to put in a piece of stone to fill up the increased space between the upper edges of the bricks. In those roofs of houses or tombs which were made with less care, and required less solidity, the bricks were placed longitudinally in the direction of the curve of the vault, and the lower ends were then cut away considerably to allow for the greater opening between them, and many were grooved at the sides in order to retain a greater quantity of mortar between their united surfaces.

Though the oldest stone arch whose age has been positively ascertained dates only in the time of the second Psammitichus, we cannot suppose that the use of stone was not adopted by the Egypt-

ians for that species of construction previous to his reign, even if none of the arches of the pyramids in Ethiopia should prove to be anterior to his era. Nor does the absence of the arch in temples and other large buildings excite our surprise when we consider the style of Egyptian monuments, and no one who understands the character of their architecture could wish for its introduction. In some of the small temples of the oasis the Romans attempted this innovation, but the appearance of the chambers so constructed fails to please; and the introduction of an imitation of the arch into a building at Abydos, bearing the name of Sethi or Osirei, was owing to its being a sepulchral monument. Here the roof is formed of single blocks of stone reaching from one architrave to the other, which, instead of being placed in the usual manner, stand upon their edges in order to allow room for hollowing out an arch in their thickness, but its effect is by no means good.

Like the Egyptians, the Greeks abstained from introducing the arch into their monuments, being unsuited to a style already formed—an objection not felt by the Romans, who modified what they borrowed so far as to adopt the arch and break through the horizontal line of Greek architecture, thus establishing the first elements of the vertical of later times, and the great benefits conferred by the arch in covering large spaces where crowded assemblies were to meet are well demonstrated by a comparison of our churches and the great hall of Karnak, with its forest of columns to support the roof. But the Greeks were not ignorant of the arch; instances of it still remain; and Posidonius claims its invention for Democritus, who was born B.C. 460. The arched tunnel of brick under the Euphrates at Babylon, mentioned by Diodorus, also shows that it was known at a remote age in other countries as well as in Egypt.

Another imitation of the arch occurs in a building at Thebes. Here, however, a reason may perhaps be given for its introduction in addition to its being a tomb, and not bound to accord with the ordinary rules of architecture laid down for Egyptian temples. The chambers lie under a friable rock and are cased with masonry to prevent the fall of its crumbling stone; but instead of being roofed on the principle of the arch, they are covered with a number of large blocks placed horizontally, one projecting beyond that immediately below it till the uppermost two meet in the centre, the interior angles being afterward rounded off to form the appearance of a vault.

This building dates in the fifteenth century before Christ, consequently many years after the Egyptians had been acquainted with the art of vaulting, and the reason of their preferring such a mode of construction probably arose from their calculating the great difficulty of repairing an injured arch in this position and the consequences attending the decay of a single block, nor can any one suppose from the great superincumbent weight applied to the haunches that this style of building is devoid of strength and of the usual durability of an Egyptian fabric, or pronounce it ill suited to the purpose for which it was erected.

This was either an imitation of an arch, or a method of older times used before its invention, and we have other instances in Italy of false and true arches being employed contemporaneously by people well acquainted with the principle of forming voussours with stones radiating to a common centre.

The first deviation from the mode of roofing with flat stones was what is called the pent-shaped

roof, formed by the application of two sets of stones inclined toward each other at an angle of about 100°, as over the entrance to the great pyramid and the roof of the queen's chamber. The next was when the space was covered over with slabs of small dimensions, each course projecting beyond the one below it, until the uppermost ones approached each other near enough for the remaining space to be covered by a single stone. These two, used at the same time in the great pyramid, were also employed by the early Greeks, and they may be considered the first steps toward the want and invention of the arch. And this seems to confirm the notion of the boasted superiority of the brick pyramid having consisted in supplying this desideratum. Bricks certainly led to its invention, and thus small materials have contributed to the greatest variety in construction at different periods; witness groined arches as well as long-and-short-work, opus incertum, round towers and various peculiarities of brickwork. In the earliest arches the bricks were placed lengthways toward each other, and not only many of the oldest tombs at Thebes have their roofs so constructed, but the stones forming the arches at the pyramids of Gebel Berkel are placed in the same manner. This, however, was afterward abandoned, and the beautiful brick arches of the Assaseef at Thebes resemble those of modern times.

The same longitudinal arrangement of the bricks again occurs in the pointed arches of the early Christians in Egypt, and they give evidence of being a first essay of a new principle. Doubtful as to the power of an arch of this form, they only used it at first to cover passages and other small spaces, and many consisted only of one, two or three very long bricks in height with a portion of one placed between the two uppermost ones as a key. They are, however, remarkable from their antiquity, being about the seventh of our era; and though a much older pointed arch is found at Gebel Berkel as well as in Italy, and the pointed arch seems to be imitated in the time of the eighteenth dynasty, that style of building does not appear to have come into common use in the East much before the ninth century. But it was then very general; and though some dream of pointed arches having been invented in Europe, from the intersection of two round arches, we may be sure that the East gave us the first notion of the new principle, and that we derived it from the Saracens, as they composed their architecture from the Byzantine and Persian styles, and the earliest pointed architecture, if not the first pointed arches, should be looked for in Asia Minor and about Constantinople. As the Greeks instructed the Romans, the Byzantine Christians worked for the Saracens and gave them the first notions of a style which they afterward modified according to their views. The cupola introduced a new feature into the mosque, whose original simple courts and small round arches were humble imitations of Roman buildings; the golden mosaics of Byzantium, themselves descended from the "golden vaults" of imperial Rome, decorated the walls and arched ceilings of Damascus houses, as they enriched the apses of Italian basilicas, and the Byzantine or Romanesque style spread its influence over Europe and the East. But the stream of taste was diversified according to the ground over which it flowed. As yet one general system was not acknowledged as in later times when Gothic architecture was the same, with slight variations, throughout Europe; each people at first made their own selection in the principles or the mouldings they imitated; in England the rude

Saxon with its long-and-short work, the common house construction even before the age of Justinian, the more decorated Norman, and the Italian Lombard style were all indebted to the Roman and the Byzantine, and from the arrival of a fresh element from the East, itself of cognate origin, arose the Pointed style of Western Europe. Such was the progress of architecture from the earliest times, each system borrowing, adopting, or recasting the component parts of its predecessor according to the wants, climate, materials or taste of the new country of its growth.

The most ancient buildings in Egypt were constructed of limestone hewn from the mountains bordering the valley of the Nile to the east and west, extensive quarries of which may be seen at El Masara, Nesleh Sheikh Hassan, El Maabdeh and other places; and that it was used long before sandstone is proved by the tombs of the pyramids as well as those monuments themselves, and by the vestiges of old substructions and ruins in Upper Egypt. Limestone continued to be occasionally employed for building even after the accession of the twelfth dynasty; but so soon as the durability of sandstone was ascertained, the quarries of Silsilis were opened, and those materials were universally adopted and preferred for their even texture and the ease with which they were wrought.

The extent of the quarries at Silsilis is very great; and it is not by the size and scale of the monuments of Upper Egypt alone that we are enabled to judge of the stupendous works executed by the ancient Egyptians; these would suffice to prove the character they bore were the gigantic ruins of Thebes and other cities no longer in existence, and safely may we apply the expression used by Pliny in speaking of the porphyry quarries to those of Silsilis, "They are of such extent that masses of any dimensions might be hewn from them."

In one of the quarries at El Masara the mode of transporting the stone is represented. It is placed on a sledge drawn by oxen, and is supposed to be on its way to the inclined plane that led to the river, vestiges of which may still be seen a little to the south of the modern village.

Sometimes, and particularly when the blocks were large and ponderous, men were employed to drag them, and those condemned to hard labor in the quarries as a punishment were required to assist in moving a certain number of stones, according to the extent of their offence, ere they were liberated; which seems to be proved by this expression, "I have dragged one hundred and ten stones for the building of Isis at Philæ," in an inscription at the quarries of Gertassy, in Nubia. In order to keep an account of their progress, they frequently cut the initials of their name or some private mark, with the number, on the rock whence the stone was taken, as soon as it was removed; thus C. XXXII.; PD. XXXIII.; PD. XXXIV., and numerous other signs occur at the quarries of Fateereh.

All large blocks were taken from the quarry on sledges; and in a grotto behind E'Dayr, a Christian village between Antioch and El Bersheh, is the representation of a colossus which a number of men are employed in dragging with ropes—a subject doubly interesting from being of the early age of Osirtasen II., and one of the very few paintings which throw any light on the method employed by the Egyptians for moving weights.

It is not necessary that the colossus should have been hewn in the hill of El Bersheh; and this picture, though it refers to what really happened,

may also represent one of the occupations of the Egyptians, like the trades, gardening scenes and other subjects. At all events, the statue could not have been placed in the tomb, as some suppose, being too large for the doorway, and traces of it must have remained.

One hundred and seventy-two men, in four rows of forty-three each, pull the ropes attached to the front of the sledge, and grease is poured from a vase by a person standing on the pedestal of the statue, in order to facilitate its progress as it slides over the ground, which was probably covered with a bed of planks, though they are not indicated in the painting.

Some of the persons employed in this laborious duty appear to be Egyptians, the others are foreign slaves who are clad in the costume of their country; and behind are four rows of men who, though only twelve in number, may be intended to represent the "superintendents" and the set which relieved the others when fatigued.

Below are persons carrying the vases of the liquid, or perhaps water, for the use of the workmen, and some implements connected with the transport of the statue, followed by taskmasters with their wands of office. On the knee of the figure stands a man who claps his hands to the measured cadence of a song to mark the time and ensure their simultaneous draught; for it is evident that, in order that the whole power might be applied at the same instant, a sign of this kind was necessary, and the custom of singing at their work was usual in every occupation of the Egyptians, as it now is in that country, in India and many other places.

Nor is it found a disadvantage among the modern sailors of Europe, when engaged in pulling a rope, or in any labor which requires a simultaneous effort. Above are seven companies of soldiers, unarmed, holding green twigs in their hands.

The height of the statue was thirteen cubits, nineteen and a half feet, or really twenty-feet, two and a half inches, and of lime or freestone, as the color and the hieroglyphics inform us. It was bound to the sledge by double ropes, which were tightened by means of long pegs inserted between them, and twisted around until completely braided; and to prevent injury from the friction of the ropes, a compress of leather, lead or other substance was introduced at the part where they touched the statue.

It is singular that the position of the ring to which all the ropes were attached for moving the mass was confined to one place at the front of the statue, and did not extend to the back part of the sledge; but this was owing to the shortness of the body; and when of great length, it is probable that ropes were fixed at intervals along the sides, in order to give an opportunity of applying a greater moving power. For this purpose, in blocks of very great length, as the columns at Fateereh, which are about sixty feet long and eight and a half feet in diameter, certain pieces of stone were left projecting from the sides, like the trunnions of a gun, to which several ropes were attached, each pulled by its own set of men.

Small blocks of stone were sent from the quarries by water to their different places of destination in boats or rafts; and if any land-carriage was required, they were placed on sledges and rollers; but those of very large dimensions were dragged the whole way by men, overland, in the manner here represented. The immense weight of some shows that the Egyptians were well acquainted

with mechanical powers and the mode of applying a locomotive force with the most wonderful success; and the use of grease for large weights in preference to rollers is consistent with modern experience.

The obelisks transported from the quarries of Syene, at the first cataracts, in latitude 24° 5' 23", to Thebes and Heliopolis, vary in size from seventy to ninety-three feet in length. They are of one single stone; and the largest in Egypt, which is that of the great temple at Karnak, I calculate to weigh about two hundred and ninety-seven tons. This was brought about one hundred and thirty-eight miles from the quarry to where it now stands, and those taken to Heliopolis passed over a space of more than eight hundred miles. The power, however, to move the mass was the same, whatever might be the distance, and the mechanical skill which transported it five, or even one, would suffice for any number of miles.

In examining the ruins of western Thebes and reading the statements of ancient writers regarding the stupendous masses of granite conveyed by this people for several hundred miles our surprise is greatly increased. We find in the plain of Koorneh two colossi of Amunoph III., of a single block each, forty-seven feet in height, which contain about eleven thousand five hundred cubic feet, and are made of a stone not known within several days' journey of the place; and at the Memnonium is another of Remeses II., which when entire weighed upward of eight hundred and eighty-seven tons, and was brought from A'Sooan to Thebes, a distance, as before stated, of more than one hundred and thirty miles. This is certainly a surprising weight, and we cannot readily suggest the means adopted for its transport or its passage of the river; but the monolithic temple, said by Herodotus to have been taken from Elephantine to Buto, in the Delta, was still larger, and far surpassed in weight the pedestal of Peter the Great's statue at St. Petersburg, which last is calculated at about twelve hundred tons.

He also mentions a monolith at Sais, of which he gives the following account: "What I admire still more, is a monument of a single block of stone which Amasis transported from the city of Elephantine. Two thousand men, of the class of boatmen, were employed to bring it, and were occupied three years in this arduous task. The exterior length is twenty-one cubits (thirty-one and a half feet), the breadth fourteen (twenty-one feet) and the height eight (twelve feet), and within it measures eighteen cubits twenty digits (twenty-eight feet three inches) in length, twelve (eighteen feet) in breadth and five (seven and a half feet) in height. It lies near the entrance of the temple, not having been admitted into the building in consequence, as they say, of the engineer, while superintending the operation of dragging it forward, having sighed aloud, as if exhausted with fatigue and impatient of the time it had occupied, which being looked upon by Amasis as a bad omen, he forbade its being taken any farther. Some, however, state that it was in consequence of a man having been crushed beneath it while moving it with levers."

Herodotus' measurement is given as it lay on the ground; his length is properly its height and his height the depth from the front to the back; for judging from the usual form of these monolithic monuments, it was doubtless like that of the same king at Tel-et-Mai, the dimensions of which are twenty-one feet nine inches high, thirteen feet broad and eleven feet seven inches deep, and in-

ternally nineteen feet three inches, eight feet and eight feet three inches.

The weight of the Saite monolith cannot certainly be compared to that of the colossus of Remeses; but when we calculate the solid contents of the temple of Latona, at Buto, our astonishment is unbounded, and we are perplexed to account for the means employed to move a mass which, supposing the walls to have been only six feet thick—for Herodotus merely gives the external measurement of forty cubits, or sixty feet in height, breadth and thickness—must have weighed upward of six thousand or, at the lowest computation, five thousand tons.

The skill of the Egyptians was not confined to the mere moving of immense weights; their wonderful knowledge of mechanism is shown in the erection of obelisks and in the position of large stones raised to a considerable height and adjusted with the utmost precision, sometimes, too, in situations where the space will not admit the introduction of the inclined plane. Some of the most remarkable are the lintels and roofing-stones of the large temples; and the lofty doorway leading into the grand hall of assembly at Karnak is covered with sandstone blocks forty feet ten inches long and five feet two inches square.

In one of the quarries at A'Sooan (Syene) is a granite obelisk which, never having been finished or separated from the rock, remains in its original place. The depth of the quarry is so small and the entrance to it so narrow that it would have been impossible for them to turn the stone in order to remove it by that opening; they had therefore to lift it out of the hollow in which it had been cut; and this was the case with all the other shafts previously hewn in the same quarry. Such instances as these suffice to prove the wonderful mechanical knowledge of the Egyptians; and we may question whether our engineers could raise weights with the same facility without using some of those modern appliances which were quite unknown to that ancient people.

Pliny mentions several obelisks of very large dimensions, some of which were removed to Rome, where they now stand.

The Egyptians naturally looked on these monuments with feelings of veneration, being connected with their religion and the glorious memory of their monarchs, and at the same time perceived that in buildings constructed as their temples were the monotony of numerous horizontal lines required a relief of this kind; but the same feelings cannot influence others, and few motives can be assigned for their removal to Europe beyond the desire of possessing what requires great difficulty to obtain.

#### VIII. Funeral Rites.—Burial.—Embalming.—Sarcophagi.

The great care of the Egyptians was directed to their condition after death—that last state toward which their present life was only the pilgrimage; and they were taught to consider their abode here merely as an "inn" upon the road. They looked forward to being received into the company of that being who represented the divine Goodness, if pronounced worthy at the great judgment day, and the privilege of being called by his name was the fulfillment of all their wishes. Every one was then the same: all were "equally noble;" there was no distinction of rank beyond the tomb; and though their actions might be remembered on earth with gratitude and esteem, no king or conqueror was greater than the humblest man

after death; nor were any honors given to them as heroes. And if ceremonies were performed to the deceased, they were not in honor of a man translated to the order of the gods, but of that particular portion of the divine essence which constituted the soul of each individual, and returned to the Deity after death. Every one, therefore, whose virtuous life entitled him to admission into the regions of the blessed was supposed to be again united to the Deity, of whom he was an emanation; and with the emblem of Thmei, purporting that he was judged or justified, he received the holy name of Osiris. His body was so bound up as to resemble the mysterious ruler of Amenti or Hades; it bore some of the emblems peculiar to him; and the beard, of a form which belonged exclusively to the gods, was given to the deceased in token of his having assumed the character of that deity. Then again certain offerings were also made to the god Osiris himself, after the burial, in the name of the deceased; and certain services or liturgies were performed for him by the priests at the expense of the family, their number depending upon their means or the respect they were inclined to pay to the memory of their parent. If the sons or relations were of the priestly order, they had the privilege of officiating on these occasions, and the members of the family had permission and were perhaps frequently expected to be present whether the services were performed by strangers or by relations of the deceased. The ceremonies consisted of a sacrifice similar to those offered in the temples, vowed for the deceased to one or more gods (as Osiris, Anubis and others connected with Amenti); incense and libation were also presented, and a prayer was sometimes read, the relations and friends being present as mourners. They even joined their prayers to those of the priest; and embracing the mummified body and bathing its feet with their tears, they uttered those expressions of grief and praises of the deceased which were dictated by their feelings on so melancholy an occasion.

The priest who officiated at the burial service was selected from the grade of pontiffs who wore the leopard skin; but various other rites were performed by one of the minor priests to the mummies previous to their being lowered into the pit of the tomb, as well as after that ceremony. Indeed, they continued to be administered at intervals, as long as the family paid for their performance; and it is possible that upon the cessation of this payment, or after a stipulated time, the priests had the right of transferring the tomb to another family, which the inscriptions within them show to have been done, even though belonging to members of the priestly order.

When the mummies remained in the house, or in the chamber of the sepulchre, they were kept in movable wooden closets, with folding doors, out of which they were taken by the minor functionaries to a small altar, before which the priest officiated. The closet and the mummy were placed on a sledge, in order to facilitate their movement from one place to another; and the latter was drawn with ropes to the altar, and taken back by the same means when the ceremony was over. On these occasions, as in the prayers for the dead, they made the usual offerings of incense and libation, with cakes, flowers and fruit, and even anointed the mummy, oil or ointment being poured over its head. Sometimes several priests attended. One carried a napkin over his shoulder, to be used after the anointing of the mummy, another brought a papyrus roll containing a prayer, or the usual ritual deposited in the tombs with the dead,

and others had different occupations according to their respective offices.

These funeral oblations answer exactly to the *inferiæ* or *parentalia* of the Romans, consisting of victims, flowers and libations; when the tomb was decked with garlands and wreaths of flowers, and an altar was erected before it for presenting the offerings. And that this last was done also by the Egyptians is proved by the many small altars discovered outside the doors of the catacombs at Thebes.

It was not unusual to keep the mummies in the house, after they had been returned by the embalmers to the relations of the deceased, in order to gratify the feelings which made them desirous of having those they had loved in life as near them as possible after death; or to give time to the family to prepare a tomb for their reception. Many months often elapsed between the ceremony of embalming and the actual burial; and it was during this period that the liturgies were performed before the mummy, which were afterward continued at the tomb. One inscription upon the coffin of a woman shows that the burial took place a whole year after her death, and some were doubtless kept, for various reasons, much longer. It was during this interval that feasts were held in honor of the dead, to which the friends and relations were invited; as was customary among the Greeks and other people of antiquity.

Small tables made of reeds or sticks bound together, and interlaced with palm leaves, were sometimes placed in the tombs, bearing offerings of cakes, ducks or other things, according to the wealth or inclination of the donors; one of which, found at Thebes, is now in the British Museum. On the lower compartment, or shelf, are cakes, the central shelf has a duck, cut open at the breast and spread out, "but not divided asunder," and at the top is a similar bird, trussed in the usual mode when brought to an Egyptian table. Similar offerings "for the dead" were strictly forbidden by the law of Moses; and it was doubtless the Egyptian custom that the Hebrew legislator had in view when he introduced this wise prohibition.

Though the privilege of keeping a mummy in the house was sanctioned by law and custom, care was always taken to assign some plausible reason for it, since they deemed it a great privilege to be admitted to the repositories of the dead, as their final resting-place. To be debarred from the rites of burial reflected a severe disgrace upon the whole family; and the most influential individual could not be admitted to the very tomb he had built for himself, until acquitted before that tribunal which sat to judge his conduct during life.

The tombs of the rich consisted of one or more chambers, ornamented with paintings and sculpture, the plans and size of which depended on the expense incurred by the family of the deceased, or on the wishes of the individuals who purchased them during their lifetime. They were the property of the priests; and a sufficient number being always kept ready, the purchase was made at the "shortest notice," nothing being requisite to complete even the sculptures or inscriptions, but the insertion of the deceased's name, and a few statements respecting his family and profession. The numerous subjects representing agricultural scenes, the trades of the people, in short the various occupations of the Egyptians, were already introduced. These were common to all tombs, varying only in their details and the mode of their execution; and were intended as a short epitome of human life, which suited equally every future occupant.

In some instances all the paintings of the tomb were finished, and even the small figures representing the future occupant were introduced, those only being left unsculptured which being of a large size required more accuracy in the features in order to give his real portrait; and sometimes even the large figures were completed before the tomb was sold, the only parts left unfinished being the hieroglyphic legends containing his name and that of his wife. Indeed, the fact of their selling old mummy cases and tombs belonging to other persons shows that they were not always over-scrupulous about the likeness of an individual, provided the hieroglyphics were altered and contained his real name; at least when a motive of economy reconciled the mind of a purchaser to a second-hand tenement for the body of his friend. Those who could afford it bought a family tomb, but this was generally confined to the owner and his wife and their children.

Besides the upper rooms of the tomb, which were ornamented with the paintings already mentioned, were one or more pits, varying from twenty to seventy feet in depth; at the bottom or "sides" of which were recesses, like small chambers, for depositing the coffins, recalling the expression "whose tombs are in the side of the pit," and the metaphor, "going down to the pit," applied to death. And well might the verse of the Psalmist, "our bones are scattered at the grave's mouth, as when one cutteth and cleaveth wood upon the earth," accord with the state of many an Egyptian pit a few years ago; when, to the disgrace of Christian excavators, the Moslems were obliged to interfere, and bury the bones recklessly scattered by them over the ground.

The pit was closed with masonry after the burial had been performed, and sometimes reopened to receive other members of the family. The upper apartments were richly ornamented with painted sculptures, being rather a monument in honor of the deceased than the actual sepulchre, and they served for the reception of his friends, who frequently met there and accompanied the priests when performing the services for the dead. Each tomb, and sometimes each apartment, had a wooden door, either of a single or double valve, turning on pins and secured by bolts or bars with a lock; which last was protected by a seal of clay, upon which the impress of a signet was stamped when the party retired. Remains of the clay have even been found adhering to some of the stone jambs of the doorways, in the tombs of Thebes; and the numerous stamps buried near them were probably used on those occasions.

Similar seals were used for securing the doors of temples, houses and granaries.

Tombs were built of brick and stone, or hewn in the rock, according to the position of the necropolis. Whenever the mountains were sufficiently near, the latter was preferred, and these were generally the most elegant in their design, and in the variety of their sculptures, not only at Thebes, but in other parts of Egypt. Few, indeed, belonging to wealthy individuals were built of masonry, except those at the pyramids in the vicinity of Memphis. But Egyptian tombs were never circular, as many in Asia Minor, Etruria and Greece.

The sepulchres of the poorer classes had no upper chamber. The coffins were deposited in pits in the plain or in recesses excavated at the side of a rock, which were enclosed with masonry, like the pits within the large tombs. Mummies of the lower order were buried together in a common re-

pository, and the bodies of those whose relations had not the means of paying for their funeral, after being merely cleansed by some vegetable decoctions and kept in an alkaline solution for seventy days, were wrapped up in coarse cloth, in mats or in a bundle of palm sticks, and deposited in the earth.

Some tombs were of great extent; and when a wealthy individual bought the ground, and had an opportunity during a long life of making his family sepulchre according to his wishes, it was frequently decorated in the most sumptuous manner. And so much consequence did the Egyptians attach to them that people in humble circumstances made every effort to save sufficient to procure a handsome tomb and defray the expenses of a suitable funeral. This species of pomp increased as refinement and luxury advanced, and in the time of Amasis and other monarchs of the twenty-sixth dynasty the funeral expenses so far exceeded what it had been customary to incur during the reigns of the early Pharaohs that the tombs of some individuals far surpassed in extent, if not in splendor of decoration, those of the kings themselves.

Many adorned their entrances with gardens, in which flowers were reared by the hand of an attached friend, whose daily care was to fetch water from the river or from the wells on the edge of the cultivated land, and the remains of alluvial soil brought for this purpose may still be traced before some of the sepulchres at Thebes. Those tombs at Memphis and the pyramids which are of masonry differ in their plan, and in many instances in the style of their sculptures. The subjects, however, generally relate to the manners and customs of the Egyptians, and parties, boat scenes, fishing, fowling and other ordinary occupations of the people are portrayed there, as in the sepulchres at Thebes.

When any one died, all the females of his family, covering their heads and faces with mud, and leaving the body in the house, ran through the streets with their bosoms exposed, striking themselves and uttering loud lamentations. Their friends and relations joined them as they went, uniting in the same demonstrations of grief; and when the deceased was a person of consideration, many strangers accompanied them out of respect to his memory. Hired mourners were also employed to add by their feigned demonstrations of grief to the real lamentations of the family, and to heighten the show of respect paid to the deceased. The men, in like manner, girding their dress below their waist, went through the town smiting their breasts and throwing dust upon their heads; but the mourners consisted chiefly of women, as is usual in Egypt at the present day; and we may suggest "dust" rather than "mud" on a dry Egyptian road.

Of the magnificent pomp of a royal funeral in the time of the Pharaohs no adequate idea can be formed from the processions represented in the tombs of ordinary individuals; and from the marked distinction always maintained between the sovereign and the highest subjects in the kingdom, we may readily believe how greatly the funeral processions of the wealthiest individuals fell short of those of the kings. From the pomp of ordinary funerals, therefore, may be inferred the grand state in which the body of a sovereign was conveyed to the tomb.

"The Egyptians," according to Herodotus, "were the first to maintain that the soul of man is immortal; that after the death of the body it

## THE ANCIENT EGYPTIANS.

always enters into that of some other animal which is born; and when it has passed through all those of the earth, water and air, it again enters that of a man, which circuit it accomplishes in three thousand years." The doctrine of transmigration is mentioned by Plutarch, Plato and other ancient writers as the general belief among the Egyptians, and it was adopted by Pythagoras and his preceptor Pherecydes, as well as other philosophers of Greece.

Opinions varied respecting it; and some maintained that the soul passed through different bodies till it returned again to the human shape, and that all events which had happened were destined to occur again, after a certain period, in the identical order and manner as before. The same men were said to be born again, and to fulfill the same career, and the same causes were thought to produce the same effects, as stated by Virgil. This was termed *kuklos anankes*, "the circle (or orbit) of necessity."

It is even supposed that the Egyptians preserved the body in order to keep it in a fit state to receive the soul which once inhabited it, and that their tombs were decorated so richly in order to be ready for their owners on a future occasion. But this is contradicted by the fact of the tombs being sold to later occupants, and by animals being also embalmed, the preservation of whose bodies was not ascribable to any idea connected with the soul; and the custom arose rather from a sanitary regulation for the benefit of the living, and from that feeling of respect for the dead which is common to all men.

And since it is distinctly shown that all virtuous men became "Osiris," and returned again to the good being whence their souls emanated, their coming to earth again at any period is improbable; and the bad alone were condemned to that degradation, going through a state of purgatory by passing into the bodies of animals. This, which accords with the belief of the Hindoos, is more consistent with what we know of the notions of the Egyptians; and there is reason to believe from the monuments that the souls which underwent transmigration were those of men whose sins were of a sufficiently moderate kind to admit of that purification, the unpardonable sinner being condemned to eternal fire. The Buddhists have the same notion of the soul of man passing into the bodies of animals; and even the Druids believed in the migration of the soul, though they confined it to human bodies.

The judgment scenes, found in the tombs and on the papyri, sometimes represent the deceased conducted by Horus alone, or accompanied by his wife, to the region of Amenti. Cerberus is present as the guardian of the gates, near which the scales of justice are erected; and Anubis, "the director of the weight," having placed a vase representing the good actions or the heart of the deceased in one scale, and the figure or emblem of truth in the other, proceeds to ascertain his claims for admission. If on being "weighed" he is "found wanting," he is rejected; and Osiris, the judge of the dead, inclining his sceptre in token of condemnation, pronounces judgment upon him, and condemns his soul to return to earth under the form of a pig, or some other unclean animal. Placed in a boat, it is removed, under the charge of two monkeys, from the precincts of Amenti, all communication with which is figuratively cut off by a man who hews away the earth with an axe after its passage; and the commencement of a new term of life is indicated by those monkeys, the emblems

of Thoth, as Time. But if, when the sum of his deeds has been recorded, his virtues so far predominate as to entitle him to admission to the mansions of the blessed, Horus, taking in his hand the tablet of Thoth, introduces him to the presence of Osiris, who, in his palace, attended by Isis and Nephthys, sits on his throne in the midst of the waters, from which rises the lotus, bearing upon its expanded flower the four genii of Amenti.

Other representations of this subject differ in some of the details; and in the judgment scene of the royal scribe, whose funeral procession has been described, the deceased advances alone in the attitude of prayer to receive judgment. On one side of the scales stands Thoth, holding a tablet in his hands; on the other the goddess of justice; and Horus, in lieu of Anubis, performs the office of director of the balance, on the top of which sits a cynocephalus, the emblem of Thoth. Osiris, seated as usual on his throne, holding his crook and flagellum, awaits the report from the hands of his son Horus. Before the door of his palace are the four genii of Amenti, and near them three deities, who either represent the assessors, or may be the three assistant judges who gave rise to the Minos, Æacus and Rhadamanthus of Greek fable. In these the Min and Amenti are very Egyptian.

Another, figured in the side adytum of the Ptolemaic temple of Dayr el Medeneh, at Thebes, represents the deceased approaching in a similarly submissive attitude, between two figures of truth or justice, whose emblem, the ostrich feather, he holds in his hand. The two figures show the double capacity of that goddess, corresponding to the Thumminim, or "two truths," and according well with the statement of Diodorus respecting her position "at the gates of truth." Horus and Anubis superintend the balance, and weigh the actions of the judge; whilst Thoth inscribes them on his tablet, which he prepares for presentation to Osiris, who, seated on his throne, pronounces the final judgment, permitting the virtuous soul to enjoy the blessings of eternal felicity. Before him four genii of Amenti stand upon a lotus flower; and a figure of Harpocrates, seated on the crook of Osiris between the scales and the entrance of the divine abode, which is guarded by Cerberus, is intended to show that the deceased on admission to that pure state must be born again, and commence a new life, cleansed from all the impurities of his earthly career. It also represents the idea, common to the Egyptians and other philosophers, that to die was only to assume a new form, that nothing was annihilated, and that dissolution was merely the forerunner of reproduction. Above, in two lines, sit the forty-two assessors, the complete number mentioned by Diodorus, whose office was to assist in judging the dead.

Many similar subjects occur on funeral monuments, few of which present any new features. One, however, is singular, from the goddess of justice being herself engaged in weighing the deceased, in the presence of Thoth, who is represented under the form of a cynocephalus, having the horns and globe of the moon upon its head, and a tablet in its hand. Instead of the usual vase, the figure of the deceased himself is placed in one of the scales, opposed to that of the goddess; and close to the balance sits Cerberus with open mouth, ready to perform his office of "devourer of the wicked."

Another may also be noticed, from the singular fact of the goddess of justice, who here introduces the deceased, being without a head, as described by Diodorus; from the deceased holding in each

hand an ostrich feather, the emblem of truth; and from Cerberus being represented standing upon the steps of the divine abode of Osiris, as if in the act of announcing the arrival of Thoth with the person of the tomb.

Sometimes the deceased wore round his neck the same vase, which in the scales typified his good actions, or bore on his head the ostrich of truth. They were both intended to show he had been deemed worthy of admission to the mansions of the just, and in the same idea originated the custom of placing the name of the goddess after that of virtuous individuals who were dead, implying that they were "judged" or "justified."

The goddesses Athor and Netpe, in their respective trees, the persea and sycamore fig, frequently presented the virtuous after death with the fruit and drink of heaven, which call to mind the ambrosia and nectar of Greek fable.

The foregoing sections present an ample picture of the civilization of the ancient Egyptians, so minute that an attentive reader may have a correct understanding of nearly all the details of Egyptian life. The learned work of Wilkinson, from which this portraiture is condensed, is of much value because of the pictorial illustration which it contains, for the fact is one of the most remarkable in the literature of the world that the Egyptians portrayed on their public monuments almost every incident of life, whether of the occurrences of their households, of their kings, priests, battles, sieges, agriculture or religion. All were depicted, and owing to the climate these records remain. It is true that the wars and devastations which have made Egypt what it now is have ruined many of these records; still, they remain in wonderful abundance, and hence from that source and from the records of Greek and Roman literature that have come down to us, we are enabled to comprehend very fully the details of Egyptian life. The student who desires to behold the forms of the various objects in use among the ancient Egyptians, may consult the illustrations in this work, where he will find them exhibited precisely as they appear on the monuments of Egypt.

The custom of embalming bodies was not confined to the Egyptians; the Jews adopted this process to a certain extent, "the manner of the Jews" being to bury the body "wound in linen clothes with spices," as Lazarus was swathed with bandages.

The embalmers were probably members of the medical profession, as well as of the class of priests. Joseph is said to have "commanded the physicians to embalm his father," and Pliny states that during this process certain examinations took place which enabled them to study the disease of which the deceased had died. They appear to have been made in compliance with an order from the government, as he says the kings of Egypt had the bodies opened after death to ascertain the nature of their diseases, by which means alone the remedy for phthisical complaints was discovered.

Certain regulations respecting the bodies of persons found dead were wisely established in Egypt, which, by rendering the district or town in the immediate vicinity responsible in some degree for the accident by fining it to the full cost of the most expensive funeral, necessarily induced those in authority to exercise a proper degree of vigilance, and to exert their utmost efforts to save any one who had fallen into the river or was otherwise exposed to the danger of his life. From these too we may judge of the great responsibility

they were under for the body of a person found murdered within their jurisdiction.

As soon as the intestines had been removed from the body they were properly cleansed, and embalmed in spices and various substances and deposited in four vases. These were afterward placed in the tomb with the coffin, and were supposed to belong to the four genii of Amenti, whose heads and names they bore. Each contained a separate portion. The vase, with a cover representing the human head of Amset, held the stomach and large intestines; that with the cynocephalus head of Hapi contained the small intestines; in that belonging to the jackal-headed Smaut were the lungs and heart; and for the vase of the hawk-headed Kebhnsnof were reserved the gall-bladder and the liver. They differed in size and the materials of which they were made. The most costly were of Oriental alabaster, from ten to twenty inches high, and about one-third that in diameter, each having its inscription, with the name of the particular deity whose head it bore. Others were of common limestone, and even of wood; but these last were generally solid, or contained nothing, being merely emblematic and intended only for those whose intestines were returned into the body. They were generally surmounted by the heads above mentioned, but they sometimes had human heads; and it is to these last more particularly that the name of Canopi has been applied, from their resemblance to certain vases made by the Romans to imitate the Egyptian taste. It need scarcely be added that this is a misnomer, and that the application of the word Canopus to any Egyptian vase is equally inadmissible.

Such was the mode of preserving the internal parts of the mummies embalmed according to the most expensive process. And so careful were the Egyptians to show proper respect to all that belonged to the human body that even the sawdust of the floor where they cleansed it was taken and tied up in small linen bags, which, to the number of twenty or thirty, were deposited in vases and buried near the tomb.

The classification of "Egyptian mummies," and the different modes of embalming, are usually arranged under these general heads:

I. Those with the ventral incision.

II. Those without any incision.

1. Of the mummies with the incision are—

1. Those preserved by balsamic matter.

2. Those preserved by natron.

1. Those dried by balsamic and astringent substances are either filled with a mixture of resin and aromatics, or with asphaltum and pure bitumen.

When filled with resinous matter, they are of an olive color; the skin dry, flexible and as if tanned, retracted and adherent to the bones. The features are preserved and appear as during life. The belly and chest are filled with resins, partly soluble in spirits of wine. These substances have no particular odor by which they can be recognized; but when thrown upon hot coals, a thick smoke is produced, giving out a strong aromatic smell. Mummies of this kind are dry, light and easily broken, with the teeth, hair of the head and eyebrows well preserved. Some of them are gilt on the surface of the body, others only on the face or the sexual parts, or on the head and feet.

2. The mummies with ventral incisions, prepared by natron, are likewise filled with resinous substances, and also asphaltum. The skin is hard and elastic; it resembles parchment, and does not

adhere to the bones. The resins and bitumen injected into these mummies are little friable and give out no odor. The countenance of the body is little altered, but the hair is badly preserved; what remains usually falls off upon being touched. These mummies are very numerous; and if exposed to the air, they become covered with an efflorescence of sulphate of soda. They readily absorb humidity from the atmosphere.

1. Mummies of which the intestines were deposited in vases.

2. Those of which the intestines were returned into the body.

The former included all mummies embalmed according to the most expensive process (for though some of an inferior quality are found with the incision in the side, none of the first quality were embalmed without the removal of the intestines); and the body, having been prepared with the proper spices and drugs, was enveloped in linen bandages, sometimes measuring one thousand yards in length. It was then enclosed in a cartonnage fitting closely to the mummified body, which was richly painted, and covered in front with a network of beads and bugles arranged in a tasteful form, the face being laid over with thick gold-leaf and the eyes made of enamel. The three or four cases which successively covered the cartonnage were ornamented in like manner with painting and gilding; and the whole was enclosed in a sarcophagus of wood or stone, profusely charged with painting or sculpture. The bodies thus embalmed were generally of priests of various grades. Sometimes the skin itself was covered with gold-leaf, sometimes the whole body, the face or the eyelids, sometimes the nails alone. In many instances the body or the cartonnage was beautified in an expensive manner, and the outer cases were little ornamented, but some preferred the external show of rich cases or sarcophagi.

II. Those without the ventral incision were also of two kinds:

1. Salted, and filled with bituminous matter less pure than the others.

2. Simply salted.

(1.) The former mummies are not recognizable; all the cavities are filled, and the surface of the body is covered with thin mineral pitch. It penetrates the body, and forms with it one undistinguishable mass. They are the most numerous of all kinds; they are black, dry, heavy and of disagreeable odor, and very difficult to break. Neither the eyebrows nor hair are preserved, and there is no gliding upon them. The bituminous matter is fatty to the touch, less black and brittle than the asphaltum, and yields a very strong odor.

(2.) The mummies simply salted and dried are generally worse preserved than those filled with resins and bitumen. Their skin is dry, white, elastic, light, yielding no odor and easily broken, and masses of adipocere are frequently found in them. The features are destroyed, the hair is entirely destroyed, the bones are detached from their connections with the slightest effort, and they are white like those of a skeleton. The cloth enveloping them falls to pieces upon being touched. These mummies are generally found in particular caves which contain great quantities of saline matters, principally the sulphate of soda.

It has been a general and a just remark that few mummies of children have been discovered—a singular fact, not easily accounted for, since the custom of embalming those even of the earliest age was practiced in Egypt.

## MOHAMMEDANISM: ITS ORIGIN AND DEVELOPMENT.

### I. Of the Arabs before Mohammed, or, as they Express it, in the Time of Ignorance.—Their History, Religion, Learning and Customs.

THE history of the Christian Church cannot well be narrated without noticing the rise and progress of the system taught by the false prophet of Arabia. Mohammedanism spread with amazing rapidity; swept away the professors of the gospel from whole regions, and though a scheme of, monstrous delusion reassured some great principles well-nigh suppressed by superstition in the Church. Nor can it be regarded as a temporary effervescence of fanaticism, for after the lapse of twelve centuries it retains the ascendancy over a large section of the family of man. It is needful in the outset to refer to the country and the people where the system introduced by Mohammed originated, and whence it spread to other lands.

The declension of Christianity from apostolic purity in the East must be known before the reader can understand the causes of Mohammed's success. This subject is expounded in the preliminary discourse to Sale's edition of the Koran, the substance of which is given in this article.

The name of Arabia (used in a more extensive sense) sometimes comprehends all that large tract of land bounded by the river Euphrates, the Persian Gulf, the Sindian, Indian and Red Seas, and part of the Mediterranean, above two-thirds of which country—that is, Arabia, properly so called—the Arabs have possessed almost from the flood, and have made themselves masters of the rest, either by settlements or continual incursions, for which reason the Turks and Persians at this day call the whole Arabistan or the country of the Arabs.

But the limits of Arabia, in its more usual and proper sense, are much narrower, as reaching no farther northward than the isthmus which runs from Aila to the head of the Persian Gulf and the borders of the territory of Cufa, which tract of land the Greeks nearly comprehended under the name of Arabia the Happy. The Eastern geographers make Arabia Petrea to belong partly to Egypt and partly to Sham or Syria, and the desert of Arabia they call the deserts of Syria.

Proper Arabia is by the Oriental writers generally divided into five provinces, viz., Yaman, Hejaz, Tehama, Najd and Yamama, to which some add Bahrein as a sixth, but this province the more exact make part of Irak; others reduce them all to two, Yaman and Hejaz, the last including the three other provinces of Tehama, Najd and Yamama.

The province of Yaman extends itself along the Indian Ocean from Aden to Cape Rasalgat; part of the Red Sea bounds it on the west and south sides, and the province of Hejaz on the north. It is subdivided into several lesser provinces, as Hadramaut, Shihr, Oman, Najran, etc., of which Shihr alone produces the frankincense.

The metropolis of Yaman is Sanaa, a very ancient city, and much celebrated for its delightful situation, but the prince at present resides about five leagues northward, at a place no less pleasant, called Hish almawaheb, or the Castle of Delights.

This country has been famous from all antiquity for the happiness of its climate, its fertility and richness. The delightfulness and plenty of Yaman are owing to its mountains, for all that part which lies along the Red Sea is a dry, barren desert, in some places ten or twelve leagues over, but in return bounded by those mountains, which, being well watered, enjoy an almost continual spring, and besides coffee, the peculiar produce of this country, yield great plenty and variety of fruits, and in particular excellent corn, grapes and spices. There are no rivers of note in this country, for the streams which at certain times of the year descend from the mountains seldom reach the sea, being for the most part drunk up and lost in the burning sands of that coast.

The province of Hejaz is bounded on the south by Yaman and Tehama, on the west by the Red Sea, on the north by the deserts of Syria, and on the east by the province of Najd. This province is famous for its two chief cities, Mecca and Medina, one of which is celebrated for its temple and having given birth to Mohammed, and the other for being the place of his residence for the last ten years of his life and of his interment.

Mecca is certainly one of the most ancient cities in the world. It is seated in a stony and barren valley, surrounded on all sides with mountains. The length of Mecca from south to north is about two miles, and its breadth, from the foot of the mountain Ajjad to the top of another called Koalkan, about a mile. In the midst of this space stands the city, built of stone cut from the neighboring mountains. There being no springs at Mecca, at least none but what are bitter and unfit to drink, the inhabitants are obliged to use rain-water, which they catch in cisterns. But this not being sufficient, several attempts were made to bring water thither from other places by aqueducts, and particularly about Mohammed's time; Zobair, one of the principal men of the tribe of Koreish, endeavored at a great expense to supply the city with water from Mount Arafat, but without success, yet this was effected not many years ago, being begun at the charge of a wife of Soliman, the Turkish emperor. But long before this another aqueduct had been made from a spring at a considerable distance, which was after several years' labor finished by the khalif al Moktader.

The soil about Mecca is so very barren as to produce no fruits but what are common in the deserts. Having therefore no corn or grain of their own growth, they are obliged to fetch it from other places; and Hashem, Mohammed's great-grandfather, then prince of his tribe, the more effectually to supply them with provisions, appointed two caravans to set out yearly for that purpose, the one

in summer and the other in winter: these caravans of purveyors are mentioned in the Koran. The provisions brought by them were distributed also twice a year, viz., in the month of Rajeb and at the arrival of the pilgrims. They are supplied with dates in great plenty from the adjacent country, and with grapes from Tayef, about sixty miles distant, very few growing at Mecca. The inhabitants of this city are generally very rich, being considerable gainers by the prodigious concourse of people of almost all nations at the yearly pilgrimage, at which time there is a great fair or mart for all kinds of merchandise. They have also great numbers of cattle, and particularly of camels: however, the poorer sort cannot but live very indifferently in a place where almost every necessary of life must be purchased with money. Notwithstanding this great sterility near Mecca, yet you are no sooner out of its territory than you meet on all sides with plenty of good springs and streams of running water, with a great many gardens and cultivated lands.

Medina is a walled city about half as big as Mecca, built in a plain, salt in many places, yet tolerably fruitful, particularly in dates. Here lies Mohammed interred in a magnificent building covered with a cupola and adjoining to the east side of the great temple, which is built in the midst of the city.

The province of Tehama was so named from the vehement heat of its sandy soil; it is bounded on the west side by the Red Sea, and on the other sides by Hejaz and Yaman, extending almost from Mecca to Aden.

The province of Najd, which word signifies a rising country, lies between those of Yamama, Yaman and Hejaz, and is bounded on the east by Irak.

The province of Yamama is surrounded by the provinces of Najd, Tehama, Bahrein, Oman, Shihr, Hadramaut and Saba. The chief city is Yamama, which gives name to the province; it is particularly famous for being the residence of Mohammed's competitor, the false prophet, Moselama.

The Arabians are distinguished by their own writers into two classes, viz., the old lost Arabians and the present.

The former were very numerous, and divided into several tribes which are now all destroyed or else lost and swallowed up among the other tribes.

The most famous tribes amongst these ancient Arabians were Ad, Thamud, Tasm, Jadis, the former Jorham and Amalek.

The tribe of Ad were descended from Ad, the son of Aws, the son of Aram, the son of Sem, the son of Noah, who after the confusion of tongues settled in al Abkaf, in the province of Hadramaut, where his posterity greatly multiplied. Their first king was Shedad, the son of Ad, of whom the Eastern writers deliver many fabulous things, particularly that he finished the magnificent city his

father had begun, wherein he built a fine palace adorned with delicious gardens, to embellish which he spared neither cost nor labor, purposing thereby to create in his subjects a superstitious veneration of himself as a god.

The descendants of Ad in process of time falling from the worship of the true God into idolatry, God sent the prophet Hud (who is generally agreed to be Heber) to preach to and reclaim them. But they refusing to acknowledge his mission or to obey him, God sent a hot and suffocating wind which blew seven nights and eight days together, and entering at their nostrils, passed through their bodies and destroyed them all, a very few only excepted, who had believed in Hud, and retired with him to another place. That prophet afterward returned into Hadramaut and was buried near Hasee, where there is a small town now standing called Kabr Hud or the sepulchre of Hud.

The tribe of Thamud were the posterity of Thamud, the son of Gather, the son of Aram, who falling into idolatry, the prophet Saleh was sent to bring them back to the worship of the true God. This prophet lived between the time of Hud and of Abraham, and therefore cannot be the same with the patriarch Saleh, as M. d'Herbelot imagines. The learned Bochart with more probability takes him to be Phaleg. A small number of the people of Thamud hearkened to the remonstrances of Saleh, but the rest requiring as a proof of his mission that he should cause a she camel big with young to come out of a rock in their presence, he accordingly obtained it of God, and the camel was immediately delivered of a young one ready weaned; but they, instead of believing, cut the hamstrings of the camel and killed her, at which act of impiety God, being highly displeased, three days after struck them dead in their houses by an earthquake, and a terrible noise from heaven, which some say was the voice of Gabriel, the archangel, crying aloud, Die, all of you! Saleh, with those who were reformed by him, was saved from this destruction, the prophet going into Palestine, and from thence to Mecca, where he ended his days.

This tribe first dwelt in Yaman; but being expelled thence by Hamyar, the son of Seba, they settled in the territory of Hejr, in the province of Hejaz, where their habitations cut out of the rocks, mentioned in the Koran, are still to be seen, and also the crack of the rock whence the camel issued, which, as an eye witness hath declared, is sixty cubits wide. These houses of the Thamudites, being of the ordinary proportion, are used as an argument to convince those of a mistake who make this people to have been of a gigantic stature.

The tragical destructions of these two potent tribes are often insisted on in the Koran as instances of God's judgment on obstinate unbelievers.

The tribe of Tasm were the posterity of Lud, the son of Sem, and Jadis of the descendants of Jether. These two tribes dwelt promiscuously together under the government of Tasm, till a certain tyrant made a law that no maid of the tribe of Jadis should marry unless first deflowered by him, which the Jadians not enduring, formed a conspiracy, and inviting the king and chiefs of Tasm to an entertainment, privately hid their swords in the sand, and in the midst of their mirth fell on them and slew them all, and extirpated the greatest part of the tribe; however, the few who escaped obtaining aid of the king of Yaman, then (as is said) Dhu Habshan Ebn Akrau, assaulted the

Jadis and utterly destroyed them, there being scarce any mention made from that time of either of these tribes.

The former tribe of Jorham was contemporary with Ad, and utterly perished. The tribe of Amalek were descended from Amalek, the son of Eliphaz, the son of Esau. The posterity of this person rendered themselves very powerful, and before the time of Joseph conquered the lower Egypt under their king Walid, the first who took the name of Pharaoh, as the Eastern writers tell us, seeming by these Amalekites to mean the same people which the Egyptian histories call Phœnician shepherds. But after they had possessed the throne of Egypt for some descents, they were expelled by the natives, and at length totally destroyed by the Israelites.

The present Arabians, according to their own historians, are sprung from two stocks, Kahtan, the same with Joctan, the son of Eber, and Adnan, descended in a direct line from Ishmael, the son of Abraham and Hagar; the posterity of the former they call al Arab al Ariba—i. e., the genuine or pure Arabs—and those of the latter al Arab al mostareba—i. e., naturalized or insitutions Arabs.

The posterity of Ishmael have no claim to be admitted as pure Arabs, their ancestor being by origin and language an Hebrew; but having made an alliance with the Jorhamites by marrying a daughter of Modad, and accustomed himself to their manner of living and language, his descendants became blended with them into one nation. The uncertainty of the descents between Ishmael and Adnan is the reason why they seldom trace their genealogies higher than the latter, whom they acknowledge as father of their tribes, the descents from him downward being pretty certain and uncontroverted.

Besides these tribes of Arabs, mentioned by their own authors, who were all descended from the race of Shem, others of them were the posterity of Ham by his son Cnsh, which name is in Scripture constantly given to the Arabs and their country, though our version renders it Ethiopia; but strictly speaking, the Cushites did not inhabit Arabia properly so called, but the banks of the Euphrates and the Persian Gulf, whither they came from Chuzestan or Susiana, the original settlement of their father. They might probably mix themselves in process of time with the Arabs of the other race, but the Eastern writers take little or no notice of them.

The Arabians were for some centuries under the government of the descendants of Kahtan, Yarab, one of his sons, founding the kingdom of Yaman, and Jorham, another of them, that of Hejaz.

The province of Yaman was governed by princes of the tribe of Hamyar, though at length the kingdom was translated to the descendants of Cahlan, his brother, who yet retained the title of king of Hamyar, and had all of them the general title of Tobba, which signifies successor, and was affected to this race of princes, as that of Cæsar was to the Roman emperors and khalif to the successors of Mohammed. There were several lesser princes who reigned in other parts of Yaman, and were mostly subject to the king of Hamyar, whom they called the great king.

The first great calamity that befell the tribes settled in Yaman was the inundation of Aram, which happened soon after the time of Alexander the Great. No less than eight tribes were forced to abandon their dwellings upon this occasion, some of which gave rise to the two kingdoms of

Ghassan and Hira. And this was probably the time of the migration of those tribes or colonies which were led into Mesopotamia by three chiefs, Beer, Modar and Rabia, from whom the three provinces of that country are still named, Diyar Beer, Diyar Modar and Diyar Rabia.

The tribes which remained in Yaman after this terrible devastation still continued under the obedience of the former princes till about seventy years before Mohammed, when the king of Ethiopia sent over forces to assist the Christians of Yaman against the cruel persecution of their king Dhu Nowas, a bigoted Jew, whom they drove to that extremity that he forced his horse into the sea, and so lost his life and crown, after which the country was governed by four Ethiopian princes successively till Seif, the son of Dhu Yazan, of the tribe of Hamyar, obtaining succors from Khosru Anushirwan, king of Persia, which had been denied him by the emperor Heraclius, recovered the throne and drove out the Ethiopians, but was himself slain by some of them who were left behind. The Persians appointed the succeeding princes till Yaman fell into the hands of Mohammed, to whom Bazan, or rather Badhan, the last of them, submitted, and embraced his new religion.

This kingdom of the Hamyarites is said to have lasted two thousand and twenty years, or, as others say, above three thousand, the length of the reign of each prince being very uncertain.

It has been already observed that two kingdoms were founded by those who left their country on occasion of the inundation of Aram. They were both out of the proper limits of Arabia. One of them was the kingdom of Ghassan. The founders of this kingdom were of the tribe of Azd, who, settling in Syria Damascus near a water called Ghassan, thence took their name and drove out the Dejaanin Arabs of the tribe of Salih, who before possessed the country, where they maintained their kingdom four hundred years, as others say six hundred, or, as Abulfeda more exactly computes, six hundred and sixteen. Five of these princes were named Hareth, which the Greeks write Aretas, and one of them it was whose governor ordered the gates of Damascus to be watched to take St. Paul. This tribe were Christians, their last king being Jabalah, the son of al Ayham, who, on the Arabs' successes in Syria, professed Mohammedanism under the khalif Omar, but receiving a disgust from him, returned to his former faith and retired to Constantinople.

The other kingdom was that of Hira, which was founded by Malec of the descendants of Cahlan in Chaldaea or Irak, but after three descents the throne came by marriage to the Lakhmians, called also the Mondars (the general name of those princes), who preserved their dominion, notwithstanding some small interruption by the Persians, till the khalifat of Abubeer, when al Mondar al Maghrur, the last of them, lost his life and crown by the arms of Khaled Ebn al Walid. This kingdom lasted six hundred and twenty-two years eight months. Its princes were under the protection of the kings of Persia, whose lieutenants they were over the Arabs of Irak, as the kings of Ghassan were for the Roman emperors over those of Syria.

Jorham, the son of Kahtan, reigned in Hejaz, where his posterity kept the throne till the time of Ishmael, but on his marrying the daughter of Modad, by whom he had twelve sons, Kidar, one of them, had the crown resigned to him by his uncles, the Jorhamites, though others say the de-

scendants, of Ishmael expelled that tribe, who, retiring to Johainah, were, after various fortune, at last all destroyed by an inundation.

After the expulsion of the Jorhamites, the government of Hejaz seems not to have continued for many centuries in the hand of one prince, but to have been divided among the heads of tribes. At Mecca an aristocracy prevailed, where the chief management of affairs till the time of Mohammed was in the tribe of Koreish, especially after they had gotten the custody of the Caaba from the tribe of Khozaah.

After the time of Mohammed, Arabia was for about three centuries under the khalifs, his successors; but in the year 325 of the Hejra a great part of that country was in the hands of the Karmatians, a new sect who had committed great outrages and disorders even in Mecca, and to whom the khalifs were obliged to pay tribute, that the pilgrimage thither might be performed. Afterward Yaman was governed by the house of Thalebata, descended from Ali, the son-in-law of Mohammed, whose sovereignty in Arabia some place so high as the time of Charlemagne. The present reigning family in Yaman is probably that of Ayub, a branch of which reigned there in the thirteenth century and took the title of khalif and imam, which they still retain. They are not possessed of the whole province of Yaman, there being several other independent kingdoms there, particularly that of Fartach. The crown of Yaman descends not regularly from father to son, but the prince of the blood royal who is most in favor with the great ones or has the strongest interest generally succeeds.

The governors of Mecca and Medina, who have always been of the race of Mohammed, also threw off their subjection to the khalifs, since which time four principal families, all descended from Hasan, the son of Ali, have reigned there under the title of sharif, which signifies noble, as they reckon themselves to be on account of their descent. These are Banu Kader, Banu Musa Thani, Banu Hashem and Banu Kitada; which last family now is, or lately was, in the throne of Mecca, where they have reigned above five hundred years. The reigning family at Medina are the Banu Hashem, who also reigned at Mecca before those of Kitada.

The kings of Yaman, as well as the princes of Mecca and Medina, are absolutely independent, and not at all subject to the Turk. These princes, often making cruel wars among themselves, gave an opportunity to Selim I. and his son Soliman to make themselves masters of the coasts of Arabia on the Red Sea and of part of Yaman by means of a fleet built at Sues; but their successors have not been able to maintain their conquests, for, except the port of Jadda, where they have a basha whose authority is very small, they possess nothing considerable in Arabia.

Thus have the Arabs preserved their liberty, of which few nations can produce so ancient monuments, with very little interruption, from the very deluge; for though very great armies have been sent against them, all attempts to subdue them were unsuccessful. The Assyrian or Median empires never got footing among them. The Persian monarchs, though they were their friends and so far respected by them as to have an annual present of frankincense, yet could never make them tributary, and were so far from being their masters that Cambyse, on his expedition against Egypt, was obliged to ask their leave to pass through their territories; and when Alexander had sub-

dued that mighty empire, yet the Arabians had so little apprehension of him that they alone of all the neighboring nations sent no ambassadors to him, either first or last, which, with a desire of possessing so rich a country, made him form a design against it; and had he not died before he could put it in execution, this people might possibly have convinced him that he was not invincible. The Romans never conquered any part of Arabia properly so called; the most they did was to make some tribes in Syria tributary to them, as Pompey did one commanded by Sampsiceramus or Shams' alkeram, who reigned at Hems or Emesa. But none of the Romans, or any other nations that we know of, ever penetrated so far into Arabia as Aelius Gallus under Augustus Cæsar; yet he was so far from subduing it, as some authors pretend, that he was soon obliged to return without effecting anything considerable, having lost the best part of his army by sickness and other accidents. This ill success probably discouraged the Romans from attacking them any more; for Trajan, notwithstanding the flatteries of the historians and orators of his time, and the medals struck by him, did not subdue the Arabs, the province of Arabia, which it is said he added to the Roman empire, scarce reaching farther than Arabia Petraea, or the very skirts of the country. And we are told by one author that this prince, marching against the Agarens, who had revolted, met with such a reception that he was obliged to return without doing anything.

The religion of the Arabs before Mohammed, which they call the state of ignorance, in opposition to the knowledge of God's true worship revealed to them by their prophet, was chiefly gross idolatry, the Sabian religion having almost overrun the whole nation, though there were also great numbers of Christians, Jews and Magians among them.

The idolatry of the Arabs, as Sabians, chiefly consisted in worshipping the fixed stars and planets and the angels and their images, which they honored as inferior deities, and whose intercession they begged, as their mediators with God; for the Arabs acknowledged one supreme God, the Creator and Lord of the universe, whom they call Allah Taala, the most high God, and their other deities, who were subordinate to him, they called simply al Ilaahat—i. e., the goddesses; which words the Grecians not understanding, and it being their constant custom to resolve the religion of every other nation into their own and find out gods of theirs to match the others, they pretend that the Arabs worshiped only two deities, Orotalt and Alilat, as those names are corruptly written, whom they will have to be the same with Bacchus and Urania, pitching on the former as one of the greatest of their own gods and educated in Arabia, and on the other because of the veneration shown by the Arabs to the stars.

That they acknowledged one supreme God appears, to omit other proof, from their usual form of addressing themselves to him, which was this: "I dedicate myself to thy service, O God! I dedicate myself to thy service, O God! Thou hast no companion except thy companion of whom thou art absolute master, and of whatever is his." So that they suppose the idols not to be *sui juris*, though they offered sacrifices and other offerings to them as well as to God, who was also often put off with the least portion, as Mohammed upbraids them. Thus, when they planted fruit trees or sowed a field they divided it by a line into two parts, setting one apart for their idols and the

other for God; if any of the fruits happened to fall from the idol's part into God's, they made restitution, but if from God's part into the idol's, they made no restitution. So when they watered the idol's grounds, if the water broke over the channels made for that purpose and ran on God's part, they dammed it up again, but if the contrary, they let it run on, saying they wanted what was God's, but he wanted nothing. In the same manner, if the offering designed for God happened to be better than that designed for the idol, they made an exchange, but not otherwise.

It was from this gross idolatry, or the worship of inferior deities or companions of God, as the Arabs continue to call them, that Mohammed reclaimed his countrymen, establishing the sole worship of the true God among them, so that, how much soever the Mohammedans are to blame in other points, they are far from being idolaters, as some ignorant writers have pretended.

The worship of the stars the Arabs might easily be led into from their observing the changes of weather to happen at the rising or setting of certain of them, which, after a long course of experience, induced them to ascribe a divine power to those stars and to think themselves indebted to them for their rains, a very great benefit and refreshment to their parched country. This superstition the Koran particularly takes notice of.

The ancient Arabians and Indians, between which two nations was a great conformity of religions, had seven celebrated temples, dedicated to the seven planets, one of which in particular, called Beit Ghondan, was built in Sanaa, the metropolis of Yaman, by Dahac, to the honor of al Zoharah, or the planet Venus, and was demolished by the khalif Othman, by whose murder was fulfilled the prophetic inscription set, as is reported, over his temple, viz., Ghomidan, he who destroyeth thee shall be slain. The temple of Mecca is also said to have been consecrated to Zohal, or Saturn.

Though these deities were generally revered by the whole nation, yet each tribe chose some one as the more popular object of their worship.

Thus, as to the stars and planets, the tribe of Hamyar chiefly worshipped the sun; Misam, al Dabaran or the bull's eye; Lakhm and Jodam, al Moshitari or Jupiter; Tay, Sohail or Canopus; Kais, Sirius or the dog-star; and Asad, Otared or Mercury.

Of the angels or intelligences which they worshipped, the Koran makes mention only of three, which were worshipped under female names, Allat, al Uzza and Manah. These were by them called goddesses, and the daughters of God—an appellation they gave not only to the angels, but also to their images, which they either believed to be inspired with life by God, or else to become the tabernacles of the angels, and to be animated by them; and they gave them divine worship, because they imagined they interceded for them with God.

There were five more idols, which, with the former three, are all that the Koran mentions by name, and they are Wadd, Sawa, Yaghuth, Yauk and Nasr. These are said to have been antediluvian idols, which Noah preached against, and were afterward taken by the Arabs for gods, having been men of great merit and piety in their time, whose statues they revered at first with a civil honor only, which in process of time became heightened to a divine worship.

Wadd was supposed to be the heaven, and was worshiped under the form of a man by the tribe of Catb in Danmat al Jandal.

Sawa was adored under the shape of a woman by the tribe of Hamadan. This idol, lying under water for some time after the deluge, was at length, it is said, discovered by the devil, and was worshipped by those of Hodhail, who instituted pilgrimages to it.

Yaghuth was an idol in the shape of a lion, and was the deity of the tribe of Madhaj and others who dwelt in Yaman.

Yauk was worshipped by the tribe of Morad, or, according to others, by that of Hamadan, under the figure of a horse. It is said he was a man of great piety, and his death much regretted; whereupon the devil appeared to his friends in a human form, and undertaking to represent him to the life, persuaded them, by way of comfort, to place his effigies in their temples, that they might have it in view when at their devotions.

Nasr was a deity adored by the tribe of Hamyar, or at Dhu'l Kalaah, in their territories, under the image of an eagle.

Besides the idols we have mentioned, the Arabs worshipped also great numbers of others, not named in the Koran, for besides that every housekeeper had his household god or gods, which he last took leave of and first saluted at his going abroad and returning home, there were no less than three hundred and sixty idols, equaling in number the days of their year, in and about the Caaba of Mecca; the chief of whom was Hobal, brought from Belka in Syria into Arabia, by Amru Ebn Lohai, pretending it would procure them rain when they wanted it. It was the statue of a man made of red agate, which having by some accident lost a hand, the Koreish repaired it with one of gold; he held in his hand seven arrows without heads or feathers, such as the Arabs used in divination.

Asaf and Nayelah, the former the image of a man, the latter of a woman, were also two idols brought with Hobal from Syria, and placed the one on Mount Safa and the other on Mount Merwa. They tell us Asaf was the son of Amru, and Nayelah the daughter of Sahal, both of the tribe of Jorham, who, committing whoredom together in the Caaba, were by God converted into stone, and afterward worshipped by the Koreish, and so much revered by them that though this superstition was condemned by Mohammed, yet he was forced to allow them to visit those mountains as monuments of divine justice.

Several of their idols, as Manah in particular, were no more than large rude stones, the worship of which the posterity of Ismael first introduced; for as they multiplied, and the territory of Mecca grew too strait for them, great numbers were obliged to seek new abodes; and on such migrations it was usual for them to take with them some of the stones of that reputed holy land, and set them up in the places where they fixed; and these stones they at first only compassed out of devotion, as they had accustomed to do in the Caaba. But this at last ended in rank idolatry, the Ismaelites forgetting the religion left them by their fathers so far as to pay divine worship to any fine stone they met with.

Some of the pagan Arabs believed neither a creation past nor a resurrection to come, attributing the origin of things to nature, and their dissolution to age. Others believed both, among whom were those, who when they died had their camel tied by their sepulchre, and so left without meat or drink to perish, and accompany them to the other world, lest they should be obliged, at the resurrection, to go on foot, which was reckoned

very scandalous. Some believed a metempsychosis, and that of the blood near the dead person's brain was formed a bird named Hamah, which once in a hundred years visited the sepulchre; though others say this bird is animated by the soul of him that is unjustly slain, and continually cries, "Oseuni, oseuni"—that is, "Give me to drink," meaning of the murderer's blood, till his death be revenged; and then it flies away. This was forbidden by Mohammed to be believed.

Let us now turn our view from the idolatrous Arabs to those among them who had embraced more rational religions.

The Persians had, by their vicinity and frequent intercourse with the Arabians, introduced the Magian religion among some of their tribes, particularly that of Tamin, a long time before Mohammed, who was so far from being unacquainted with that religion that he borrowed many of his own institutions from it.

The Jews, who fled in great numbers into Arabia, from the fearful destruction of their country by the Romans, made proselytes of several tribes, those of Kenanah, al Hareth Ebn Caaba and Kendah in particular, and in time became very powerful, and possessed of several towns and fortresses there. But the Jewish religion was not unknown to the Arabs at least above a century before; Abu Carb Asad, who was king of Yaman, about seven hundred years before Mohammed, is said to have introduced Judaism among the idolatrous Hamyarites. Some of his successors also embraced the same religion, one of whom, Yusuf, surnamed Dhu Nowas, was remarkable for his zeal, and terrible persecution of all who would not turn Jews, putting them to death by various tortures, the most common of which was throwing them into a glowing pit of fire, whence he had the opprobrious appellation of the "Lord of the pit."

Christianity had likewise made a very great progress among this nation before Mohammed. Whether St. Paul preached in any part of Arabia, properly so called, is uncertain; but the persecutions and disorders which happened in the Eastern Church soon after the beginning of the third century obliged great numbers of Christians to seek for shelter in that country of liberty; who being for the most part of the Jacobite communion, that sect generally prevailed among the Arabs. The principal tribes that embraced Christianity were Hamyar, Ghassan, Rabia, Taghlab, Bara, Tenuch, part of the tribes of Tay and Kodaa, the inhabitants of Najran and the Arabs of Hira.

The Christians at Hira received a great accession by several tribes, who fled thither for refuge from the persecution of Dhu Nowas. Al Nooman, surnamed Abu Kabus, king of Hira, who was slain a few months before Mohammed's birth, professed himself a Christian on the following occasion. This prince, in a drunken fit, ordered two of his intimate companions, who, overcome with liquor, had fallen asleep, to be buried alive. When he came to himself, he was extremely concerned at what he had done, and to expiate his crime not only raised a monument to the memory of his friends, but set apart two days, one of which he called the unfortunate and the other the fortunate day, making it a perpetual rule to himself that whoever met him on the former day should be slain, and his blood sprinkled on the monument, but he that met him on the other day should be dismissed in safety with magnificent gifts. On one of these unfortunate days, there came before him accidentally an Arab of the tribe of Tay, who had once entertained this king, when fatigued with

hunting, and separated from his attendants. The king, who could neither discharge him, contrary to the order of the day, nor put him to death, against the laws of hospitality, which the Arabians religiously observe, proposed, as an expedient, to give the unhappy man a year's respite, and to send him home with rich gifts for the support of his family, on condition that he found a surety for his returning at the year's end to suffer death. One of the prince's court, out of compassion, offered himself as his surety, and the Arab was discharged. When the last day of the term came, and no news of the Arab, the king, not at all displeased to save his host's life, ordered the surety to prepare himself to die. Those who were by represented to the king that the day was not yet expired, and therefore he ought to have patience till the evening; but in the middle of their discourse the Arab appeared. The king, admiring the man's generosity, in offering himself to certain death, which he might have avoided by letting his surety suffer, asked him what was his motive for so doing, to which he answered that he had been taught to act in that manner by the religion he professed; and al Nooman demanding what religion that was, he replied the Christian. Whereupon the king, desiring to have the doctrines of Christianity explained to him, was baptized, he and his subjects, and not only pardoned the man and his surety, but abolished his barbarous custom. This prince, however, was not the first king of Hira who embraced Christianity, al Mondar, his grandfather, having also professed the same faith, and built large churches in his capital.

Since Christianity had made so great a progress in Arabia, we may consequently suppose they had bishops in several parts for the more orderly governing of the churches. The Jacobites (of which sect we have observed the Arabs generally were) had two bishops of the Arabs subject to their Mafrian, or metropolitan of the East; one was called the bishop of the Arabs absolutely, whose seat was for the most part at Akula, which some authors identify with Cufa, others a different town near Baghdad. The other had the title of the bishop of the Seenite Arabs, of the tribe of Thaalab in Hira, or Hirta, as the Syrians call it, whose seat was in that city. The Nestorians had but one bishop, who presided over both of these dioceses of Hira and Akula, and was immediately subject to their patriarch.

These were the principal religions which obtained among the ancient Arabs; but as freedom of thought was the natural consequence of their political liberty and independence, some of them fell into other different opinions. The Koreish, in particular, were infected with Zendeism, an error supposed to have very near affinity with that of the Sadducees among the Jews, and, perhaps, not greatly different from deism; for there were several of that tribe, even before the time of Mohammed, who worshipped one God, and were free from idolatry, and yet embraced none of the other religions of the country.

The Arabians before Mohammed were, as they yet are, divided into two sorts, those who dwell in cities and towns, and those who dwell in tents. The former lived by tillage, the cultivation of palm trees, breeding and feeding of cattle, and the exercise of all sorts of trades, particularly merchandising, wherein they were very eminent, even in the time of Jacob. The tribe of Koreish were much addicted to commerce, and Mohammed, in his younger years, was brought up to the same business, it being customary for the Arabians to

exercise the same trade that their parents did. The Arabs who dwelt in tents employed themselves in pasturage, and sometimes in pillaging of passengers; they lived chiefly on the milk and flesh of camels; they often changed habitations, as the convenience of water and of pasture for their cattle invited them, staying in a place no longer than that lasted, and then removing in search of another. They generally wintered in Irak and the confines of Syria. This way of life is what the greater part of Ismael's posterity have used, as more agreeable to the temper and way of life of their father.

The Arabic language is undoubtedly one of the most ancient in the world, and arose soon after, if not at, the confusion of Babel. There were several dialects of it, very different from each other: the most remarkable were that spoken by the tribes of Hamyar and the other genuine Arabs, and that of the Koreish. The Hamyaritic seems to have approached nearer to the purity of the Syriac than the dialect of any other tribe; for the Arabs acknowledge their father Yarab to have been the first whose tongue deviated from the Syriac (which was his mother tongue, and is almost generally acknowledged by the Asiatics to be the most ancient) to the Arabic. The dialect of the Koreish is usually termed the pure Arabic, or, as the Koran, which is written in this dialect, calls it, the perspicuous and clear Arabic; perhaps, says Dr. Pocock, because Ismael, their father, brought the Arabic he had learned of the Jorhamites nearer to the original Hebrew. But the politeness and elegance of the dialect of the Koreish is rather to be attributed to their having the custody of the Caaba, and dwelling in Mecca, the centre of Arabia, as well more remote from intercourse with foreigners, who might corrupt their language, as frequented by the Arabs from the country all around, not only on a religious account, but also for the composing of their differences, from whose discourse and verses they took whatever words or phrases they judged more pure and elegant, by which means the beauties of the whole tongue became transfused into this dialect. The Arabians are full of the commendations of their language, and not altogether without reason, for it claims the preference of most others in many respects, as being very harmonious and expressive, and without so copious that they say no man, without inspiration, can be perfect master of it in its utmost extent; and yet they tell us, at the same time, that the greatest part of it has been lost, which will not be thought strange if we consider how late the art of writing was practiced among them. For though it was known to Job, their countryman, and also to the Hamyarites, many centuries before Mohammed, as appears from some ancient monuments said to be remaining in their character, yet the other Arabs, and those of Mecca in particular, were for many ages perfectly ignorant of it, unless such of them as were Jews or Christians. Moramer Ebn Morra of Anbar, a city of Irak, who lived not many years before Mohammed, was the inventor of the Arabic character, which Bashar the Kendian is said to have learned from those of Anbar, and to have introduced at Mecca but a little while before the institution of Mohammedanism. These letters of Moramer were different from the Hamyaritic; and though they were very rude, yet they were those which the Arabs used for many years, the Koran itself being at first written therein; for the beautiful character they now use was first formed by Ebn Moklah, wazir (or visir) to the khalifs al Moktader, al Kaher and al Radi,

who lived about three hundred years after Mohammed, and was brought to great perfection by Ali Ebn Bowab, who flourished in the following century, and whose name is yet famous among them on that account; yet it is said the person who completed it and reduced it to its present form, was Yakut al Mostasemi, secretary to al Mostasem, the last of the khalifs of the family of Abbas, for which reason he was surnamed al Khattat, or the scribe.

The accomplishments the Arabs valued themselves chiefly on were, 1. Eloquence, and a perfect skill in their own tongue; 2. Expertness in the use of arms and horsemanship; 3. Hospitality. The first they practiced by composing orations and poems. Their orations were of two sorts, metrical, or prosaic, the one being compared to pearls strung and the other to loose ones. They endeavored to excel in both, and whoever was able in an assembly to persuade the people to a great enterprise or dissuade them from a dangerous one, or gave them other wholesome advice, was honored with the title of khatab, or orator, which is now given to the Mohammedan preachers. They pursued a method very different from that of the Greek and Roman orators, their sentences being like loose gems, without connection, so that this sort of composition struck the audience chiefly by the fullness of the periods, the elegance of the expression and the acuteness of the proverbial sayings. Poetry was in so great esteem among them that it was a great accomplishment to be able to express one's self in verse with ease and eloquence on any extraordinary occurrence, and even in their common discourse they made frequent applications of celebrated passages of their famous poets. In their poems were preserved the distinctions of descents, the rights of tribes, the memory of great actions and the propriety of their language, for which reasons an excellent poet reflected an honor to his tribe, so that as soon as any one began to be admired for his performances of this kind in a tribe, the other tribes sent publicly to congratulate them on the occasion, and themselves made entertainments, at which the women assisted dressed in their nuptial ornaments, singing to the sound of timbrels the happiness of their tribe, who had now one to protect their honor, to preserve their genealogies and the purity of their language, and to transmit their actions to posterity; for this was all performed by their poems, to which they were solely indebted for their knowledge and instructions, moral and economical, and to which they had recourse, as to an oracle, in all doubts and differences.

Though the Arabs were so early acquainted with poetry, they did not at first write poems of any considerable length, but only expressed themselves in verse occasionally, nor was their prosody digested into rules till some time after Mohammed; for this was done, as it is said, by al Khalil Ahmed al Farahidi, who lived in the reign of the khalif Haroun al Raschid.

They were in a manner obliged to practice and encourage the exercise of arms and horsemanship by reason of the independence of their tribes, whose frequent jarings made wars almost continual; and they chiefly ended their disputes in field battles, it being a usual saying among them that God had bestowed four peculiar things on the Arabs—that their turbans should be to them instead of diadems, their tents instead of walls and houses, their swords instead of entrenchments, and their poems instead of written laws.

Hospitality was so habitual to them, and held in so much esteem, that the examples of this kind among them exceed whatever can be produced from other nations; and the contrary vice was so much in contempt that a certain poet upbraids the inhabitants of Wasel as with the greatest reproach that none of their men had the heart to give, nor their women the heart to deny.

Nor were these the only good qualities of the Arabs. They are commended by the ancients for being most exact to their words and respectful to their kindred. And they have always been celebrated for their quickness of apprehension and penetration and the vivacity of their wit, especially those of the desert.

As the Arabs had their excellences, so have they, like all other nations, their defects and vices. Their own writers acknowledge that they have a natural disposition to war, bloodshed, cruelty and rapine, being so much addicted to bear malice that they scarcely ever forgot an old grudge, which vindictive temper some physicians say is occasioned by their frequent feeding on camel's flesh (the ordinary diet of the Arabs of the desert), that creature being most malicious and tenacious of anger.

The frequent robberies committed by these people on merchants and travelers have rendered the name of an Arab almost infamous in Europe. This they are sensible of, and endeavor to excuse themselves by alleging the hard usage of their father Ishmael, who, being turned out of doors by Abraham, had the open plains and deserts given him by God for his patrimony, with permission to take whatever he could find there. And on this account they think they may with a safe conscience indemnify themselves as well as they can, not only on the posterity of Isaac, but also on everybody else, always supposing a sort of kindred between themselves and those they plunder; and in relating their adventures of this kind, they think it sufficient to change the expression, and instead of "I robbed a man of such or such a thing," to say "I gained it." We must not, however, imagine from this that they are the less honest among themselves or toward those whom they receive as friends. On the contrary, the strictest probity is observed in their camp, where everything is open and nothing ever known to be stolen.

The sciences the Arabians chiefly cultivated before Mohammedanism were three—that of their genealogies and history, such a knowledge of the stars as to foretell the changes of weather, and the interpretation of dreams. They used to value themselves highly on account of the nobility of their families, and so many disputes happened on that occasion that it is no wonder if they took great pains in settling their descents. What knowledge they had of the stars was gathered from long experience, and not from any regular study of astronomical rules. The Arabians, as the Indians also did, chiefly observed the fixed stars, contrary to other nations, whose observations were almost confined to the planets; and they foretold their effects from their influences, not their nature, and hence arose the difference of the idolatry of the Greeks and Chaldeans, who chiefly worshipped the planets, and that of the Indians, who worshipped the fixed stars.

The old Arabians, therefore, seem to have made no further progress in astronomy than to observe the influence of the stars on the weather and to give them names; and this it was obvious for them to do by reason of their pastoral way of life, lying night and day in the open plains. The

names they imposed on the stars generally alluded to cattle and flocks, and they were so nice in distinguishing them that no language has so many names of stars and asterisms as the Arabic; for though they have since borrowed the names of several constellations from the Greeks, yet the far greater part of their own growth are much more ancient, particularly those of the more conspicuous stars dispersed in several constellations, and those of the lesser constellations which are contained within the greater and were not observed or named by the Greeks.

Thus have we given a succinct account of the state of the ancient Arabians before Mohammed, or, to use their expression, in the time of ignorance. We shall next consider the state of religion in the East and of the two great empires which divided that part of the world between them at the time of Mohammed's setting up for a prophet, and the conducive circumstances and accidents that favored his success.

## II. Of the State of Christianity, particularly of the Eastern Churches, and of Judaism at the time of Mohammed's Appearance, and of the methods taken by him for Establishing his Religion, and the Circumstances which Concurred thereto.

If we take the testimony of ecclesiastical historians even from the third century, we shall find the Christian world to have then had a very different aspect from what some authors have represented, and so far from being endued with active grace, zeal and devotion that, on the contrary, by the ambition of the clergy, and by drawing the abstrusest niceties into controversy, and dividing and subdividing about them into endless schisms and contentions, they had so destroyed that peace, love and charity from among them which the gospel was given to promote, that they had lost the whole substance of their religion while thus eagerly contending for their own speculations concerning it, and in a manner quite drove Christianity out of the world by those very controversies in which they disputed with each other about it. In those dark ages it was that most of those superstitions and corruptions we now justly abhor in the Church of Rome were not only broached but established, which gave great advantages to the propagation of Mohammedanism. The worship of saints and images in particular had then reached such a scandalous pitch that it even surpassed what is now practiced among the Romanists.

After the Nicene Council the Eastern Church was engaged in perpetual controversies, and torn to pieces by the disputes of the Arians, Sabellians, Nestorians and Eutychians. In the Western Church Damasus and Ursicinus carried their contests at Rome for the episcopal seat so high that they came to open violence and murder, which Viventius, the governor, not being able to suppress, he retired into the country and left them to themselves till Damasus prevailed. It is said that on this occasion, in the church of Sicinius, there were no less than one hundred and thirty-seven found killed in one day.

These discussions were greatly owing to the emperors, and particularly to Constantius, who, confounding the pure and simple Christian religion with anile superstitions, and perplexing it with intricate questions, instead of reconciling different opinions, excited many disputes, which he fomented as they proceeded with infinite alterations. This grew worse in the time of Justin-

ian, who, not to be behind the bishops of the fifth and sixth centuries in zeal, thought it no crime to condemn to death a man of a different persuasion from his own.

This corruption of doctrine and morals in the princes and clergy was necessarily followed by a general depravity of the people, those of all conditions making it their sole business to get money by any means, and then to squander it away, when they had got it, in luxury and debauchery.

But, to be more particular as to the nation we are now writing of, Arabia was of old famous for heresies, which might be in some measure attributed to the liberty and independency of the tribes. Some of the Christians of that nation believed the soul died with the body, and was to be raised again with it at the last day; these Origen is said to have convinced. Among the Arabs it was that the heresies of Ebion, Beryllus and the Nazarenes, and also that of the Collyridians, were broached, or at least propagated; the latter introduced the Virgin Mary for God, or worshiped her as such, offering her a sort of twisted cake called collyris, whence the sect had its name.

This notion of the divinity of the Virgin Mary was also believed by some at the Council of Nice, who said there were two Gods besides the Father, viz., Christ and the Virgin Mary, and were thence named Marianites. Others imagined her to be exempt from humanity, and deified; which goes but little beyond the popish superstition in calling her the complement of the Trinity, as if it were imperfect without her. This foolish imagination is justly condemned in the Koran as idolatrous, and gave a handle to Mohammed to attack the Trinity itself.

There were other sects of many denominations within the borders of Arabia which took refuge there from the proscriptions of the imperial edicts, several of whose notions Mohammed incorporated with his religion, as may be observed hereafter.

Though the Jews were an inconsiderable and despised people in other parts of the world, yet in Arabia, whither many of them fled from the destruction of Jerusalem, they grew very powerful, several tribes and princes embracing their religion, which led Mohammed at first to show great regard to them, adopting many of their opinions, doctrines and customs, thereby to draw them, if possible, into his interest. But that people, agreeably to their wonted obstinacy, were so far from being his proselytes that they were among the bitterest enemies he had, waging continual war with him, so that their reduction cost him infinite trouble and danger, and at last his life. This aversion of theirs was at length reciprocated by him, so that he used them for the latter part of his life much worse than he did the Christians, and frequently exclaimed against them in his Koran.

It has been observed by a great politician that it is impossible for a person to make himself a prince and found a State without opportunities. If the distracted state of religion favored the designs of Mohammed on that side, the weakness of the Roman and Persian monarchies might flatter him with no less hopes in any attempt on those once formidable empires, either of which, had they been in their full vigor, must have crushed Mohammedanism in its birth; whereas nothing nourished it more than the success the Arabians met with in their enterprises against those powers, which success they failed not to attribute to their new religion and the divine assistance thereof.

The Roman empire declined after Constantine, whose successors were remarkable for their bad

qualities, especially cowardice and cruelty. By Mohammed's time the western half of the empire was overrun by the Goths, and the eastern so reduced by the Huns on the one side and the Persians on the other, that it was not in a condition to stem the violence of a powerful invasion. The emperor Maurice paid tribute to the khagan or king of the Huns; and after Phocas had murdered his master, such havoc prevailed among the soldiers that when Heraclius came seven years after to muster the army, there were only two soldiers left alive of all those who had borne arms when Phocas first usurped the empire. And though Heraclius was a prince of admirable courage, and had done what possibly could be done to restore the discipline of the army, yet still the very vitals of the empire seemed mortally wounded; that there could no time have happened more fatal to the empire or more favorable to the enterprises of the Arabs, who seem to have been raised up on purpose by God to be a scourge to the Christian Church for not living conformably to that holy religion which they had received.

The general luxury and degeneracy of manners into which the Grecians were sunk also contributed not a little to enervating their forces, which were still further drained by those two great destroyers, monachism and persecution.

The Persians had also been in a declining condition for some time before Mohammed, occasioned chiefly by their intestine broils and dissensions, great part of which arose from the devilish doctrines of Manes and Mazdak. These sects had certainly been the immediate ruin of the Persian empire, had not Anushirwan as soon as he came to the throne put Mazdak to death with all his followers, and the Manicheans also, restoring the ancient Magian religion.

In the reign of this prince Mohammed was born. He was the last king of Persia who deserved the throne, which after him was almost perpetually contended for till subverted by the Arabs.

Arabia, at Mohammed's setting up, was strong and flourishing, having been peopled at the expense of the Grecian empire, whence the violent proceedings of the domineering sects forced many to seek refuge in a free country, as Arabia then was, where they who could not enjoy tranquillity and their conscience at home found a secure retreat. The Arabians were not only a populous nation, but unacquainted with the luxury and delicacies of the Greeks and Persians, and inured to hardships of all sorts, living in a most parsimonious manner, seldom eating any flesh, drinking no wine and sitting on the ground. Their political government was also such as favored the designs of Mohammed, for the division and independency of their tribes were so necessary to the first propagation of his religion and the foundation of his power that it would have been scarcely possible for him to have effected either had the Arabs been united in one society. But when they had embraced his religion, the consequent union of their tribes was no less necessary and conducive to their future conquests and grandeur.

This posture of public affairs in the Eastern world, both as to its religious and political state, it is more than probable Mohammed was well acquainted with, he having had sufficient opportunities of informing himself in those particulars in his travels as a merchant in his younger years; and though it is not to be supposed his views at first were so extensive as afterward, when they were enlarged by his good fortune, yet he might

reasonably promise himself success in his first attempts from thence. As he was a man of extraordinary parts and address, he knew how to make the best of every incident, and turn what might seem dangerous to his own advantage.

Mohammed came into the world under some disadvantages, which he soon surmounted. His father Abd'allah was a younger son of Abd'al-motaleb, and dying very young and in his father's lifetime, left his widow and infant son in very mean circumstances, his whole subsistence consisting but of five camels and one Ethiopian she-slave. Abd'al-motaleb was therefore obliged to take care of his grandchild Mohammed, which he not only did during his life, but at his death enjoined his eldest son Abu Taleb to provide for him for the future, which he very affectionately did, and instructed him in the business of a merchant, which he followed, and to that end he took him with him into Syria when he was but thirteen, and afterward recommended him to Khadijah, a noble and rich widow, for her factor, in whose service he conducted himself so well that by making him her husband she soon raised him to an equality with the richest in Mecca.

After he began by this advantageous match to live at his ease it was that he formed the scheme of establishing a new religion, or, as he expressed it, of replanting the only true and ancient one, professed by Adam, Noah, Abraham, Moses, Jesus and all the prophets, by destroying the gross idolatry into which the generality of his countrymen had fallen, and weeding out the corruptions and superstitions which the latter Jews and Christians had, as he thought, introduced into their religion, and reducing it to its original purity, which consisted chiefly in the worship of one only God.

It is the general opinion of Christian writers that ambition and the desire of satisfying his sensuality were the motives of his undertaking. It may be so, yet his first views perhaps were not so interested. His original design of bringing the pagan Arabs to the knowledge of the true God was certainly commendable. Mohammed was no doubt fully satisfied in his conscience of the truth of his grand point, the unity of God, which was what he chiefly attended to, all his other doctrines and institutions being rather accidental and unavoidable than premeditated and designed.

Since then Mohammed was himself persuaded of his grand article of faith, which in his opinion was violated by all the rest of the world, it is easy to conceive that he might think it a meritorious work to rescue the world from such ignorance and superstition, and by degrees, with the help of a warm imagination, which an Arab seldom wants, to suppose himself destined by Providence for effecting that great reformation. And this fancy of his might take still deeper root in his mind during the solitude he thereupon affected, usually retiring for a month in the year to a cave in Mount Hara near Mecca. One thing which may be probably urged against the enthusiasm of this prophet of the Arabs is the wise conduct and great prudence he all along showed in pursuing his design, which seem inconsistent with the wild notions of a hot-brained religionist.

The terrible destruction of the Eastern Churches, once so glorious and flourishing, by the sudden spreading of Mohammedanism, and the great successes of its professors against the Christians, necessarily inspire a horror of that religion in those to whom it has been so fatal, and no wonder if they endeavor to set the character of its founder

and its doctrines in the most infamous light. But the damage done by Mohammed to Christianity seems to have been rather owing to his ignorance than malice, for his great misfortune was his not having a competent knowledge of the real and pure doctrines of the Christian religion, which was in his time so corrupted that it is not surprising if he went too far, and resolved to abolish what he might think incapable of reformation.

It can scarcely be doubted that Mohammed had a violent desire of being reckoned an extraordinary person, which he could attain to by no means more effectually than by pretending to be a messenger sent from God to inform mankind of his will. This might be at first his utmost ambition; and had his fellow-citizens not obliged him by their persecutions to seek refuge elsewhere and to take up arms against them in his own defence, he had perhaps continued a private person and contented himself with the veneration and respect due to his prophetic office; but being once at the head of a little army, and encouraged by success, it is no wonder if he raised his thoughts to attempt what had never before entered into his imagination.

But whatever were his motives, Mohammed had certainly the personal qualifications necessary to accomplish his undertaking. The Mohammedan authors are excessive in their commendations of him, and speak much of his religious and moral virtues. His charity in particular, they say, was so conspicuous that he had seldom any money in his house, keeping no more for his own use than was just sufficient to maintain his family; and he frequently spared even some part of his own provisions to supply the necessities of the poor, so that before the year's end he had generally little or nothing left. Though the eulogies of these writers are justly to be suspected of partiality, yet this much may be inferred from thence, that for an Arab who had been educated in paganism, and had but a very imperfect knowledge of his duty, he was a man of at least tolerable morals, and not such a monster of wickedness as he is usually represented.

He had indisputably a piercing and sagacious wit, and was thoroughly versed in all the arts of insinuation. The Eastern historians describe him to have been a man of excellent judgment and a happy memory, and these natural parts were improved by a great experience and knowledge of men and the observations he had made in his travels. They say he was a person of few words, of an equal, cheerful temper, pleasant and familiar in conversation, of inoffensive behavior toward his friends, and of great condescension toward his inferiors; to all which were joined a comely, agreeable person and a polite address.

As to acquired learning, it is confessed he had none at all, having had no other education than what was customary in his tribe, who neglected what we call literature, esteeming no language in comparison with their own, their skill in which they gained by use and not by books, and contenting themselves with committing to memory such passages of their poets as they judged might be of use to them in life. This defect was so far from being prejudicial to his design that he made the greatest use of it, insisting that the writings which he produced as revelations from God could not possibly be a forgery of his own, because it was not conceivable that a person who could neither write nor read should be able to compose a book of such excellent doctrine and in so elegant a style, and thereby obviating an objection that might have carried a great deal of

weight; and for this reason his followers, instead of being ashamed of their master's ignorance, glory in it as a proof of his divine mission, and scruple not to call him (as he is indeed called in the Koran itself) the illiterate prophet.

We shall now relate, as briefly as possible, the steps he took toward effecting his enterprise and the circumstances which contributed to his success.

Before he made any attempt abroad, he rightly judged that it was necessary for him to begin by the conversion of his own household. Having therefore retired with his family to the above mentioned cave in Mount Hara, he there opened the secret of his mission to his wife Khadijah, and acquainted her that the angel Gabriel had just before appeared to him, and told him that he was appointed the apostle of God; he also repeated to her a passage which he pretended had been revealed to him by the ministry of the angel, with those other circumstances of his first appearance which are related by the Mohammedan writers. Khadijah received the news with great joy, swearing by him in whose hands her soul was that she trusted he would be the prophet of his nation, and immediately communicated what she had heard to her cousin Warakah Ebn Nawfal, who, being a Christian, could write in the Hebrew character, and was well versed in the Scriptures; and he as readily concurred in her opinion, assuring her that the same angel who had formerly appeared unto Moses was now sent to Mohammed. This first overture the prophet made in the month of Ramadan, in the fortieth year of his age, which is therefore usually called the year of his mission.

Encouraged by so good a beginning, he resolved to try what he could do by private persuasion, not daring to hazard the whole affair by exposing it too suddenly to the public. He soon made proselytes of those under his own roof, viz., his wife Khadijah, his servant Zeid Ebn Haretha, and his cousin and pupil Ali, the son of Abu Taleb. The next person Mohammed applied to was Abdallah Ebn Abi Kohafa, surnamed Abu Beer, a man of great authority among the Koreish, and one whose interest he well knew would be of great service to him, as it soon appeared; for Abu Beer, being gained over, prevailed also on Othman Ebn Affan, Abd'alrahman Ebn Awf, Saad Ebn Abi Wakkas, al Zobeir Ebn al Awam, and Telha Ebn Obeidallah, all principal men in Mecca, to follow his example. These men were the six chief companions, who, with a few more, were converted in the space of three years; at the end of which Mohammed, having, as he hoped, a sufficient interest to support him, kept his mission no longer a secret, but gave out that God had commanded him to admonish his near relations, and in order to do it with more convenience and prospect of success he directed Ali to prepare an entertainment and invite the sons and descendants of Abd'al-motaleb, intending then to open his mind to them; this was done, and about forty of them came, but Abu Laheb, one of his uncles, making the company break up before Mohammed had an opportunity of speaking, obliged him to give them a second invitation the next day; and when they were come, he made them the following speech: "I know no man in all Arabia who can offer his kindred a more excellent thing than I now do you; I offer you happiness both in this life and in that which is to come: God almighty hath commanded me to call you unto him; who, therefore, among you will be assisting to me herein, and become my brother and my vicegerent?" All of them hesitating and declining the matter, Ali at length rose up, and de-

clared that he would be his assistant, and vehemently threatened those who should oppose him. Mohammed upon this embraced Ali with great demonstrations of affection, and desired all who were present to hearken to and obey him as his deputy.

Mohammed now began to preach in public to the people, who heard him with some patience, till he began to upbraid them with the idolatry, obstinacy and perverseness of themselves and their fathers, which so highly provoked them that they declared themselves his enemies, and would soon have procured his ruin had he not been protected by Abu Taleb. The chief of the Koreish warmly solicited this person to desert his nephew, making frequent remonstrances against the innovations he was attempting; which proving ineffectual, they at length threatened him with an open rupture if he did not prevail on Mohammed to desist. At this Abu Taleb was so far moved that he earnestly dissuaded his nephew from pursuing the affair any further, representing the great danger he and his friends must otherwise run. But Mohammed was not to be intimidated, and Abu Taleb, seeing him so firmly resolved to proceed, used no further arguments, but promised to stand by him against all his enemies.

The Koreish next tried what they could do by force and ill treatment; so that it was not safe for Mohammed's followers to continue at Mecca any longer, whereupon Mohammed gave them leave to seek for refuge elsewhere. And accordingly, in the fifth year of the prophet's mission, sixteen of them, four of whom were women, fled into Ethiopia; and among them Othman Ebn Affan and his wife Rakiyah, Mohammed's daughter. This was the first flight; but afterward several others followed them, retiring one after another, to the number of eighty-three men and eighteen women, besides children. These refugees were kindly received by the king of Ethiopia, who refused to deliver them up to those whom the Koreish sent to demand them, and as the Arab writers unanimously assert, even professed the Mohammedan religion.

In the sixth year of his mission Mohammed had the pleasure of seeing his party strengthened by the conversion of his uncle Hamza, a man of great valor and merit, and of Omar Ebn al Khattab, a person highly esteemed, and once a violent opposer of the prophet. As persecution generally advances rather than obstructs the spreading of a religion, Islamism made so great a progress among the Arab tribes that the Koreish, to suppress it effectually, if possible, in the seventh year of Mohammed's mission, made a solemn league or covenant against the Hashemites and the family of al Motalleb, engaging themselves to contract no marriages with any of them, and to have no communication with them; and to give it the greater sanction reduced it into writing, and laid it up in the Caaba. Upon this the tribe became divided into two factions; and the family of Hashem all repaired to Abu Taleb, as their head, except only Abd'al Uzza, surnamed Abu Laheb, who, out of his inveterate hatred to his nephew and his doctrine, went over to the opposite party, whose chief was Abu Sofian Ebn Harb, of the family of Omeyya.

The families continued thus at variance for three years; but in the tenth year of his mission, Mohammed told his uncle Abu Taleb, that God had manifestly showed his disapprobation of the league which the Koreish had made against them by sending a worm to eat out every word of the in-

strument except the name of God. Of this accident Mohammed had probably some private notice, for Abu Taleb went immediately to the Koreish and acquainted them with it, offering, if it proved false, to deliver his nephew up to them; but in case it were true, he insisted that they ought to lay aside their animosity, and annul the league they had made against the Hashemites. To this they acquiesced, and going to inspect the writing, to their great astonishment found it to be as Abu Taleb had said; and the league was thereupon declared void.

In the same year Abu Taleb died, at the age of about fourscore, and it is the general opinion that he died an infidel, though others say that when he was at the point of death he embraced Mohammedanism, and produced some passages out of his poetical compositions to confirm their assertion. About a month, or, as some write, three days, after the death of this great benefactor and patron, Mohammed had the additional mortification to lose his wife Khadijah, who had so generously made his fortune. For which reason this year is called the year of mourning.

On the death of these two persons, the Koreish began to be more troublesome than ever to their prophet, insomuch that he was obliged to seek for shelter elsewhere, and first pitched upon Tayef, about sixty miles east from Mecca, for the place of his retreat, where he stayed a month; but though the better sort of men treated him with some respect, the slaves and inferior people rose against him, and bringing him to the wall of the city, obliged him to return to Mecca, where he put himself under the protection of al Mortaam Ebn Adi.

This repulse greatly discouraged his followers. However, Mohammed boldly continued to preach to the public assemblies at the pilgrimage, and gained several proselytes, and among them six of the inhabitants of Yathreb, of the Jewish tribe of Khazraj, who, on their return home, spoke in commendation of their new religion, and exhorted their fellow-citizens to embrace it.

It was in the twelfth year of his mission that Mohammed gave out that he had made his night journey from Mecca to Jerusalem, and thence to heaven. Dr. Prideaux thinks he invented the story either to answer the expectations of those who demanded some miracle as a proof of his mission, or else, by pretending to have conversed with God, to establish the authority of whatever he should think fit to leave behind by way of oral tradition, and make his sayings serve the same purpose as the oral law of the Jews. But we do not find that Mohammed himself ever expected that so great a regard should be paid to his sayings as his followers have since done; and since he disclaimed any power of performing miracles, it seems rather to have been a stroke of policy to raise his reputation by pretending to have actually conversed with God in heaven, as Moses had done on the mount, and to have received several institutions immediately from him, whereas before he contented himself with persuading them that he had all by the ministry of Gabriel.

In this year, called by the Mohammedans the accepted year, twelve men of Yathreb or Medina came to Mecca and took an oath of fidelity to Mohammed at al Akaba, a hill on the north of that city. This oath was called the woman's oath, because a man was not thereby obliged to take up arms in defence of Mohammed or his religion, it being the same oath that was afterward exacted of the women, the form of which we have in the

Koran, and is to this effect, viz.: "That they should renounce all idolatry; that they should not steal, nor commit fornication, nor kill their children (as the pagan Arabs used to do when they apprehended they should not be able to maintain them), nor forge calumnies; and that they should obey the prophet in all things that were reasonable." When they had solemnly engaged to do all this, Mohammed sent one of his disciples, named Masab Ebn Omair, home with them to instruct them more fully in the grounds and ceremonies of his new religion.

Masab, having arrived at Medina, by the assistance of those who had been formerly converted, gained several proselytes, Mohammedanism spreading so fast that there was scarcely a house in which there were not some who had embraced it.

The next year, being the thirteenth of Mohammed's mission, Masab returned to Mecca, accompanied by seventy-three men and two women of Medina who had professed Islamism, besides some unbelievers. On their arrival, they immediately sent to Mohammed and offered him their assistance, of which he was now in great need, for his adversaries had by this time grown so powerful in Mecca that he could not stay there much longer without imminent danger. Wherefore he accepted their proposal, and met them one night, by appointment, at al Akaba above mentioned. Upon their protesting the sincerity of their intentions, Mohammed swore to be faithful to them, on condition that they should protect him against all enemies. They then asked him what recompense they were to expect if they should happen to be killed in his quarrel; he answered paradise. Whereupon they pledged their faith to him, and so returned home, after Mohammed had chosen twelve out of their number who were to have the same authority among them as the twelve apostles of Christ had among his disciples.

Hitherto Mohammed had propagated his religion by fair means; for before this second oath of fealty at al Akaba he had no permission to use any force at all, and in several places of the Koran, which he pretended were revealed during his stay at Mecca, he declares his business was only to preach and admonish, that he had no authority to compel any person to embrace his religion; and he was so far from allowing his followers to use force that he exhorted them to bear patiently those injuries which were offered them on account of their faith, and when persecuted himself chose rather to quit the place of his birth and retire to Medina than to make any resistance. But this great moderation seems entirely owing to his want of power and the great superiority of his opponents for the first twelve years of his mission; for no sooner was he enabled to make head against his enemies than he proclaimed that God had allowed him and his followers to defend themselves against the infidels; and at length, as his forces increased, he pretended to have the divine leave even to attack them and to destroy idolatry and set up the true faith by the sword. The first passage of the Koran which gave Mohammed the permission of defending himself by arms is said to have been that in the twenty-second chapter, after which a great number to the same purpose were revealed.

That Mohammed had a right to take up arms for his own defence against his unjust persecutors may perhaps be admitted; but whether he ought afterward to have made use of that means for establishing his religion is a question we will not here determine. It is certainly one of the most

convincing proofs that Mohammedanism was no other than a human invention, that it owed its progress and establishment almost entirely to the sword; and it is one of the strongest demonstrations of the divine origin of Christianity that it prevailed against all the force and powers of the world by the mere dint of its own truth, after having stood the assaults of all manner of persecutions, and at length made the Roman emperors themselves submit to it.

Mohammed, having provided for the security of his companions as well as his own by the league offensive and defensive which he had now concluded with the people of Medina, directed them to repair thither, which they accordingly did; but himself with Abu Beer and Ali remained behind, having not yet received the divine permission, as he pretended, to leave Mecca. The Koreish, fearing the consequence of this new alliance, began to think it absolutely necessary to prevent Mohammed's escape to Medina; and having held a council, they came to a resolution that he should be killed, and agreed that a man should be chosen out of every tribe for the execution of this design, and that each man should have a blow at him with his sword, that the guilt of his blood might fall equally on all the tribes, to whose united power the Hashemites were much inferior, and therefore durst not attempt to revenge their kinsman's death.

This conspiracy was scarcely formed when it came to Mohammed's knowledge, and he gave out that it was revealed to him by the angel Gabriel, who had now ordered him to retire to Medina. Whereupon, to amuse his enemies, he directed Ali to lie down in his place and wrap himself up in his green cloak, which he did, and Mohammed escaped miraculously, as they pretend, to Abu Beer's house, unperceived by the conspirators, who had already assembled at the prophet's door. They, in the mean time, looking through the crevice and seeing Ali, whom they took to be Mohammed himself, asleep, continued watching there till morning, when Ali arose and they found themselves deceived.

From Abu Beer's house Mohammed and he went to a cave in Mount Thur, to the south-east of Mecca, accompanied only by Amer Ebn Foheirah, Abu Beer's servant, and Abd'allah Ebn Oreikat, an idolater, whom they had hired for a guide. In this cave they lay hid three days to avoid the search of their enemies, which they very narrowly escaped. Abu Beer, seeing the prophet in such imminent danger, became very sorrowful, whereupon Mohammed comforted him with these words, recorded in the Koran: "Be not grieved, for God is with us." Their enemies having retired, they left the cave and set out for Medina by a by-road, and having fortunately, or, as the Mohammedans tell us, miraculously, escaped some who were sent to pursue them, arrived safely in the city; whither Ali followed them in three days.

The first thing Mohammed did after his arrival at Medina was to build a temple for his religious worship, and a house for himself; and being securely settled at Medina, and able not only to defend himself against the insults of his enemies, but to attack them, he began to send out small parties to make reprisals on the Koreish. But the foundation on which he built all his succeeding greatness was the gaining of the battle of Bedr, which was fought in the second year of the Hejra, and is so famous in the Mohammedan history. We shall not enter into any detail of his subsequent battles and expeditions, which amounted to a considerable number. Some reckon no less than

twenty-seven expeditions in which Mohammed was personally present, in nine of which he gave battle, besides several other expeditions in which he was not present. His forces he maintained partly by the contributions of his followers, which he called by the name of *zaca* or alms, and the payment of which he artfully made one main article of his religion, and partly by ordering a fifth part of the plunder to be brought into the public treasury for that purpose, in which matter he likewise pretended to act by the divine direction.

In a few years, by the success of his arms, he considerably raised his credit and power. In the sixth year of the Hejra he set out with fourteen hundred men to visit the temple of Mecca. When he came to al Hodeibiya, which is situated partly within and partly without the sacred territory, the Koreish sent to let him know that they would not permit him to enter Mecca unless he forced his way, whereupon he called his troops about him, and resolved to attack the city; but the people of Mecca sending Arwa Ebn Masud, prince of the tribe of Takif, as their ambassador to desire peace, a truce was concluded between them for ten years, by which any person was allowed to enter into league either with Mohammed or with the Koreish as he thought fit.

It may not be improper, to show the veneration and respect the Mohammedans by this time had for their prophet, to mention the account which the above-mentioned ambassador gave the Koreish of their behavior at his return. He said he had been at the courts both of the Roman emperor and of the king of Persia, and never saw any prince so highly respected by his subjects as Mohammed was by his companions; for whenever he made the ablution in order to say his prayers, they ran and caught the water that he had used, and whenever he spit they immediately licked it up, and gathered every hair that fell from him.

In the seventh year of the Hejra, Mohammed began to think of propagating his religion beyond the bounds of Arabia, and sent messengers to the neighboring princes with letters to invite them to Mohammedanism. Nor was this project without some success. Khosru Parviz, then king of Persia, received his letter with great disdain, and tore it in a passion, sending away the messenger very abruptly, which when Mohammed heard, he said, God shall tear his kingdom. And soon after a messenger came to Mohammed from Badhan, king of Yaman, who was a dependent on the Persians, to acquaint him that he had received orders to send him to Khosru. Mohammed put off his answer till the next morning, and then told the messenger it had been revealed to him that night that Khosru was slain by his son Shiruyeh, adding that he was well assured his new religion and empire should rise to as great a height as that of Khosru, and therefore bade him advise his master to embrace Mohammedanism. The messenger being returned, Badhan in a few days received a letter from Shiruyeh informing him of his father's death and ordering him to give the prophet no further disturbance, whereupon Badhan and the Persians with him became Mohammedans.

The emperor Heraclius, as the Arabian historians assure us, received Mohammed's letter with great respect, laying it on his pillow, and dismissed the bearer honorably. And some pretend that he would have professed this new faith had he not been afraid of losing his crown.

Mohammed wrote to the same effect to the king of Ethiopia, and to Mokawkas, governor of Egypt,

who gave the messenger a very favorable reception and sent several valuable presents to Mohammed. He also sent letters of the like purport to several Arab princes, particularly one to al Hareth Ebn Abi Shamer, king of Ghassan, who returning for answer that he would go to Mohammed himself, the prophet said, May his kingdom perish.

The eighth year of the Hejra was a fortunate one to Mohammed. In the beginning of it Khalid Ebn al Walid and Amru Ebn al As, both excellent soldiers, the first of whom afterward conquered Syria and other countries, and the latter Egypt, became proselytes to Mohammedanism; and soon after, the prophet sent three thousand men against the Grecian forces to revenge the death of one of his ambassadors, who was slain by an Arab of the tribe of Ghassan at Muta, a town in the territory of Balka, in Syria, about three days' journey eastward from Jerusalem, near which town they met. The Grecians being vastly superior in number, the Mohammedans were repulsed in the first attack, and lost successively three of their generals.

In this year also Mohammed took the city of Mecca, the inhabitants of which had broken the truce agreed on two years before. For the tribe of Beer, who were confederates of the Koreish, attacking those of Khozaah, who were allies of Mohammed, killed several of them, being supported in the action by a party of the Koreish themselves. The consequence of this violation was soon apprehended; and Abu Sofian himself made a journey to Medina on purpose to heal the breach and renew the truce; but in vain, for Mohammed, glad of this opportunity, refused to see him; whereupon he applied to Abu Beer and Ali; but they giving him no answer, he was obliged to return to Mecca as he came.

Mohammed immediately gave orders for preparations to be made, that he might surprise the Meccans while they were unprepared to receive him; in a little time he began his march, and by the time he came near the city his forces were increased to ten thousand men. The Meccans, not being in a condition to defend themselves against so formidable an army, surrendered at discretion; and Abu Sofian saved his life by turning Mohammedan. About twenty-eight of the idolaters were killed by a party under the command of Khaleel; but this happened contrary to Mohammed's orders, who, when he entered the town, pardoned all the Koreish on their submission, except only six men and four women, who were more obnoxious than the rest; but of these no more than three men and one woman were put to death, the rest obtaining pardon on their embracing Mohammedanism, and one of the women making her escape.

The remainder of this year Mohammed employed in destroying the idols in and round about Mecca, sending several of his generals on expeditions for that purpose, and to invite the Arabs to Islamism.

The next year, being the ninth of the Hejra, the Mohammedans call the year of embassies; for the Arabs had been hitherto expecting the issue of the war between Mohammed and the Koreish; but so soon as that tribe, the principal of the whole nation, and the genuine descendants of Ishmael, whose prerogatives none offered to dispute, had submitted, they were satisfied that it was not in their power to oppose Mohammed, and therefore began to come in to him in great numbers, and to send embassies to make their submissions to him, both to Mecca while he stayed there, and also to Medina, whither he returned this year. Among

the rest, five kings of the tribe of Hamyar professed Mohammedanism, and sent ambassadors to notify the same.

In the tenth year Ali was sent into Yaman to propagate the Mohammedan faith there, and, as it is said, converted the whole tribe of Hamdan in one day. Their example was quickly followed by all the inhabitants of that province, except only those of Najran, who, being Christians, chose rather to pay tribute.

Thus was Mohammedanism established, and idolatry rooted out, even in Mohammed's lifetime (for he died the next year), throughout all Arabia, except only Yamama; where Moseilama, who set up also for a prophet as Mohammed's competitor, had a great party, and was not reduced till the khalifat of Abu Beer. And the Arabs, being then united in one faith and under one prince, found themselves in a condition of making those conquests which extended the Mohammedan faith over so great a part of the world.

### III. Of the Koran itself: the peculiarities of that Book; the manner of its being written and published, and the general design of it.

The word Koran, derived from the verb karaa, to read, signifies properly, in Arabic, the reading, or rather that which ought to be read; by which name the Mohammedans denote not only the entire book or volume of the Koran, but also any particular chapter or section of it; just as the Jews call either the whole Scripture or any part of it by the name of Karah or Mikra, words of the same origin and import. It may not be amiss to observe, that the syllable Al in the word Al-koran is only the Arabic article, signifying the, and therefore ought to be omitted when the English article is prefixed.

Besides this peculiar name, the Koran is also honored with several appellations common to other books of scripture: as al Forkan, from the verb faraka, to divide or distinguish; not, as the Mohammedan doctors say, because those books are divided into chapters or sections, or distinguish good and evil, but in the same notion that the Jews use the word Perek or Pirka, from the same root, to denote a section or portion of Scripture. It is also called al Moshaf, the volume, and al Kitab, the book, by way of eminence, which answers to the Biblia of the Greeks; and al Dhikr, the admonition, which name is also given to the Pentateuch and gospel.

The Koran is divided into one hundred and fourteen larger portions of very unequal length, which we call chapters, but the Arabians Sowar, in the singular Sura, a word rarely used on any other occasion, and properly signifying a row, order or regular series; as a course of bricks in building, or a rank of soldiers in an army; and is the same in use and import with the Sura, or Tora of the Jews, who also call the fifty-three sections of the Pentateuch Sedarim, a word of the same signification.

These chapters are not in the manuscript copies distinguished by their numerical order, but by particular titles, which are taken sometimes from a particular matter treated of or person mentioned therein, but usually from the first word of note, exactly in the same manner as the Jews have named their Sedarim, though the word from which some chapters are denominated be very far distant, toward the middle, or perhaps the end, of the chapter. The occasion of this seems to have been that the verse or passage in which

such word occurs was, in point of time, revealed and committed to writing before the other verses of the same chapter which precede it in order, and the title being given to the chapter before it was completed or the passages reduced to their present order, the verse from whence such title was taken did not always happen to begin the chapter. Some chapters have two or more titles, occasioned by the difference of the copies.

Every chapter is subdivided into smaller portions of very unequal length also, which we customarily call verses, but the Arabic word is Ayat, the same with the Hebrew Oth, and signifies signs or wonders, such as are the secrets of God, his attributes, works, judgments and ordinances, delivered in those verses, many of which have their particular titles also imposed in the same manner as those of the chapters.

Notwithstanding this subdivision is common and well known, yet we have never yet seen any manuscript in which the verses are actually numbered, though in some copies the number of verses in each chapter is set down after the title. And the Mohammedans seem to have some scruple in making an actual distinction in their copies, because the chief disagreement between their several editions of the Koran consists in the division and number of the verses.

There are seven principal editions or ancient copies of the Koran, two of which were published and used at Medina, a third at Mecca, a fourth at Cufa, a fifth at Basra, a sixth in Syria and a seventh, called the common or vulgar edition. Of these editions, the first of Medina makes the whole number of the verses six thousand; the second and fifth, six thousand two hundred and fourteen; the third, six thousand two hundred and nineteen; the fourth, six thousand two hundred and thirty-six; the sixth, six thousand two hundred and twenty-six; and the last, six thousand two hundred and twenty-five. But they are all said to contain the same number of words, namely, seventy-seven thousand six hundred and thirty-nine, and the same number of letters, viz., three hundred and twenty-three thousand and fifteen; for the Mohammedans have in this also imitated the Jews, that they have superstitiously numbered the very words and letters of their law; nay, they have taken the pains to compute the number of times each particular letter of the alphabet is contained in the Koran.

Besides these unequal divisions of chapter and verse, the Mohammedans have also divided their Koran into sixty equal portions, which they call Ahzab, in the singular Hizb, each subdivided into four equal parts, which is also an imitation of the Jews, who have an ancient division of their Mishna into sixty portions called Massietoth; but the Koran is more usually divided into thirty sections only, named Ajza, from the singular Joz, each of twice the length of the former, and in the like manner subdivided into four parts. These divisions are for the use of the readers of the Koran in the royal temples, or in the adjoining chapels where the emperors and great men are interred. There are thirty of these readers belonging to every chapel, and each reads his section every day, so that the whole Koran is read over once a day.

Next after the title, at the head of every chapter except the ninth, is prefixed the following solemn form, by the Mohammedans called the Bismillah, "In the name of the most merciful God," which form they constantly place at the beginning of all their books and writings in general as a peculiar mark or distinguishing characteristic of their religion, it being counted a sort of impiety to omit it. The Jews for the same purpose make use of the form, In the name of the Lord, or, In the name of the great God, and the Eastern Christians that of, In the name of the Father and of the Son and of the Holy Ghost. But we are inclined to believe Mohammed really took this form, as he did many other things, from the Persian magi, who used to begin their books in these words, Benam Yezdan bakhshaisgher dadar—that is, In the name of the most merciful, just God.

This auspicious form, and also the titles of the chapters, are by the generality of the doctors and commentators believed to be of divine origin no less than the text itself, but the more moderate are of opinion that they are only human additions, and not the very word of God.

There are twenty-nine chapters of the Koran which have this peculiarity, that they begin with certain letters of the alphabet, some with a single one, others with more. These letters the Mohammedans believe to be the peculiar marks of the Koran and to conceal several profound mysteries, the certain understanding of which the more intelligent confess has not been communicated to any mortal, their prophet only excepted. Notwithstanding which some will take the liberty of guessing at their meaning by that species of Cabbala called by the Jews Notarikon, and suppose the letters to stand for as many words expressing the names and attributes of God, his works, ordinances and decrees; and therefore these mysterious letters, as well as the verses themselves, seem in the Koran to be called signs. Others explain the intent of these letters from their nature or organ, or else from their value in numbers, according to another species of the Jewish Cabbala called Gematria, the uncertainty of which conjectures sufficiently appears from their disagreement. Thus, for example, five chapters, one of which is the second, begin with these letters, A L M, which some imagine to stand for Allah latif magid, God is gracious and to be glorified, or Ana li minni, To me and from me, viz., belongs all perfection and proceeds all good, or else for Ana Allah alam, I am the most wise God, taking the first letter to mark the beginning of the first word, the second the middle of the second word, and the third the last of the third word, or for Allah, Gabriel, Mohammed, the author, revealer and preacher of the Koran. Others say, that as the letter A belongs to the lower part of the throat, the first of the organs of speech, L to the palate, the middle organ, and M to the lips, which are the last organ, so these letters signify that God is the beginning, middle and end, or ought to be praised in the beginning, middle and end, of all our words and actions, or, as the total value of those three letters in numbers is seventy-one, they signify that in the space of so many years the religion preached in the Koran should be fully established. The following conjecture is at least as certain as any of the former, that these letters were set there by the amanuensis for Amar li Mohammed—i. e., At the command of Mohammed—as the five letters prefixed to the nineteenth chapter seem to be there written by a Jewish scribe for Cob Yaas—i. e., Thus he commanded.

The Koran is universally admitted to be written with the utmost elegance and purity of language, in the dialect of the tribe of Koreish, the most noble and polite of all the Arabians, but with some mixture, though very rare, of other dialects. It is confessedly the standard of the Arabic tongue, and as the more orthodox believe and are taught

by the book itself, inimitable by any human pen, and therefore insisted on as a permanent miracle, greater than that of raising the dead, and alone sufficient to convince the world of its divine origin.

And to this miracle did Mohammed himself chiefly appeal for the confirmation of his mission, publicly challenging the most eloquent men in Arabia to produce even a single chapter that might be compared with it.

The style of the Koran is generally beautiful and fluent, especially where it imitates the prophetic manner and Scripture phrases. It is concise and often obscure, adorned with bold figures after the Eastern taste, enlivened with florid and sententious expressions, and in many places, especially where the majesty and attributes of God are described, sublime and magnificent.

Though it be written in prose, yet the sentences generally conclude in a long continued rhyme, for the sake of which the sense is often interrupted, and unnecessary repetitions too frequently made. The Arabians are so delighted with this jingling, that they employ it in their most elaborate compositions, which they also embellish with frequent passages of and allusions to the Koran, so that it is next to impossible to understand them without being well versed in this book.

It is probable the harmony of expression which the Arabians find in the Koran might contribute not a little to make them relish the doctrine therein taught, and give an efficacy to arguments which, had they been nakedly proposed without this rhetorical dress, might not have so easily prevailed. Very extraordinary effects are related of the power of words well chosen and artfully placed, which are no less powerful either to ravish or amaze than music itself; wherefore as much has been ascribed by the best orators to this part of rhetoric as to any other. He must have a very bad ear who is not moved by the very cadence of a well-turned sentence; and Mohammed seems not to have been ignorant of the enthusiastic operation of rhetoric on the minds of men, for which reason he has not only employed his utmost skill in these his pretended revelations to preserve that dignity and sublimity of style which might seem not unworthy of the majesty of that Being whom he gave out to be the author of them, and to imitate the prophetic manner of the Old Testament, but he has not neglected even the other parts of oratory, in which he succeeded so well, and so strangely captivated the minds of his audience, that several of his opponents thought it the effect of witchcraft and enchantment, as he sometimes complains.

"The general design of the Koran," to use the words of a very learned person, "seems to be this: To unite the professors of the three different religions then followed in the populous country of Arabia, who for the most part lived promiscuously, and wandered without guides, the far greater number being idolaters, the rest Jews and Christians, mostly of erroneous and heterodox belief, in the knowledge and worship of one eternal, invisible God, by whose power all things were made, and those which are not, may be, the supreme Governor, Judge and absolute Lord of the creation; established under the sanction of certain laws, and the outward signs of certain ceremonies, partly of ancient and partly of novel institution, and enforced by setting before them rewards and punishments, both temporal and eternal, and to bring them all to the obedience of Mohammed, as the prophet and ambassador of God, who after the repeated admonitions, promises and threats of former ages was at last to establish and propagate

God's religion on earth by force of arms, and to be acknowledged chief pontiff in spiritual matters, as well as supreme prince in temporal."

The great doctrine, then, of the Koran is the unity of God, to restore which point Mohammed pretended was the chief end of his mission, it being laid down by him as a fundamental truth that there never was nor ever can be more than one true orthodox religion; for though the particular laws or ceremonies are only temporary and subject to alteration according to the divine direction, yet the substance of it, being eternal truth, is not liable to change, but continues immutably the same. And he taught that whenever this religion became neglected or corrupted in essentials God had the goodness to reinform and readmonish mankind thereof by several prophets, of whom Moses and Jesus were the most distinguished till the appearance of Mohammed, who is their seal, no other being to be expected after him. And the more effectually to induce people to hearken to him, a great part of the Koran is employed in relating examples of dreadful punishments formerly inflicted by God on those who rejected and abused his messengers; several of which stories or some circumstances of them are taken from the Old and New Testament, but many more from the apocryphal books and traditions of the Jews and Christians of those ages, set up in the Koran as truths in opposition to the Scriptures, which the Jews and Christians are charged with having altered; and we are inclined to believe that few or none of the relations or circumstances in the Koran were invented by Mohammed, as is generally supposed, it being easy to trace the greatest part of them much higher, as the rest might be were more of those books extant and it was worth while to make the inquiry.

The other part of the Koran is taken up in giving necessary laws and directions, in frequent admonitions to moral and divine virtues, and above all to the worshiping and reverencing of the only true God and resignation to his will, among which are many excellent things intermixed, not unworthy even a Christian's perusal.

But besides these, there are many passages which are occasional and relate to particular emergencies; for whenever anything happened which perplexed Mohammed he had constant recourse to a new revelation as an infallible expedient in all nice cases; and he found the success of this method answer his expectation. It was certainly an admirable and politic contrivance of his to bring down the whole Koran at once to the lowest heaven only, and not to the earth, as a bungling prophet would have done; for if the whole had been published at once, innumerable objections might have been made which it would have been very hard, if not impossible, for him to solve; but as he pretended to have received it by parcels, as God saw proper that they should be published for the conversion and instruction of the people, he had a sure way to answer all emergencies and to extricate himself with honor from any difficulty which might occur. If any objection be hence made to that eternity of the Koran which the Mohammedans are taught to believe, they easily answer it by their doctrine of absolute predestination, according to which all the accidents for the sake of which these occasional passages were revealed were predetermined by God from all eternity.

That Mohammed was really the author and chief contriver of the Koran is beyond dispute, though it is highly probable that he had no small

assistance in his design from others, as his countrymen failed not to object to him. However, they differed so much in their conjectures as to the particular persons who gave him such assistance that they were not able, it seems, to prove the charge, Mohammed, it is to be presumed, having taken his measures too well to be discovered.

The Mohammedans absolutely deny that the Koran was composed by their prophet himself or any other for him, it being their general and orthodox belief that it is of divine origin; that it is eternal and uncreated, remaining, as some express it, in the very essence of God; that the first transcript has been from everlasting by God's throne, written on a table of vast size, called the preserved table, in which are also recorded the divine decrees, past and future; that a copy from this table, in one volume on paper, was by the ministry of the angel Gabriel sent down to the lowest heaven, in the month of Ramadan, on the night of power; from whence Gabriel revealed it to Mohammed by parcels, some at Mecca and some at Medina, at different times during the space of twenty-three years, as the exigency of affairs required, giving him, however, the consolation to show him the whole (which they tell us was bound in silk and adorned with gold and precious stones of paradise) once a year; but in the last year of his life he had the favor to see it twice. They say that few chapters were delivered entire, the most part being revealed piecemeal, and written down from time to time by the prophet's amanuensis in such or such a part of such or such a chapter till they were completed according to the directions of the angel. The first parcel that was revealed is generally agreed to have been the first five verses of the ninety-sixth chapter.

After the new-revealed passages had been from the prophet's mouth taken down in writing by his scribe, they were published to his followers, several of whom took copies for their private use, but the far greater number got them by heart. The originals, when returned, were put promiscuously into a chest, observing no order of time, for which reason it is uncertain when many passages were revealed.

When Mohammed died, he left his revelations in the same disorder we have mentioned, and not digested into the method, such as it is, which we now find them in. This was the work of his successor, Abu Beer, who, considering that a great number of passages were committed to memory by Mohammed's followers, many of whom were slain in the wars, ordered the whole to be collected, not only from the palm leaves and skins on which they had been written, and which were kept between two boards or covers, but also from the mouths of such as had gotten them by heart. And this transcript, when completed, he committed to the custody of Hafsa, the daughter of Omar, one of the prophet's widows.

From this it is generally imagined that Abu Beer was really the compiler of the Koran; though for aught appears to the contrary, Mohammed left the chapters complete as we now have them, excepting such passages as his successor might add or correct from those who had gotten them by heart, what Abu Beer did besides being perhaps no more than to arrange the chapters in their present order, which he seems to have done without any regard to time, having generally placed the longest first.

However, in the thirtieth year of the Hejra, Othman being then khalif, and observing the

great disagreement in the copies of the Koran in the several provinces of the empire, those of Irak, for example, following the reading of Abu Musa al Ashari, and the Syrians that of Maedad Ebn Aswad, he ordered a great number of copies to be transcribed from that of Abu Beer, in Hafsa's care, under the inspection of Zeid Ebn Thabet, Abd'allah Ebn Zobair, Said Ebn al As and Abd'alrahman Ebn al Hareth the Makhzomite, whom he directed that wherever they disagreed about any word they should write it in the dialect of the Koraish, in which it was at first delivered. These copies when made were distributed in the several provinces of the empire, and the old ones burnt and suppressed.

The want of vowels in the Arabic character made Mokris, or readers, whose peculiar study and profession it was to read the Koran with its proper vowels, absolutely necessary. But these, differing in their manner of reading, occasioned still further variations in the copies of the Koran, as they are now written with the vowels; and herein consist much the greater part of the various readings throughout the book. The readers whose authority the commentators chiefly alleged in admitting these various readings are seven in number.

There being some passages in the Koran which are contradictory, the Mohammedan doctors obviate any objection from thence by the doctrine of abrogation; for they say that God in the Koran commanded several things which were for good reasons afterward revoked and abrogated.

Passages abrogated are divided into three kinds: the first, where the letter and sense are both abrogated; the second, where the letter only is abrogated, but the sense remains; and the third, where the sense is abrogated, though the letter remains.

Of the first kind were several verses, which by the tradition of Malec Ebn Ans were in the prophet's lifetime read in the chapter of repentance, but are not now extant, one of which, being all he remembered of them, was the following: "If a son of Adam had two rivers of gold, he would covet yet a third; and if he had three, he would covet yet a fourth (to be added) unto them; neither shall the belly of a son of Adam be filled, but with dust. God will turn unto him who shall repent." Another instance of this kind we have from the tradition of Abd'allah Ebn Masud, who reported that the prophet gave him a verse to read which he wrote down, but the next morning, looking in his book, he found it was vanished and the leaf blank; this he acquainted Mohammed with, who assured him the verse was revoked the same night.

Of the second kind is a verse called the verse of stoning, which according to the tradition of Omar, afterward khalif, was extant while Mohammed was living, though it is not now to be found. The words are these, "Abhor not your parents, for this would be ingratitude in you. If a man and a woman of reputation commit adultery, ye shall stone them both; it is a punishment ordained by God, for God is mighty and wise."

Of the last kind are observed several verses in sixty-three different chapters, to the number of two hundred and thirty-five. Such as the precepts of turning in prayer to Jerusalem; fasting after the old custom; forbearance toward idolaters; avoiding the ignorant and the like.

Though it is the belief of the Sonnites or orthodox that the Koran is uncreated and eternal, subsisting in the very essence of God, and Mohammed himself is said to have pronounced him

an infidel who asserted the contrary, yet several have been of a different opinion; particularly the sect of the Motazalites, and the followers of Isa Ebn Sobeih Abn Musa, surnamed al Mozdar, who hesitated not to accense those who held the Koran to be uncreated of infidelity as asserters of two eternal beings.

This point was controverted with so much heat that it occasioned many calamities under some of the khalifs of the family of Abbas, al Mamun making a public edict declaring the Koran to be created, which was confirmed by his successors al Motasem and al Wathek, who whipped, imprisoned and put to death those of the contrary opinion. But at length al Motawakkel, who succeeded al Wathek, put an end to these persecutions by revoking the former edicts, releasing those that were imprisoned on that account, and leaving every man at liberty as to his belief in this point.

Al Ghazali seems to have tolerably reconciled both opinions, saying that the Koran is read and pronounced with the tongue, written in books and kept in memory; and is yet eternal, subsisting in God's essence, and not possible to be separated thence by any transmission into men's memories or the leaves of books; by which he seems to mean no more than that the original idea of the Koran only is really in God, and consequently co-essential and coeternal with him, but that the copies are created and the work of man.

The opinion of al Jahedh, chief of a sect bearing his name, touching the Koran, is too remarkable to be omitted; he used to say it was a body, which might sometimes be turned into a man, and sometimes into a beast, which seems to agree with the notion of those who assert the Koran to have two faces, one of a man, the other of a beast, thereby, as we conceive, intimating the double interpretation it will admit of, according to the letter or the spirit.

As some have held the Koran to be created, so there have not been wanting those who have asserted that there is nothing miraculous in that book in respect to style or composition, excepting only the prophetic relations of things past and predictions of things to come, and that had God left men to their natural liberty, and not restrained them in that particular, the Arabians could have composed something not only equal, but superior to the Koran, in eloquence, method and purity of language. This was another opinion of the Motazalites, and in particular of al Mozdar, above mentioned, and al Nodham.

The Koran being the Mohammedans' rule of faith and practice, it is no wonder its expositors and commentators are so very numerous. And it may not be amiss to take notice of the rules they observe in expounding it.

One of the most learned commentators distinguishes the contents of the Koran into allegorical and literal. The former comprehends the more obscure, parabolical and enigmatical passages, and such as are repealed or abrogated, the latter those which are plain, perspicuous, liable to no doubt and in full force.

To explain these severally in a proper manner, it is necessary from tradition and study to know the time when each passage was revealed, its circumstances, state and history, and the reasons or particular emergencies for the sake of which it was revealed. Or more explicitly, whether the passage was revealed at Mecca or at Medina, whether it be abrogated or does itself abrogate any other passage, whether it be anticipated in

order of time or postponed, whether it be distinct from the context or depends upon it, whether it be particular or general, and lastly, whether it be implicit by intention or explicit in words.

From what has been said the reader may easily believe that this book is held in the greatest reverence and esteem among the Mohammedans. They dare not so much as touch it without being first washed or legally purified; and lest they should do so by inadvertence, they write these words on the cover or label: "Let none touch it but they who are clean." They read it with great care and respect, never holding it below their girdles. They swear by it, consult it in important matters, carry it with them to war, write sentences of it on their banners, adorn it with gold and precious stones, and knowingly suffer it not to be in the possession of any of a different persuasion.

The Mohammedans, far from thinking the Koran to be profaned by a translation, as some authors have asserted, have taken care to have their scriptures translated not only into the Persian tongue, but into several others, particularly the Javan and Malayan, though out of respect to the original Arabic these versions are generally, if not always, interlineal.

#### IV. Of the Doctrines and Positive Precepts of the Koran which relate to Faith and Religious Duties.

It has been already observed that the fundamental position on which Mohammed erected the superstructure of his religion was that from the beginning to the end of the world there has been, and for ever will be, but one true orthodox belief, consisting as to matter of faith in acknowledging the only true God, and believing in and obeying such messengers or prophets as he should from time to time send, with proper credentials, to reveal his will to mankind; and as to matter of practice, in the observance of the immutable and eternal laws of right and wrong, together with such other precepts and ceremonies as God should think fit to order for the time being, according to the different dispensations in different ages of the world; and to this religion he gave the name of Islam, which word signifies "resignation" or "submission" to the service and commands of God, and is used as the proper name of the Mohammedan religion, which his followers maintain is the same in reality with that of all the prophets from Adam. Under pretext that this eternal religion was in his time corrupted, Mohammed pretended to be a prophet sent by God to reform those abuses which had crept into it, and to reduce it to its primitive simplicity, with the addition, however, of peculiar laws and ceremonies, some of which had been used in former times and others were now first instituted. And he comprehended the whole substance of his doctrine under these two propositions or articles of faith, viz., that there is but one God, and that he was the apostle of God; in consequence of which latter article all such ordinances and institutions as he thought fit to establish must be received as obligatory and of divine authority.

The Mohammedans divide their religion into two distinct parts, Iman, faith or theory, and Din, religion or practice, and teach that it is built on five fundamental points, one belonging to faith and the other four to practice. The first is that confession of faith which we have already mentioned, "that there is no God but the true God, and that Mohammed is his

apostle," under which they comprehend six distinct branches—viz., 1. Belief in God; 2. In his angels; 3. In his scriptures; 4. In his prophets; 5. In the resurrection and day of judgment; and 6. In God's absolute decree and predetermination both of good and evil.

The four points relating to practice are—1. Prayer, under which are comprehended those washings or purifications which are necessary preparations required before prayer; 2. Alms; 3. Fasting; and 4. The pilgrimage to Mecca. Of each of these we shall speak in their order.

That both Mohammed and those among his followers who are reckoned orthodox had and continue to have just and true notions of God and his attributes—always excepting their rejecting the Trinity—appears plain from the Koran itself and all the Mohammedan divines.

The existence of angels and their purity are absolutely required to be believed in the Koran; and he is reckoned an infidel who denies there are such beings, or hates any of them, or asserts any distinction of sexes among them. They believe them to have pure and subtle bodies, created of fire; that they neither eat nor drink, nor propagate their species; that they have various forms and offices, some adoring God in different postures, others singing praises to him or interceding for mankind. They hold that some of them are employed in writing down the actions of men, others in carrying the throne of God and other services.

The four angels whom they look on as more eminently in God's favor are Gabriel, to whom they give several titles, particularly those of the "holy spirit" and the "angel of revelations," supposing him to be honored by God with greater confidence than any other and to be employed in writing down the divine decrees; Michael, the friend and protector of the Jews; Azrael, the "angel of death," who separates men's souls from their bodies; and Israfil, whose office it will be to sound the trumpet at the resurrection. The Mohammedans also believe that two guardian angels attend on every man to observe and write down his actions, being changed every day, and therefore called al Moakkibat, or the angels who continually succeed one another.

This whole doctrine concerning angels Mohammed and his disciples have borrowed from the Jews, who learned the names and offices of those beings from the Persians, as themselves confess. The ancient Persians firmly believed the ministry of angels and their superintendence over the affairs of this world, and therefore assigned them distinct charges and provinces, giving their names to their months and the days of their months. The Jews teach that the angels are created of fire; that they have several offices; that they intercede for men and attend them. The angel of death they name Duma, and say he calls dying persons by their respective names at their last hour.

The devil, whom Mohammed names Eblis, from his despair, was once one of those angels who are nearest to God's presence, called Azazel, and fell, according to the doctrine of the Koran, for refusing to pay homage to Adam at the command of God.

Besides angels and devils, the Mohammedans are taught by the Koran to believe the existence of an intermediate order of creatures, which they call Gin or Genii, created also of fire, but of a grosser fabric than angels, since they eat and drink and propagate their species, and are subject to death. Some of these are supposed to be good and others bad, and capable of future salvation or damnation,

as men are; whence Mohammed pretended to be sent for the conversion of genii as well as men. The Orientals pretend that these genii inhabited the world for many ages before Adam was created, under the government of several successive princes, who all bore the common name of Solomon; but falling at length into an almost general corruption, Eblis was sent to drive them into a remote part of the earth, there to be confined; that some of that generation, still remaining, were by Tahmurath, one of the ancient kings of Persia, who waged war against them, forced to retreat into the famous mountains of Kaf; of which successions and wars they have many fabulous and romantic stories.

The Mohammedan notions concerning these genii agree almost exactly with what the Jews write of a sort of demons, called Shedim, whom some fancy to have been begotten by two angels, named Aza and Azael, on Naamah, the daughter of Lamech, before the flood. However, the shedim, they tell us, agree in three things with the ministering angels; for that, like them, they have wings, and fly from one end of the world to the other, and have some knowledge of futurity; and in three things they agree with men, like whom they eat and drink, are propagated and die. They also say that some believe in the law of Moses, and are consequently good, and that others of them are infidels and reprobates.

As to the Scriptures, the Mohammedans are taught by the Koran that God, in divers ages of the world, gave revelations of his will in writing to several prophets, the whole of which it is absolutely necessary for a good Moslem to believe. The number of these sacred books was, according to them, one hundred and four, of which ten were given to Adam, fifty to Seth, thirty to Edris or Enoch, ten to Abraham, and the other four, being the Pentateuch, the Psalms, the Gospel and the Koran, were successively delivered to Moses, David, Jesus and Mohammed, which last, being the seal of the prophets, these revelations are now closed, and no more are to be expected. All these divine books, except the last four, they admit to be now lost, and their contents unknown, though the Sabians have several books which they attribute to some of the antediluvian prophets; and of those four, the Pentateuch, Psalms and Gospel, they say, have undergone so many alterations and corruptions that though there may possibly be some part of the true word of God therein, yet no credit is to be given to the present copies in the hands of the Jews and Christians. The Jews in particular are frequently reflected on in the Koran for falsifying and corrupting their copies of their law; and some instances of such pretended corruption, both in that book and the two others, are produced by Mohammedan writers.

Besides the books above mentioned, the Mohammedans also take notice of the writings of Daniel and several other prophets, and even make quotations from them, but these they do not believe to be divine scripture, or of any authority in matters of religion.

The number of the prophets, which have been from time to time sent by God into the world, amounts to no less than two hundred and twenty-four thousand, according to one Mohammedan tradition, or to one hundred and twenty-four thousand according to another; among whom three hundred and thirteen were apostles, sent with special commissions to reclaim mankind from infidelity and superstition; and six of them brought new laws or dispensations, which successively abrogated the

preceding; these were Adam, Noah, Abraham, Moses, Jesus and Mohammed. All the prophets in general the Mohammedans believe to have been free from great sins and errors, and professors of one and the same religion—that is, Islam—notwithstanding the different laws and institutions which they observed. They allow of degrees among them, and hold some of them to be more excellent and honorable than others. The first place they give to the revealers and establishers of new dispensations, and the next to the apostles.

In this great number of prophets, they not only reckon divers patriarchs and persons named in Scripture, as Adam, Seth, Lot, Ismael, Nun, Joshua, but several others, whose very names do not appear there, as Saleh, Khedr, Dhn'lkeff, etc.

As Mohammed acknowledged the divine authority of the Pentateuch, Psalms and Gospel, he often appeals to the consonancy of the Koran with those writings, and to the prophecies which he pretended were therein concerning himself, as proofs of his mission, and he frequently charges the Jews and Christians with stifling the passages which bear witness to him. His followers also produce several texts even from our present copies of the Old and New Testaments to support their master's cause.

The next article of faith required by the Koran is the belief of a general resurrection and a future judgment. But before we consider the Mohammedan tenets in those points, it will be proper to mention what they are taught to believe concerning the intermediate state, both of the body and of the soul, after death.

When a corpse is laid in the grave, they say he is received by an angel, who gives him notice of the coming of the two Examiners, who are two black livid angels, of a terrible appearance, named Monker and Nakir. These order the dead person to sit upright, and examine him concerning his faith, as to the unity of God and the mission of Mohammed; if he answers rightly, they suffer the body to rest in peace, and it is refreshed by the air of paradise; but if not, they beat him on the temples with iron maces, till he roars out for anguish so loud that he is heard by all from east to west, except men and genii. Then they press the earth on the corpse, which is gnawed and stung till the resurrection by ninety-nine dragons with seven heads each; or, as others say, their sins will become venomous beasts, the grievous ones stinging like dragons, the smaller like scorpions, and the others like serpents—circumstances which some understand in a figurative sense.

These notions Mohammed certainly borrowed from the Jews, among whom they were very anciently received. They say that, the angel of death coming and sitting on the grave, the soul immediately enters the body and raises it on its feet; then he examines the departed person and strikes him with a chain half of iron and half of fire; at the first blow all his limbs are loosened; at the second the bones are scattered, which are gathered together again by angels; and the third stroke reduces the body to dust and ashes, and it returns into the grave. This rack of torture they call Hibbut hakkeber, or the beating of the sepulchre, and pretend that all men in general must undergo it, except only those who die on the evening of the Sabbath or have dwelt in the land of Israel.

As to the soul, the Mohammedans hold that when it is separated from the body by the angel of death it enters into that state which they call al Berzakh, or the interval between death and the resurrection. If the departed person was a be-

liever, they say two angels meet it who convey it to heaven that its place there may be assigned according to its merit and degree. For they distinguish the souls of the faithful into three classes: the first of prophets, whose souls are admitted into paradise immediately; the second of martyrs, whose spirits, according to a tradition of Mohammed, rest in the crops of green birds which eat of the fruits and drink of the river of paradise; and the third of other believers, concerning the state of whose souls before the resurrection there are various opinions. For, 1. Some say they stay near the sepulchres, with liberty however of going wherever they please, which they confirm from Mohammed's manner of saluting them at their graves, and his affirming that the dead heard those salutations as well as the living, though they could not answer. Whence perhaps proceeded the custom of visiting the tombs of relations, so common among the Mohammedans. 2. Others imagine they are with Adam in the lowest heaven, and also support their opinion by the authority of their prophet, who gave out that in his return from the upper heavens in his pretended night journey he saw there the souls of those who were destined to paradise on the right hand of Adam, and of those who were condemned to hell on his left. 3. Others fancy the souls of believers remain in the well Zemzem, and those of infidels in a certain well in the province of Hadramaut, called Borbut; but this opinion is branded as heretical. 4. Others say they stay near the graves for seven days, but that whither they go afterward is uncertain. 5. Others that they are all in the trumpet whose sound is to raise the dead. And, 6. Others that the souls of the good dwell in the forms of white birds under the throne of God. As to the condition of the souls of the wicked, besides the opinions that have been already mentioned, the more orthodox hold that they are offered by the angels to heaven, from whence being repulsed as stinking and filthy, they are offered to the earth; and being also refused a place there, are carried down to the seventh earth and thrown into a dungeon, which they call Sajin, under a green rock, or according to a tradition of Mohammed, under the devil's jaw, to be there tormented till they are called up to be joined again to their bodies.

Though some among the Mohammedans have thought that the resurrection will be merely spiritual, and no more than the returning of the soul to the place whence it first came, and others who allow man to consist of body only, that it will be merely corporeal, the received opinion is that both body and soul will be raised, and their doctors argue strenuously for the possibility of the resurrection of the body, and dispute with great subtlety concerning the manner of it. But Mohammed has taken care to preserve one part of the body, whatever becomes of the rest, to serve for a basis of the future edifice, or rather a heaven for the mass which is to be joined to it. For he taught that a man's body was entirely consumed by the earth except only the bone called Ajb, which we name the os coccygis or rump-bone; and that as it was the first formed in the human body it will also remain uncorrupted till the last day, as a seed from whence the whole is to be renewed; and this he said will be effected by a forty days' rain which God should send, and which would cover the earth to the height of twelve cubits, and cause the bodies to sprout forth like plants. Herein also is Mohammed indebted to the Jews, who say the same thing of the bone Luz, excepting that what he attributes to a great rain will be

effected according to them by a dew impregnating the dust of the earth.

The time of the resurrection the Mohammedans allow to be a secret to all but God alone, the angel Gabriel himself acknowledging his ignorance in this point when Mohammed asked him about it. However, they say the approach of that day may be known from certain signs which are to precede it. These signs they distinguish into two sorts, the lesser and the greater.

The lesser signs are, 1. The decay of faith among men. 2. The advancing of the meanest persons to eminent dignity. 3. That a maid-servant shall become the mother of her mistress (or master), by which is meant either that toward the end of the world men shall be much given to sensuality, or that the Mohammedans shall then take many captives. 4. Tumults and seditions. 5. A war with the Turks. 6. Great distress in the world, so that a man when he passes by another's grave shall say, Would to God I were in his place! 7. That the provinces of Irak and Syria shall refuse to pay their tribute. And, 8. That the buildings of Medina shall reach to Ahab or Yahab.

The greater signs are,

1. The sun's rising in the west, which some have imagined it originally did.

2. The appearance of the beast, which shall rise out of the earth in the temple of Mecca, or on Mount Safa, or in the territory of Tayef, or some other place. This beast they say is to be sixty cubits high. They describe this monster as to her form as having the head of a bull, the eyes of a hog, the ears of an elephant, the horns of a stag, the neck of an ostrich, the breast of a lion, the color of a tiger, the back of a cat, the tail of a ram, the legs of a camel and the voice of an ass. Some say this beast is to appear three times in several places, and that she will bring with her the rod of Moses and the seal of Solomon, and being so swift that none can overtake or escape her, will with the first strike all the believers on the face, and mark them with the word Mumen—i. e., believer—and with the latter will mark the unbelievers on the face likewise, with the word Cafer—i. e., infidel—that every person may be known for what he really is. They add that the same beast is to demonstrate the vanity of all religions except Islam, and to speak Arabic. All this stuff seems to be the result of a confused idea of the beasts in the Revelations.

3. War with the Greeks, and the taking of Constantinople by seventy thousand of the posterity of Isaac, who shall not win that city by force of arms, but the wall shall fall down while they cry out, There is no God but God: God is most great! As they are dividing the spoil news will come to them of the appearance of Antichrist, whereupon they shall leave all and return back.

4. The coming of Antichrist, whom the Mohammedans call al Masih al Dajjal—i. e., the false or lying Christ—and simply al Dajjal. He is to be one-eyed, and marked on the forehead with the letters C. F. R., signifying Cafer or infidel. They say that the Jews give him the name of Messiah Ben David, and pretend he is to come in the last days, and to be lord both of land and sea, and that he will restore the kingdom to them. According to the traditions of Mohammed, he is to appear first between Irak and Syria, or according to others in the province of Khorasan; they add that he is to ride on an ass; that he will be followed by seventy thousand Jews of Isphahan, and continue on earth forty days, of which one will be equal in length to a year, another to a month, an-

other to a week, and the rest will be common days; that he is to lay waste all places, but will not enter Mecca or Medina, which are to be guarded by angels; and that at length he will be slain by Jesus, who is to encounter him at the gate of Lud. It is said that Mohammed foretold several Antichrists, to the number of about thirty, but one of greater note than the rest.

5. The descent of Jesus on earth. They pretend that he is to descend near the white tower to the east of Damascus when the people are returned from the taking of Constantinople; that he is to embrace the Mohammedan religion, marry a wife, get children, kill Antichrist, and at length die after forty years', or according to others twenty-four years', continuance on earth. Under him they say there will be great security and plenty in the world, all hatred and malice being laid aside; when lions and camels, bears and sheep shall live in peace, and a child shall play with serpents unhurt.

6. War with the Jews, of whom the Mohammedans are to make a prodigious slaughter, the very trees and stones discovering such of them as hide themselves, except only the tree called Ghar-kad, which is the tree of the Jews.

7. The eruption of Gog and Magog, or, as they are called in the East, Yajuj and Majuj, of whom many things are related in the Koran and the traditions of Mohammed. These barbarians, they tell us, having passed the Lake of Tiberias, which the vanguard of their vast army will drink dry, will come to Jerusalem, and there greatly distress Jesus and his companions, till at his request God will destroy them, and fill the earth with their carcasses, which after some time God will send birds to carry away at the prayers of Jesus and his followers. Their bows, arrows and quivers the Moslems will burn for seven years together; and at last God will send a rain to cleanse the earth and to make it fertile.

8. A smoke which shall fill the whole earth.

9. An eclipse of the moon. Mohammed is reported to have said that there would be three eclipses before the last hour; one to be seen in the east, another in the west and the third in Arabia.

10. The returning of the Arabs to the worship of Allat and al Uzza and the rest of their ancient idols, after the decease of every one in whose heart there was faith equal to a grain of mustard-seed, none but the very worst of men being left alive. For God, they say, will send a cold odoriferous wind, blowing from Syria Damascena, which shall sweep away the souls of all the faithful, and the Koran itself, so that men will remain in the grossest ignorance for a hundred years.

11. The discovery of a vast heap of gold and silver by the retreating of the Euphrates, which will be the destruction of many.

12. The demolition of the Caaba or temple of Mecca by the Ethiopians.

13. The speaking of beasts and inanimate things.

14. The breaking out of fire in the province of Hejaz, or according to others in Yaman.

15. The appearance of a man of the descendants of Kahtan, who shall drive men before him with his staff.

16. The coming of the Mohdi or director concerning whom Mohammed prophesied that the world should not have an end till one of his own family should govern the Arabians, whose name should be the same with his own name, and whose father's name should also be the same with his

father's name; and who should fill the earth with righteousness. This person the Shiites believe to be now alive, and concealed in some secret place till the time of his manifestation; for they suppose him to be no other than the last of the twelve Imams, named Mohammed Abu'lkasem, as their prophet was, and the son of Hassan al Askeri, the eleventh of that succession. He was born at Samarra in the two hundred and fifty-fifth year of the Hejra. From this tradition, it is to be presumed, an opinion pretty current among the Christians took its rise, that the Mohammedans are in expectation of their prophet's return.

17. A wind which shall sweep away the souls of all who have but a grain of faith in their hearts, as has been mentioned under the tenth sign.

These are the greater signs which, according to their doctrine, are to precede the resurrection, but still leave the hour of it uncertain, for the immediate sign of its being come will be the first blast of the trumpet, which they believe will be sounded three times. The first they call the blast of consternation, at the hearing of which all creatures in heaven and earth shall be struck with terror, except those whom God shall be pleased to exempt from it.

The Mohammedans believe that the first blast will be followed by a second, which they call the blast of examination, when all creatures both in heaven and earth shall die or be annihilated, except those which God shall please to exempt from the common fate; and this they say shall happen in the twinkling of an eye—nay, in an instant, nothing surviving except God alone, with paradise and hell, and the inhabitants of those two places and the throne of glory. The last who shall die will be the angel of death.

Forty years after this will be heard the blast of resurrection, when the trumpet shall be sounded the third time by Israfil, who, together with Gabriel and Michael, will be previously restored to life, and standing on the rock of the temple of Jerusalem, shall at God's command call together all the dry and rotten bones and other dispersed parts of the bodies and the very hairs to judgment. This angel, having by the divine order set the trumpet to his mouth and called together all the souls from all parts, will throw them into his trumpet, from whence, on his giving the last sound, at the command of God, they shall fly forth like bees and fill the whole space between heaven and earth, and then repair to their respective bodies, which the opening earth will suffer to arise; and the first who shall so arise, according to a tradition of Mohammed, will be himself.

As to the length of the day of judgment, the Koran in one place tells us that it will last one thousand years and in another fifty thousand. To reconcile this apparent contradiction, the commentators use several expedients, some saying they know not what measure of time God intends in these passages, others that these forms of speaking are figurative, and were designed only to express the terribleness of that day, it being usual for the Arabs to describe what they dislike as of long continuance, and others suppose them spoken only in reference to the difficulty of the business of the day, which if God should commit to any of his creatures, they would not be able to transact it in so many thousand years.

Having said so much in relation to the time of the resurrection, let us now see who are to be raised from the dead, in what manner and form they shall be raised, in what place they shall be assembled, and to what end, according to the doctrine of the Mohammedans.

That the resurrection will be general, and extend to all creatures, angels, genii, men and animals, is the received opinion which they support by the authority of the Koran.

The manner of their resurrection will be very different. Those who are destined to be partakers of eternal happiness will arise in honor and security, and those who are doomed to misery in disgrace and under dismal apprehensions. Mohammed is also said to have taught that mankind shall be assembled at the last day, distinguished into three classes: The first, of those who go on foot; the second, of those who ride; and the third, of those who creep groveling with their faces on the ground. The first class is to consist of those believers whose good works have been few; the second of those who are more acceptable to him, whence Ali affirmed that the pious, when they come forth from the sepulchres, shall find ready prepared for them white-winged camels with saddles of gold; and the third class will be composed of the infidels, whom God shall cause to make their appearance with their faces on the earth, blind, dumb and deaf. But the ungodly will not be thus only distinguished; for according to a tradition of the prophet, there will be ten sorts of wicked men on whom God shall on that day fix certain discreterary marks. The first will appear in the form of apes; these are the professors of Zendeism. The second in that of swine; these are they who have been greedy of filthy lucre, and enriched themselves by public oppression. The third will be brought with their heads reversed and their feet distorted; these are the usurers. The fourth will wander about blind; these are unjust judges. The fifth will be deaf, dumb and blind, understanding nothing; these are they who glory in their works. The sixth will gnaw their tongues, which will hang down upon their breasts, corrupted blood flowing from their mouth like spittle, so that everybody shall detest them; these are the learned men and doctors whose actions contradict their sayings. The seventh will have their hands and feet cut off; these are they who have injured their neighbors. The eighth will be fixed to the trunks of palm trees or stakes of wood; these are the false accusers and informers. The ninth will stink worse than a corrupted corpse; these are they who have indulged their passions and voluptuous appetites, but refused God such part of their wealth as was due to him. The tenth will be clothed with garments daubed with pitch; these are the proud, the vainglorious and the arrogant.

As to the place where they are to be assembled to judgment, the Koran and the traditions of Mohammed agree that it will be on the earth, but in what part of the earth it is not agreed. Some say their prophet mentioned Syria for the place, others, a white and even tract of land, without inhabitants or any signs of buildings. Al Ghazali imagines it will be a second earth, which he supposes to be of silver; and others an earth which has nothing in common with ours but the name, having, it is possible, heard something of the new heavens and new earth mentioned in Scripture, whence the Koran has this expression, "On the day wherein the earth shall be changed into another earth."

The end of the resurrection the Mohammedans declare to be that they who are so raised may give an account of their actions, and receive the reward thereof. And they believe that not only mankind, but the genii and irrational animals also, shall be judged on this great day; when the un-

armed cattle shall take vengeance on the horned, till entire satisfaction shall be given to the injured.

As to mankind, they hold that when they are all assembled together, they will not be immediately brought to judgment, but the angels will keep them in their ranks and order while they attend for that purpose; and this attendance some say is to last forty years, others seventy, others three hundred—nay, some say no less than fifty thousand years—each of them vouching their prophet's authority. During this space they will stand looking up to heaven, but without receiving any information thence, and are to suffer grievous torments, both the just and the unjust, though with manifest difference. For the limbs of the former shall shine gloriously, and their sufferings shall be light in comparison, and shall last no longer than the time necessary to say the appointed prayers; but the latter will have their faces obscured with blackness, and disfigured with all the marks of sorrow and deformity. What will then occasion not the least of their pain, is a wonderful and incredible sweat, which will even stop their mouths, and in which they will be immersed in various degrees according to their demerits, some to the ankles only, and some to the knees, some to the middle, some so high as their mouth, and others as their ears. And this sweat, they say, will be provoked not only by that vast concourse of all sorts of creatures mutually pressing and treading on one another's feet, but by the near and unusual approach of the sun, which will be then no farther from them than the distance of a mile, or (as some translate the word, the signification of which is ambiguous) than the length of a bodkin. So that their skulls will boil like a caldron and they will be bathed in sweat. From this inconvenience, however, the good will be protected by the shade of God's throne; but the wicked will be so miserably tormented with it, and also with hunger and thirst and a stifling air, that they will cry out, Lord, deliver us from this anguish, though thou send us into hell-fire. What they assert of the extraordinary heat of the sun on this occasion the Mohammedans certainly borrowed from the Jews, who say that, for the punishment of the wicked on the last day, that planet shall be drawn forth from its sheath, in which it is now put uplest it should destroy all things by its excessive heat.

When those who have risen shall have waited the limited time, the Mohammedans believe God will at length appear to judge them, Mohammed undertaking the office of intercessor, after it shall have been declined by Adam, Noah, Abraham and Jesus, who shall beg deliverance only for their own souls. They say that on this solemn occasion God will come in the clouds, surrounded by angels, and will produce the books in which the actions of every person are recorded by their guardian angels, and will command the prophets to bear witness against those to whom they have been respectively sent. Then every one will be examined concerning all his words and actions, uttered and done by him in this life. The particulars of which they shall give an account, as Mohammed himself enumerated them, are, of their time, how they spend it, of their wealth, by what means they acquired it and how they employed it, of their bodies, wherein they exercised them, of their knowledge and learning, what use they made of them. To the questions it is said that each person shall answer, and make his defence in the best manner he can, endeavoring to excuse himself by casting the blame of his evil deeds on

others; so that a dispute shall arise even between the soul and the body, to which of them their guilt ought to be imputed, the soul saying, "O Lord, my body I received from thee; for thou createdst me without a hand to lay hold with, a foot to walk with, an eye to see with, or an understanding to apprehend with, till I came and entered into this body; therefore punish it eternally, but deliver me." The body, on the other side, will make this apology, "O Lord, thou createdst me like a stock of wood, having neither hand that I could lay hold with, nor foot that I could walk with, till this soul, like a ray of light, entered into me, and my tongue began to speak, my eye to see, and my foot to walk; therefore punish it eternally, but deliver me." But God will propound to them the following parable of the blind man and the lame man, which, as well as the preceding dispute, was borrowed by the Mohammedans from the Jews. A certain king having a pleasant garden, in which were ripe fruits, set two persons to keep it, one of whom was blind and the other lame, the former not being able to see the fruit, nor the latter to gather it; the lame man, however, seeing the fruit, persuaded the blind man to take him upon his shoulders, and by that means he easily gathered the fruit, which they divided between them. The lord of the garden coming some time after, and inquiring after his fruit, each began to excuse himself; the blind man said he had no eyes to see with, and the lame man that he had no feet to approach the trees. But the king, ordering the lame man to be set on the blind, passed sentence on and punished them both. And in the same manner will God deal with the body and the soul. As these apologies will not avail on that day, so will it also be in vain for any one to deny his evil actions, since men and angels and his own members—nay, the very earth itself—will be ready to bear witness against him.

Though the Mohammedans assign so long a space for the attendance of the resuscitated before their trial, yet they tell us the trial itself will be over in much less time, and will last no longer than while one may milk an ewe, or than the space between two milkings of a she-camel. Some, explaining these words so frequently used in the Koran, "God will be swift in taking an account," say that he will judge all creatures in the space of half a day, and others that it will be done in less time than the twinkling of an eye.

To show the exact justice which will be observed on this great day of trial, the next thing they describe is the balance wherein all things shall be weighed. They say it will be held by Gabriel, and that it is of so vast a size that its two scales, one of which hangs over paradise and the other over hell, are capacious enough to contain both heaven and earth. Though some are willing to understand what is said in the Koran concerning this balance allegorically, and only as a figurative representation of God's equity, yet the more ancient and orthodox opinion is that it is to be taken literally; and since words and actions, being mere accidents, are not capable of being themselves weighed, they say that the books in which they are recorded will be thrown into the scales, and according as those wherein the good or the evil actions are recorded shall preponderate, sentence will be given; those whose balances laden with their good works shall be heavy will be saved, but those whose balances are light will be condemned. Nor will any one have cause to complain that God suffers any good action to pass unrewarded, because

the wicked for the good they do have their reward in this life, and therefore can expect no favor in the next.

The old Jewish writers make mention of the books to be produced at the last day, in which men's actions are registered, as well as of the balance in which they shall be weighed; and the Scripture itself seems to have given the first notion of both. But what the Persian Magi believe of the balance comes nearest to the Mohammedan opinion. They hold that on the day of judgment two angels, named Mihr and Soroush, will stand on a bridge, described hereafter, to examine every person as he passes; that the former, who represents the divine mercy, will hold a balance in his hand to weigh the actions of men; that according to the report he shall make thereof to God sentence will be pronounced, and those whose good works are found more ponderous, if they turn the scale but by the weight of a hair, will be permitted to pass forward to paradise; but those whose good works shall be found light will be by the other angel, who represents God's justice, precipitated from the bridge into hell.

This examination being over, and every one's works weighed in a just balance, that mutual retaliation will follow according to which every creature will take vengeance one of another or have satisfaction made them for the injuries which they have suffered. And since there will then be no other way of returning like for like, the manner of giving this satisfaction will be by taking away a proportionable part of the good works of him who offered the injury and adding it to those of him who suffered it; which being done, if the angels say, "Lord, we have given to every one his due, and there remaineth of this person's good works so much as equaleth the weight of an ant," God will of his mercy cause it to be doubled unto him, that he may be admitted into paradise; but if, on the contrary, his good works be exhausted, and there remain evil works only, and there be any who have not yet received satisfaction from him, God will order that an equal weight of their sins be added unto his, that he may be punished for them in their stead, and he will be sent to hell laden with both. This will be the method of God's dealing with mankind. As to brutes, after they shall have likewise taken vengeance of one another, as we have mentioned above, he will command them to be changed into dust, wicked men being reserved to more grievous punishment, so that they shall cry out, on hearing this sentence pronounced on the brutes, "Would to God that we were dust also!" As to the genii, many Mohammedans are of opinion that such of them as are true believers will undergo the same fate as the irrational animals, and have no other reward than the favor of being converted into dust; and for this they quote the authority of their prophet. But this, however, is deemed not so very reasonable, since the genii, being capable of putting themselves in the state of believers as well as men, must consequently deserve, as it seems, to be rewarded for their faith as well as to be punished for their infidelity. Wherefore some entertain a more favorable opinion, and assign the believing genii a place near the confines of paradise, where they will enjoy sufficient felicity, though they be not admitted into that delightful mansion. But the unbelieving genii, it is universally agreed, will be punished eternally, and be thrown into hell with the infidels of mortal race. It may not be improper to observe that under the denomination of unbelieving genii the Moham-

medans comprehend also the devil and his companions.

The trials being over and the assembly dissolved, the Mohammedans hold that those who are to be admitted into paradise will take the right hand way, and those who are destined to hell-fire will take the left, but both of them must first pass the bridge, called in Arabic al Sirat, which they say is laid over the midst of hell, and describe to be finer than a hair and sharper than the edge of a sword. They also declare that this bridge is beset on each side with briars and hooked thorns, which will, however, be no impediment to the good, for they shall pass with wonderful ease and swiftness, Mohammed and his Moslems leading the way, whereas the wicked, by reason of the slipperiness and narrowness of the path, the entangling of the thorns and the extinction of the light which directed the former to paradise, will soon miss their footing and fall down headlong into hell, gaping beneath them.

As to the punishment of the wicked, the Mohammedans are taught that hell is divided into seven apartments, one below another, designed for the reception of as many distinct classes of the damned. The first, which they call Jehennam, will be the receptacle of those who acknowledged one God—that is, the wicked Mohammedans, who, after having there been punished according to their demerits, will at length be released. The second, named Ladha, they assign to the Jews; the third, named al Hotama, to the Christians; the fourth, named al Sair, to the Sabians; the fifth, named Sakar, to the Magians; the sixth, named al Jahim, to the idolaters; and the seventh, which is the lowest and worst of all, and is called al Hawiyat, to the hypocrites, or those who outwardly professed some religion, but in their hearts had none. Over each of these apartments they believe there will be set a guard of angels, nineteen in number, to whom the damned will confess the just judgment of God, and beg them to intercede with him for some alleviation of their pain, or that they may be delivered by being annihilated.

Mohammed has in his Koran and traditions been very exact in describing the various torments of hell, which, according to him, the wicked will suffer both from intense heat and excessive cold. We shall, however, enter into no detail of them here, but only observe that the degrees of these pains will also vary in proportion to the crimes of the sufferer and the apartment he is condemned to, and that he who is punished most lightly of all will be shod with shoes of fire, the heat of which will cause his skull to boil like a caldron. It must be remarked, however, that infidels alone will be liable to eternity of damnation, for the Moslems, or those who have embraced the true religion, and have been guilty of heinous sins, will be delivered thence after they shall have expiated their crimes by their sufferings. The time which these believers shall be detained there, according to a tradition handed down from their prophet, will not be less than nine hundred years, nor more than seven thousand. And as to the manner of their delivery, they say that they shall be distinguished by the marks of prostration on those parts of their bodies with which they used to touch the ground in prayer, and over which the fire will therefore have no power; and that being known by this characteristic, they will be released by the mercy of God, at the intercession of Mo-

ammed and the blessed; whereupon those who shall have been dead will be restored to life, as has been said, and those whose bodies shall have contracted any sootiness or filth from the flames and smoke of hell will be immersed in one of the rivers of paradise, called the river of life, which will wash them whiter than pearls.

Before we proceed to a description of the Mohammedan paradise, we must not forget to say something of the wall or partition which they imagine to be between that place and hell, and seems to be copied from the great gulf of separation mentioned in Scripture. They call it al Orf, and more frequently in the plural, al Araf. The Mohammedan writers greatly differ as to the persons who are to be found on al Araf. Some imagine it to be a sort of limbo for the patriarchs and prophets, or for the martyrs and those who have been most eminent for sanctity, among whom they say there will be also angels in the form of men. Others place here those whose good and evil works are so equal that they exactly counterpoise each other, and therefore deserve neither reward nor punishment; and these, they say, will on the last day be admitted into paradise, after they shall have performed an act of adoration, which will be imputed to them as a merit, and will make the scale of their good works to overbalance. Others suppose this intermediate space will be a receptacle for those who have gone to war without their parents' leave, and therein suffered martyrdom, being excluded paradise for their disobedience, and escaping hell because they are martyrs. The breadth of this partition wall cannot be supposed to be very great, since not only those who shall stand thereon will hold conference with the inhabitants both of paradise and of hell, but the blessed and the damned themselves will also be able to talk to one another.

The righteous, as the Mohammedans are taught to believe, having surmounted the difficulties and passed the sharp bridge above mentioned, before they enter paradise will be refreshed by drinking at the pond of their prophet, who describes it to be an exact square, of a month's journey in compass, its water, which is supplied by two pipes from al Cawthar, one of the rivers of paradise, being whiter than milk or silver and more odoriferous than musk, with as many cups set around it as there are stars in the firmament, of which water whoever drinks will thirst no more for ever. This is the first taste which the blessed will have of their future and now near approaching felicity.

Though paradise be so frequently mentioned in the Koran, yet it is a dispute among the Mohammedans whether it be already created or to be created hereafter. However, the orthodox maintain that it was created even before the world, and describe it, from their prophet's traditions, in the following manner:

They say it is situated above the seven heavens (or in the seventh heaven), and next under the throne of God; and to express the amenity of the place tell us that the earth of it is of the finest wheat flour, or of the purest musk, or, as others will have it, of saffron; that its stones are pearls and jacinths, the walls of its buildings enriched with gold and silver, and that the trunks of all its trees are of gold, among which the most remarkable is the tree called Tuba, or the tree of happiness. This tree, they say, stands in the palace of Mohammed, though a branch of it will reach to the house of every true believer; that it will be laden with pomegranates, grapes, dates and other fruits of surprising size and of taste unknown to mortals.

As plenty of water is one of the greatest additions to the pleasantness of any place, the Koran often speaks of the rivers of paradise as a principal ornament thereof; some of these rivers, they say, flow with water, some with milk, some with wine and others with honey; all taking their rise from the root of the tree Tuba; two of which rivers, named al Cawthar and the river of life, we have already mentioned. And lest these should not be sufficient, we are told this garden is also watered by a great number of smaller springs and fountains, whose pebbles are rubies and emeralds, their earth of camphire, their beds of musk and their sides of saffron; the most remarkable among them being Salsabil and Tasnim.

But all these glories will be eclipsed by the resplendent and ravishing girls of paradise, called, from their large black eyes, Hur al oyan, the enjoyment of whose company will be a principal felicity of the faithful. These, they say, are created, not of clay, as mortal women are, but of pure musk, being, as their prophet often affirms in his Koran, free from all natural impurities, defects and inconveniences incident to the sex, of the strictest modesty, and secluded from public view in pavilions of hollow pearls of immense size.

The name which the Mohammedans usually give to their happy mansion is al Jannat or the garden; and sometimes they call it, with an addition, Jannat al Ferdaws, the garden of paradise, Jannat Aden, the garden of Eden, Jannat al Mawa, the garden of abode, Jannat al Naim, the garden of pleasure, and the like; by which several names some understand so many different gardens, or at least places of different degrees of felicity, the very meanest of which will afford its inhabitants so many pleasures and delights that one would conclude they must even sink under them, had not Mohammed declared that, in order to qualify the blessed for a full enjoyment of them, God will give to every one the abilities of a hundred men.

We have already described Mohammed's pond, of which the righteous are to drink before their admission into this delicious seat; besides which some authors mention two fountains, springing from under a certain tree near the gate of paradise, and say that the blessed will also drink of one of them, to purge their bodies and carry off all excrementitious dregs, and will wash themselves in the other. When they are arrived at the gate itself, each person will there be met and saluted by the beautiful youths appointed to serve and wait upon him, one of them running before to carry the news of his arrival to the wives destined for him, and also by two angels, bearing the presents sent him by God, one of whom will invest him with a garment of paradise, and the other will put a ring on each of his fingers, with inscriptions on them alluding to the happiness of his condition. By which of the eight gates (for so many they suppose paradise to have) they are respectively to enter, is not worth inquiry; but it must be observed that Mohammed has declared that no person's good works will gain him admittance, and that even himself shall be saved, not by his merits, but merely by the mercy of God. It is, however, the constant doctrine of the Koran that the felicity of each person will be proportioned to his deserts, and that there will be abodes of different degrees of happiness, the most eminent degree being reserved for the prophets, the second for the doctors and teachers of God's worship, the next for the martyrs, and the lower for the rest of the righteous, according to their several merits. There will also be some distinction made in respect to the

time of their admission, Mohammed having affirmed that the poor will enter paradise five hundred years before the rich; nor is this the only privilege which they will enjoy in the next life, since he has also declared that when he took a view of paradise he saw the majority of its inhabitants to be the poor, and when he looked down into hell he saw the greater part of the wretches confined there to be women.

For the first entertainment of the blessed on their admission, they say that the whole earth will then be as one loaf of bread, which God will reach to them with his hand, holding it like a cake; and that for meat they will have the ox Balan and the fish Nun, the lobes of whose livers will suffice for seventy thousand men, being, as some imagine, to be set before the principal guests, viz., those who, to that number, will be admitted into paradise without examination, though others suppose that a definite number is here put for an indefinite, and that nothing more is meant than to express a great multitude of people.

From this feast every one will be dismissed to the mansion designed for him, where (as has been said) he will enjoy such a share of felicity as will be proportioned to his merits, but will vastly exceed comprehension or expectation, since the very meanest in paradise will have eighty thousand servants, seventy-two wives of the girls of paradise, besides the wives he had in this world, and a tent erected for him of pearls, jacinths and emeralds, and according to another tradition will be waited on by three hundred attendants while he eats, will be served in dishes of gold, whereof three hundred shall be set before him at once, containing each a different kind of food, the last morsel of which will be as grateful as the first, and will also be supplied with as many kinds of liquors in vessels of the same metal; and, to complete the entertainment, there will be no lack of wine, which, though forbidden in this life, will yet be freely allowed to be drunk in the next, and without danger, since the wine of paradise will not inebriate.

The magnificence of the garments and furniture promised by the Koran to the godly in the next life corresponds to the delicacy of their diet; for they are to be clothed in the richest silks and brocades, chiefly of green, which will burst forth from the fruits of paradise, and will be also supplied by the leaves of the tree Tuba; they will be adorned with bracelets of gold and silver, and crowns set with pearls of incomparable lustre; and will make use of silken carpets, litters of a prodigious size, couches, pillows and other rich furniture embroidered with gold and precious stones.

That we may the more readily believe what has been mentioned of the extraordinary capacity of the inhabitants of paradise to taste these pleasures in their height, it is said they will enjoy a perpetual youth; that in whatever age they happen to die they will be raised in their prime and vigor—that is, of about thirty years of age, which age they will never exceed—and that when they enter paradise they will be of the same stature with Adam, who, as they say, was sixty cubits high. And to this age and stature their children shall immediately attain, according to that saying of their prophet, "If any of the faithful in paradise be desirous of issue, it shall be conceived, born and grown up within the space of an hour." And in the same manner, if any one shall have a fancy to employ himself in agriculture, what he shall sow will spring up and come to maturity in a moment.

Lest any of the senses should want their appropriate delight, we are told the ear will be entertained not only with the ravishing songs of the angel Israfil and of the daughters of paradise, but even the trees themselves will celebrate the divine praises with a harmony exceeding whatever mortals have heard, to which will be joined the sound of the bells hanging on the trees, which will be put in motion by the wind proceeding from the throne of God, so often as the blessed wish for music—nay, the very clashing of the golden-bodied trees, whose fruits are pearls and emeralds, will surpass human imagination.

Before we quit this subject, it may not be improper to observe the falsehood of a vulgar imputation on the Mohammedans, who are by several writers reported to hold that women have no souls, or if they have that they will perish like those of brute beasts and will not be rewarded in the next life. But whatever may be the opinion of some ignorant people among them, it is certain that Mohammed had too great a respect for the fair sex to teach such a doctrine; and there are several passages in the Koran which affirm that women in the next life will not only be punished for their evil actions, but will also receive the rewards of their good deeds, as well as the men, and that in this case God will make no distinction of sexes. It is true the general notion is that they will not be admitted into the same abode as the men are, because their places will be supplied by the paradisaical females, but that good women will go into a separate place of happiness, where they will enjoy all sorts of delights. But whether one of those delights will be the enjoyment of agreeable paramours created for them to complete the economy of the Mohammedan system is what we have nowhere found decided. One circumstance relating to these beatified females, corresponding to what he had asserted of the men, he acquainted his followers with in the answer he returned to an old woman, who, desiring him to intercede with God that she might be admitted into paradise, was told that no old woman would enter that place, which setting the poor old woman a-crying, he explained himself by saying that God would make her young again.

The sixth great point of faith which the Mohammedans are taught by the Koran to believe is God's absolute decree and predestination both of good and evil, for the orthodox doctrine is that whatever has or shall come to pass in this world, whether it be good or bad, proceeds entirely from the divine will, and is irrevocably fixed and recorded from all eternity in the preserved table.

Of this doctrine Mohammed makes great use in his Koran for the advancement of his designs, encouraging his followers to fight even desperately for the propagation of their faith, by representing to them that all their caution could not avert their inevitable destiny or prolong their lives for a moment, and deterring them from disobeying or rejecting him as an impostor by setting before them the danger they might thereby incur of being, by the judgment of God, abandoned to hardness of heart and a reprobate mind as a punishment for their obstinacy.

As this doctrine of absolute election and reprobation has been thought by many of the Mohammedan divines to be derogatory to the goodness and justice of God, and to make God the author of evil, several subtle distinctions have been invented and disputes raised to explain or soften it; and different sects have been formed according to their several opinions or methods of explaining

this point, some of them going so far as even to hold the contrary position of absolute free will in man.

Of the four fundamental points of religious practice required by the Koran, the first is prayer, under which are also comprehended those legal washings or purifications which are necessary preparations thereto.

Of these purifications there are two degrees, one called "ghost," being a total immersion or bathing of the body in water, and the other called "wudu" (by the Persians "abdest"), which is the washing of their faces, hands and feet after a certain manner. The first is required in some extraordinary cases only; the latter is the ordinary ablution in common cases and before prayer, and must necessarily be used by every person before he can enter upon that duty.

These purifications were perhaps borrowed by Mohammed of the Jews—at least they agree in a great measure with those used by that nation, who in process of time burdened the precepts of Moses in this point with so many traditional ceremonies that whole books have been written about them, and who were so exact and superstitious in their observance even in our Saviour's time that they were often reproved by him for it. But as it is certain that the pagan Arabs used lustrations of this kind long before the time of Mohammed, as most nations did and still do in the East, where the warmth of the climate requires a great degree of cleanliness, perhaps Mohammed only recalled his countrymen to a more strict observance of those purifying rites which had been probably neglected by them, or at least performed in a careless manner. The Mohammedans, however, insist that they are as ancient as Abraham, who, they say, was enjoined by God to observe them, and was shown the manner of making the ablution by the angel Gabriel in the form of a beautiful youth.

That his followers might be the more punctual in this duty, Mohammed is said to have declared that the practice of religion is founded on cleanliness, which is the one half of the faith and the key of the prayer, without which it will not be heard by God. That these expressions may be the better understood, al Ghazali reckons four degrees of purification, of which the first is the cleansing of the body from all pollution, filth and excrements; the second the cleansing of the members of the body from all wickedness and unjust actions; the third the cleansing of the heart from all blamable inclinations and odious vices; and the fourth the purging of a man's secret thoughts from all affections which may divert their attendance on God, adding that the body is but as the outward shell in respect to the heart, which is as the kernel. And for this reason he complains of those who are superstitiously solicitous in external purifications, avoiding those persons as unclean who are not so scrupulously nice as themselves, and at the same time have their minds lying waste and overrun with pride, ignorance and hypocrisy. Whence it plainly appears with how little foundation the Mohammedans have been charged by some writers with teaching or imagining that these formal washings alone cleanse them from their sins.

Lest so necessary a preparation to their devotions should be omitted either where water cannot be had or when it may be hurtful to a person's health, they are allowed in such cases to make use of fine sand or dust in lieu of it, and then they perform this duty by clapping their open hands

on the sand and then passing them over the parts in the same manner as if they were dipped in water. For this expedient Mohammed was not so much indebted to his own cunning as to the example of the Jews, or perhaps that of the Persian Magi, almost as scrupulous as the Jews themselves in their lustrations, both of whom prescribe the same method in cases of necessity; and there is a famous instance in ecclesiastical history of sand being used for the same reason, instead of water, in the administration of the Christian sacrament of baptism, many years before Mohammed's time.

Neither are the Mohammedans contented with bare washing, but think themselves obliged to attend to several other necessary points of cleanliness, which they make also parts of their duty, such as combing the hair, cutting the beard, paring the nails, pulling out the hairs of their arm-pits and circumcision.

Circumcision, though not once mentioned in the Koran, is yet held by the Mohammedans to be an ancient divine institution confirmed by the religion of Islam, and though not absolutely necessary yet highly proper and expedient. The Arabs used this rite for many ages before Mohammed, having probably learned it from Ishmael, though the Hamyarites and other tribes practiced the same. The Ismaelites we are told used to circumcise their children, not on the eighth day, as is the custom of the Jews, but when about twelve or thirteen years old, at which age their father underwent that operation; and the Mohammedans imitate them so far as not to circumcise children before they be able at least distinctly to pronounce that profession of their faith, There is no God but God; Mohammed is the apostle of God, but fix on what age they please for the purpose between six and sixteen, or thereabouts. Though Moslem doctors are generally of opinion that this precept was originally given to Abraham, yet some have imagined that Adam was taught it by the angel Gabriel to satisfy an oath he had made to cut off that flesh which, after his fall, had rebelled against his spirit, from which an odd argument has been drawn for the universal obligation of circumcision.

Prayer was by Mohammed thought so necessary a duty that he used to call it the pillar of religion and the key of paradise; and when the Thakifites, who dwelt at Tayef, sending in the ninth year of the Hejra to make their submission to that prophet, after the keeping of their favorite idol had been denied them, begged at least that they might be dispensed with as to their saying of the appointed prayers, he answered, That there could be no good in that religion wherein was no prayer.

That so important a duty, therefore, might not be neglected, Mohammed obliged his followers to pray five times every twenty-four hours at certain stated times, viz., 1. In the morning before sunrise. 2. When noon is past and the sun begins to decline from the meridian. 3. In the afternoon before sunset. 4. In the evening after sunset, and before the day be shut in. And, 5. After the day is shut in and before the first watch of the night. For this institution he pretended to have received the divine command from the throne of God himself when he took his night journey to heaven; and the observance of the stated times of prayer is frequently insisted on in the Koran, though they are not particularly prescribed. Accordingly, at the aforesaid times, of which public notice is given by the criers from the steeples of their mosques (for they use no bell), every conscientious Moslem prepares himself for prayer, which he performs either in the mosque or any other place, provided

it be clean after a prescribed form, and with a certain number of praises or ejaculations and using certain postures of worship.

For the regular performance of the duty of prayer among the Mohammedans it is also requisite that they turn their faces while they pray toward the temple of Mecca, the quarter where the same is situate being for that reason pointed out within their mosques by a niche which they call al Mehrah, and without by the situation of the doors opening into the galleries of the steeples. There are also tables calculated for readily finding out their Kebab, or part toward which they ought to pray, in places where they have no other direction.

But what is principally to be regarded in the discharge of this duty, say the Moslem doctors, is the inward disposition of the heart, which is the life and spirit of prayer, the most punctual observance of the external rites and ceremonies before mentioned being of little or no avail if performed without due attention, reverence, devotion and hope.

There are two things further which deserve mention on this head, and may, perhaps, be better defended than our own practice. One is that the Mohammedans never address themselves to God in sumptuous apparel, but lay aside their costly habits and pompous ornaments, if they wear any, when they approach the divine presence, lest they should seem proud and arrogant. The other is that they do not admit their women to pray with them in public, that sex being obliged to perform their devotions at home, or if they visit the mosques it must be at a time when the men are not there; for the Moslems are of opinion that their presence inspires a different kind of devotion from that which is requisite in a place dedicated to the worship of God.

The next point of the Mohammedan religion is the giving of alms, which are of two sorts, legal and voluntary. The legal alms are of indispensable obligation, being commanded by the law, which directs and determines both the amount to be given and the things to be given; but the voluntary alms are left to every one's liberty, to give more or less, as he shall see fit.

The giving of alms is frequently commanded in the Koran, and often recommended jointly with prayer, the former being held of great efficacy in causing the latter to be heard of God; for which reason the khalif Omar Ebn Abd'alaziz used to say "that prayer carries us halfway to God, fasting brings us to the door of his palace and alms procure us admission." The Mohammedans therefore esteem alms-deeds to be highly meritorious, and many of them have been illustrious for the exercise of them. Hasan, the son of Ali and grandson of Mohammed, in particular, is related to have thrice in his life divided his substance equally between himself and the poor, and twice to have given away all he had; and the generality are so addicted to doing good that they extend their charity even to brutes.

Alms, according to the prescriptions of the Mohammedan law, are to be given of five things: 1. Of cattle—that is to say, of camels, kine and sheep; 2. Of money; 3. Of corn; 4. Of fruits—viz., dates and raisins; and 5. Of wares sold. Of each of these a certain portion is to be given in alms, being usually two and a half per cent. But no alms are due for them unless they amount to a certain quantity or number, nor until a man has been in possession of them eleven months, he not being obliged to give alms thereout before the

twelfth month is begun; nor are alms due for cattle employed in tilling the ground or in carrying of burdens. In some cases a much larger portion than that mentioned is reckoned due for alms; thus of what is gotten out of mines, or the sea, or by any art or profession over and above what is sufficient for the reasonable support of a man's family, and especially where there is a mixture or suspicion of unjust gain, a fifth part ought to be given in alms. Moreover, at the end of the fast of Ramadan every Moslem is obliged to give in alms for himself and for every one of his family, if he has any, a measure of wheat, barley, dates, raisins, rice or other provisions commonly eaten.

The legal alms were at first collected by Mohammed himself, who employed them as he thought fit, in the relief of his poor relations and followers; but chiefly he applied them to the maintenance of those who served in his wars and fought, as he termed it, in the way of God. His successors continued to do the same till, in process of time, other taxes and tributes being imposed for the support of the government, they seem to have been weary of acting as almoners to their subjects and to have left the payment of them to their consciences.

The third point of religious practice is fasting, a duty of so great importance that Mohammed used to say it was "the gate of religion," and that "the odor of the mouth of him who fasteth is more grateful to God than that of musk;" and al Ghazali reckons fasting "one fourth part of the faith." According to the Mohammedan divines, there are three degrees of fasting: 1. Restraining the belly and other parts of the body from satisfying their lusts; 2. Restraining the ears, eyes, tongue, hands, feet and other members from sin; and 3. The fasting of the heart from worldly cares and thoughts.

The Mohammedans are obliged, by the express command of the Koran, to fast the whole month of Ramadan from the time the new moon first appears till the appearance of the next new moon, during which time they must abstain from eating and drinking from daybreak till night or sunset. And this injunction they observe so strictly that while they fast they suffer nothing to enter their mouths or other parts of their body, esteeming the fast broken and null if they smell perfumes, take a clyster or injection, bathe or even purposely swallow their spittle, some being so cautious that they will not open their mouths to speak lest they should breathe the air too freely. The fast is also deemed void if a man kiss or touch a woman or if he vomit designedly. But after sunset they are allowed to refresh themselves and to eat and drink freely, though the more rigid begin the fast again at midnight. This fast is extremely rigorous and mortifying when the month of Ramadan happens to fall in summer, the length and heat of the days making the observance of it much more difficult and uneasy than in winter.

From the fast of Ramadan none are excused except travelers and sick persons; but they are obliged, so soon as the impediment is removed, to fast an equal number of other days; and the breaking the fast is ordered to be expiated by giving alms to the poor.

The pilgrimage to Mecca is so necessary a point of practice that, according to a tradition of Mohammed, he who dies without performing it may as well die a Jew or a Christian; and the same is expressly commanded in the Koran. Before we

speak of the time and manner of performing this pilgrimage, it may be proper to give a short account of the temple of Mecca, the chief scene of the Mohammedan worship.

The temple of Mecca stands in the midst of the city, and is honored with the title of Masjid al alharam—i. e., the sacred or inviolable temple. That which is principally revered in this place, and gives sanctity to the whole, is a square stone building, called the Caaba, as some fancy from its height, which surpasses that of the other buildings of Mecca, but more probably from its quadrangular form, and Beit Allah—i. e., the house of God—being peculiarly hallowed and set apart for his worship. The length of this edifice, from north to south, is twenty-four cubits, its breadth from east to west twenty-three cubits, and its height twenty-seven cubits; the door, which is on the east side, stands about four cubits from the ground, the floor being level with the bottom of the door. In the corner next this door is the black stone, which we shall notice by and by. On the north side of the Caaba, within a semicircular enclosure fifty cubits long, lies the white stone, said to be the sepulchre of Ismael, which receives the rain-water that falls off the Caaba by a spout, formerly of wood, but now of gold. The Caaba has a double roof, supported within by three octagonal pillars of aloes wood, between which, on a bar of iron, hang some silver lamps. The outside is covered with rich black damask, adorned with an embroidered band of gold, which is changed every year, and was formerly sent by the khalifs, afterward by the sultans, of Egypt, and is now provided by the Turkish emperors. At a small distance from the Caaba, on the east side, is the station or place of Abraham, where is another stone much respected by the Mohammedans, of which something will be said hereafter.

The Caaba, at some distance, is nearly surrounded by a circular enclosure of pillars joined toward the bottom by a low balustrade, and toward the top by bars of silver. Just without this inner enclosure, on the south, north and west sides of the Caaba, are three buildings, which are the oratories or places where three of the orthodox sects assemble to perform their devotions (the fourth sect, viz., that of al Shafei, making use of the station of Abraham for that purpose); and toward the south-east stands the edifice which covers the well Zemzem, the treasury and the cupola of al Abbas.

All these buildings are enclosed, at a considerable distance, by a magnificent piazza or square colonnade, covered with small domes or cupolas, from the four corners of which rise as many minarets or steeples, with double galleries, and adorned with gilded spires and crescents, as are the cupolas which cover the piazza and the other buildings. Between the pillars of both enclosures hang a great number of lamps, which are constantly lighted at night. The first foundations of this outward enclosure were laid by Omar, the second khalif, who built no more than a low wall, to prevent the court of the Caaba, which before lay open, from being encroached on by private buildings; but the structure has been since raised, by the liberality of many succeeding princes and great men, to its present lustre.

This is properly all that is called the temple; but the whole territory of Mecca being also Haram or sacred, there is a third enclosure, distinguished at certain distances by small turrets, some five, some seven and others ten miles distant from the city. Within this compass of ground it is not

lawful to attack an enemy, or even to hunt or fowl, or cut a branch from a tree.

The temple of Mecca was a place of worship and in singular veneration with the Arabs from great antiquity, and many centuries before Mohammed. Though it was most probably dedicated at first to an idolatrous use, yet the Mohammedans are generally persuaded that the Caaba is almost coeval with the world, for they say that Adam, after his expulsion from paradise, begged of God that he might erect a building like that he had seen there, called Beit al Mamur, or the frequented house, and al Dorah, toward which he might direct his prayers, and which he might compass as the angels do the celestial one. Whereupon God let down a representation of that house in curtains of light and set it in Mecca, perpendicularly under its original, ordering the patriarch to turn toward it when he prayed and to compass it by way of devotion. After Adam's death, his son Seth built a house in the same form, of stones and clay, which, being destroyed by the deluge, was rebuilt by Abraham and Ishmael, at God's command, in the place where the former had stood, and after the same model, they being directed therein by revelation.

After this edifice had undergone several repairs, it was a few years after the birth of Mohammed rebuilt by the Koreish on the old foundation, and afterward repaired by Abd'allah Ebn Zobeir, the khalif of Mecca, and at length again rebuilt by Yusof, surnamed al Hejaj Ebn Yussif, in the seventy-fourth year of the Hejra, with some alterations, in the form in which it now remains. Some years after, however, the khalif Haroun al Raschid intended again to change what had been altered by al Hejaj, and to reduce the Caaba to the old form in which it was left by Abd'allah, but was dissuaded from meddling with it, lest so holy a place should become the sport of princes, and being new-modeled after every one's fancy, should lose that reverence which was justly paid it. But notwithstanding the antiquity and holiness of this building, they have a prophecy, by tradition from Mohammed, that in the last times the Ethiopians shall come and utterly demolish it, after which it will not be rebuilt again for ever.

Before we leave the temple of Mecca, two or three particulars deserve further notice. One is the celebrated black stone, which is set in silver and fixed in the south-east corner of the Caaba, being that which looks toward Basra, about two cubits and one-third or seven spans from the ground. This stone is exceedingly respected by the Mohammedans, and is kissed by the pilgrims with great devotion, being called by some the right hand of God on earth. They say that it is one of the precious stones of paradise, and fell down to the earth with Adam; and being taken up again, or otherwise preserved at the Deluge, the angel Gabriel afterward brought it back to Abraham when he was building the Caaba. It was at first whiter than milk, but grew black long since by the touch of a menstruous woman, or, as others tell us, by the sins of mankind, or rather by the touches and kisses of so many people, the superficies only being black, and the inside still remaining white. When the Karmatians, among other profanations by them offered to the temple of Mecca, took away this stone, they could not be prevailed on for love or money to restore it, though the people of Mecca offered no less than five thousand pieces of gold for it. However, after they had kept it twenty-two years, seeing they could not thereby draw the pilgrims from Mecca, they sent it back of their

own accord, at the same time bantering its devotees by telling them it was not the true stone, but, as it is said, it was proved to be no counterfeit by its peculiar quality of swimming on water.

Another thing observable in this temple is the stone in Abraham's place, in which they pretend to show his footsteps, telling us he stood on it when he built the Caaba, and that it served him for a scaffold, rising and falling of itself as he had occasion, though another tradition says he stood upon it while the wife of his son Ishmael, to whom he paid a visit, washed his head. It is now enclosed in an iron chest, out of which the pilgrims drink the water of Zemzem, and are ordered to pray at it by the Koran. The officers of the temple took care to hide this stone when the Karmatians took the other.

The last thing we shall notice in the temple is the well Zemzem, on the east side of the Caaba, and which is covered with a small building and cupola. The Mohammedans believe that it is the very spring which gushed out for the relief of Ishmael when Hagar his mother wandered with him in the desert; and some pretend it was so named from her calling to him, when she spied it, in the Egyptian tongue, Zem, zem—that is, Stay, stay—though it seems rather to have had the name from the murmuring of its waters. The water of this well is regarded as holy, and is highly revered, being not only drunk with particular devotion by the pilgrims, but also sent in bottles to most parts of the Mohammedan dominions.

To this temple every Mohammedan who has health and means sufficient is expected once at least in his life to go on pilgrimage, nor are women excused from the performance of this duty. The pilgrims meet at different places near Mecca, according to the different districts from which they come, during the months of Shawal and Dhu'l-kaada, being obliged to be there by the beginning of Dhu'l-hajja, which month, as its name imports, is peculiarly set apart for the celebration of this solemnity.

At the places above mentioned the pilgrims properly commence such, when the men put on the sacred habit, which consists only of two woolen wrappers, one wrapped about their loins, and the other thrown over their shoulders, having their heads bare and a kind of slippers which cover neither the heel nor the instep, and so enter the sacred territory on their way to Mecca. While they have this habit on they must neither hunt nor fowl, which precept is so punctually observed that they will not kill even a louse or a flea, if they find it on their bodies; there are some noxious animals, however, which they have permission to kill during the pilgrimage, as kites, ravens, scorpions, mice, and dogs given to bite. During the pilgrimage it behooves a man to have a constant guard over his words and actions, and to avoid all quarreling or improper language, and all conversation with women, and to apply his whole mind to the good work he is engaged in.

The pilgrims, having arrived at Mecca, immediately visit the temple, and then enter on the performance of the prescribed ceremonies, which consist chiefly in going in procession round the Caaba, in running between the Mounts Safa and Merwa, in making the station on Mount Arafat, and slaying the victims and shaving their heads in the valley of Mina.

In compassing the Caaba, which they do seven times, beginning at the corner where the black stone is fixed, they use a short quick pace the first

three times they go round it, and a grave ordinary pace the last four, which it is said was ordered by Mohammed, that his followers might show themselves strong and active to cut off the hopes of the infidels, who declared that the immoderate heats of Medina had rendered them weak. But the aforesaid quick pace they are not obliged to use every time they perform this act of devotion, but only at some particular times. So often as they pass by the black stone they either kiss it or touch it with their hand, and kiss that.

The running between Safa and Merwa is also performed seven times, partly with a slow pace and partly running; for they walk slowly till they come to a place between two pillars, and there they run and afterward walk again, sometimes looking back and sometimes stooping, like one who has lost something, to represent Hagar seeking water for her son, for the ceremony is said to be as ancient as her time.

On the ninth of Dhu'l-hajja, after morning prayer, the pilgrims leave the valley of Mina, whither they came the day before, and proceed in a tumultuous manner to Mount Arafat, where they stay to perform their devotions till sunset; then they go to Mozdalifa, an oratory between Arafat and Mina, and there spend the night in prayer and reading the Koran. The next morning by daybreak they visit al Masher al haram, or the sacred monument, and departing thence before sunrise, hasten by Batn Mohasser to the valley of Mina, where they throw seven stones at three marks or pillars, in imitation of Abraham, who, meeting the devil in that place, and being by him disturbed in his devotions, or tempted to disobedience when he was going to sacrifice his son, was commanded by God to drive him away by throwing stones at him, though others pretend this rite to be as old as Adam, who also put the devil to flight in the same place and by the same means.

This ceremony being over, on the same day, the tenth of Dhu'l-hajja, the pilgrims slay their victims in this valley, of which they and their friends eat part and the rest is given to the poor. These victims must be either sheep, goats, kine or camels, males if of either of the two former kinds, and females if of either of the latter, and of a fit age. The sacrifices being over, they shave their heads and cut their nails, after which the pilgrimage is regarded as completed, though they again visit the Caaba to take their leave of that sacred building.

It is acknowledged by the Mohammedans themselves that the greater part of these rites are of no intrinsic worth, neither affecting the soul nor agreeing with natural reason, but altogether arbitrary, and commanded merely to try the obedience of mankind, without any farther view, and are therefore to be complied with, not that they are good in themselves, but because God has so appointed. Some, however, have endeavored to discover some reasons for the arbitrary injunctions of this kind; and one writer, supposing men ought to imitate the heavenly bodies, not only in their purity, but in their circular motion, seems to argue the procession round the Caaba to be therefore a rational practice. Reland has observed that the Romans had something like this in their worship, being ordered by Numa to use a circular motion in the adoration of the gods, either to represent the orbicular motion of the world or the perfecting of the whole office of prayer to that God who is Maker of the universe, or else in allusion to the Egyptian wheels, which were hieroglyphics of the instability of human fortune.

The pilgrimage to Mecca, and the ceremonies prescribed to those who perform it, are perhaps liable to greater exception than any other of Mohammed's institutions, not only as silly and ridiculous in themselves, but as relics of idolatrous superstition. Yet whoever seriously considers how difficult it is to make people submit to abolishing ancient customs, however unreasonable, which they are fond of, especially where the interest of a considerable party is also concerned, must excuse Mohammed's yielding some points of less moment to gain the principal. The temple of Mecca was held in the greatest veneration by the Arabs in general, and especially by those of Mecca, who had a particular interest to support that veneration; and as the most silly and insignificant things are generally the objects of the greatest superstition, Mohammed found it much easier to abolish idolatry itself than to eradicate the superstitious bigotry with which they were addicted to that temple and the rites performed there; wherefore, after several fruitless trials to wean them therefrom, he thought it best to compromise the matter, and rather than frustrate his whole design to allow them to go on pilgrimage thither and to direct their prayers thereto, contenting himself with transferring the devotions there paid from their idols to the true God.

#### V. Of certain Negative Precepts in the Koran.

Having spoken of the fundamental points of the Mohammedan religion, relating both to faith and to practice, we shall next speak of some other precepts and institutions of the Koran which deserve peculiar notice.

The drinking of wine, under which name all sorts of strong and inebriating liquors are comprehended, is forbidden in the Koran in more places than one. Some, indeed, have imagined that only excess is forbidden, and that the moderate use of wine is allowed; but the received opinion is that to drink any strong liquors, either in a less quantity or in a greater, is absolutely unlawful; and the more conscientious are so strict, especially if they have performed the pilgrimage to Mecca, that they hold it unlawful not only to taste wine, but to press grapes for the making of it, to buy or to sell it, or even to maintain themselves with the money arising from the sale of the liquor.

It has been a question whether coffee does not come under the above-mentioned prohibition, because the fumes of it have some effect on the imagination. This drink, which was first publicly used at Aden, in Arabia Felix, about the middle of the ninth century of the Hejra, and thence gradually introduced into Mecca, Medina, Egypt, Syria and other parts of the Levant, has been the occasion of great disputes and disorders, having been sometimes publicly condemned and forbidden, and again declared lawful and allowed. At present the use of coffee is generally tolerated, if not permitted, as is that of tobacco, though the more religious make a scruple of taking the latter, not only because it inebriates, but also out of respect to a traditional saying of their prophet, That in the latter days there should be men who should bear the name of Moslems, but should not be really such, and that they should smoke a certain weed, which should be called tobacco; however, the Eastern nations are generally so addicted to both that they say a dish of coffee and a pipe of tobacco are a complete entertainment; and the Persians have a proverb that coffee without tobacco is meat without salt.

Several stories have been told as the occasion of Mohammed's prohibiting the drinking of wine; but the true reasons are given in the Koran, viz., because the bad qualities of that liquor exceed its good ones, the common effects being quarrels and disturbances in company and neglect, or at least indecencies, in the performance of religious duties. For these reasons it was that the priests were, by the Levitical law, forbidden to drink wine or strong drink when they entered the tabernacle, and that the Nazarites and Rechabites, and many pious persons among the Jews and primitive Christians, wholly abstained therefrom; nay, some of the latter went so far as to condemn the use of wine as sinful. But Mohammed is said to have had a nearer example than any of these in the more devout persons of his own tribe.

Gaming is prohibited by the Koran in the same passages, and for the same reasons, as wine. The word al Meisar, which is there used, signifies a particular manner of casting lots by arrows, much practiced by the pagan Arabs. But under the name of lots the commentators agree that all games whatsoever which are subject to hazard or chance are comprehended and forbidden, as dice, cards, tables, etc. And they are reckoned so bad in themselves that the testimony of him who plays at them is, by the more rigid, regarded as of no validity in a court of justice. Chess is almost the only game which the Mohammedan doctors admit to be lawful, because it depends wholly on skill, and not at all on chance; but then it is permitted under certain restrictions, viz., that it be no hindrance to the regular performance of their devotions, and that no money or other thing be played for, which last the Turks and Sunnites religiously observe, but the Persians and Mogols do not. But what Mohammed is supposed chiefly to have disliked in the game of chess was the carved pieces or men with which the pagan Arabs played, being little figures of men, elephants, horses and dromedaries; and these are thought by some commentators to be truly meant by the images prohibited in one of the passages of the Koran. That the Arabs in Mohammed's time actually used such images for chessmen appears from what is related in the Souna of Ali, who, passing accidentally by some who were playing at chess, asked what images they were which they were so intent upon, for they were perfectly new to him, that game having been but very lately introduced into Arabia, and not long before into Persia, whither it was first brought from India in the reign of Khosru Nushirwan. Hence the Mohammedan doctors infer that the game was disapproved only for the sake of the images; wherefore the Sunnites always play with plain pieces of wood or ivory, but the Persians and Indians, who are not so scrupulous, continue to make use of the carved ones.

The Mohammedans comply with the prohibition of gaming much better than they do with that of wine; for though the common people among the Turks more frequently, and the Persians more rarely, are addicted to play, yet the better class are seldom guilty of it.

Another practice of the idolatrous Arabs, forbidden also in the Koran, was that of divining by arrows. The arrows used by them for this purpose, like those with which they cast lots, were without heads or feathers, and were kept in the temple of some idol in whose presence they were consulted. Seven such arrows were kept at the temple of Mecca; but generally in divination they made use of three only, on one of which was written, My Lord hath commanded me; on another, My Lord

hath forbidden me; and the third was blank. If the first was drawn, they looked on it as an approbation of the enterprise in question; if the second, they came to a contrary conclusion; but if the third happened to be drawn, they mixed them and drew over again till a decisive answer was given by one of the others. These divining arrows were generally consulted before anything of moment was undertaken, as when a man was about to marry, or about to go on a journey.

A distinction of meats was so generally used by the Eastern nations that it is no wonder that Mohammed made some regulations in that matter. The Koran, therefore, prohibits the eating of blood and swine's flesh, and whatever dies of itself, or is slain in the name or honor of any idol, or is strangled, or killed by a blow or a fall, or by any other beast. In which particulars Mohammed seems chiefly to have imitated the Jews, by whose law, as is well known, all these things are forbidden; but he allowed some things to be eaten which Moses did not, as camels' flesh in particular. In cases of necessity, however, where a man may be in danger of starving, he is allowed by the Mohammedan law to eat any of the said prohibited kinds of food; and the Jewish doctors grant the same liberty in similar cases.

The eating of meat offered to idols we take to be commonly practiced by all idolaters, being looked on as a sort of communion in their worship, and for that reason regarded by Christians, if not absolutely unlawful, yet as the occasion of great scandal; but the Arabs were particularly superstitious in this matter, killing what they ate on stones erected on purpose round the Caaba, or near their own houses, and calling, at the same time, on the name of some idol. Swine's flesh, indeed, the old Arabs seem not to have eaten; and their prophet, in prohibiting the same, appears to have only confirmed the common aversion of the nation. Foreign writers tell us that the Arabs wholly abstained from swine's flesh, thinking it unlawful to feed thereon, and that very few, if any, of those animals are found in their country, because it does not produce proper food for them.

In the prohibition of usury Mohammed probably also followed the Jews, who are strictly forbidden by their law to exercise it among one another, though they are so infamously guilty of it in their dealing with those of a different religion; but we do not find the prophet of the Arabs has made any distinction in this matter.

Several superstitious customs relating to cattle, which seem to have been peculiar to the pagan Arabs, were also abolished by Mohammed. The Koran mentions four names by them given to certain camels or sheep, which for some particular reasons were left at free liberty, and were not made use of as other cattle of the same kind. These names are Bahira, Saiba, Wasila and Hami.

As to the first, it is said that when a she-camel or a sheep had borne young ten times, they used to slit her ears, and turn her loose to feed at full liberty; and when she died, her flesh was eaten by the men only, the women being forbidden to eat thereof; and such a camel or sheep, from the slitting of her ear, they called Bahira. Or the Bahira was a she-camel, which was turned loose to feed, and whose fifth young one, if it proved a male, was killed and eaten by men and women promiscuously, but if it proved a female had its ear slit, and was dismissed to free pasture, none being permitted to make use of its flesh or milk, or to ride on it, though the women were allowed to eat the flesh of it when it died, or it was the

female young of the Saiba, which was used in the same manner as its dam; or else an ewe, which had yeaned five times.

Saiba signifies a she-camel turned loose to go where she will. And this was done on various accounts, as when she had brought forth females ten times together, or in satisfaction of a vow; or when a man had recovered from sickness, or returned safe from a journey, or his camel had escaped some signal danger either in battle or otherwise. A camel so turned loose was declared to be Saiba, and as a mark of it one of the vertebrae was taken out of her back, after which none might drive her from pasture or water, or ride on her.

Wasila is explained to signify a she-camel which had brought forth ten times, or an ewe which had yeaned seven times, and every time twins; and if the seventh time she brought forth a male and a female, they said, *Wosilat akhaha—i. e.*, She is joined, or was brought forth with her brother—after which none might drink the dam's milk, except men only, and she was used as the Saiba. Or Wasila was particularly meant of sheep; as when an ewe brought forth a female, they took it to themselves, but when she brought forth a male, they consecrated it to their gods, but if both a male and a female, they said, She is joined to her brother, and did not sacrifice that male to their gods, or Wasila was an ewe which brought forth first a male and then a female, on which account, or because she followed her brother, the male was not killed; but if she brought forth a male only, they said, Let this be an offering to our gods.

Hami was a male camel used for a stallion, which, if the females had conceived ten times by him, was afterward freed from labor and let go loose, none driving him from pasture or from water; nor was any allowed to receive the least benefit from him, nor even to shear his hair.

These things were observed by the old Arabs in honor of their false gods and as part of the worship which they paid them, and were ascribed to divine institution, but are all condemned in the Koran and declared to be impious superstitions.

The law of Mohammed also put a stop to the inhuman custom which had been long practiced by the pagan Arabs of burying their daughters alive, lest they should be reduced to poverty by providing for them, or else to avoid the disgrace which would follow if they should happen to be made captives or to become scandalous by their behavior, the birth of a daughter being for these reasons considered a great misfortune, and the death of one as great a happiness. The manner of their doing this is differently related. Some say that when an Arab had a daughter born, if he intended to bring her up he sent her, clothed in a garment of wool or hair, to keep camels or sheep in the desert; but if he designed to put her to death, he let her live till she became six years old, and then said to her mother, "Perfume her and adorn her, that I may carry her to her mothers," which being done, the father led her to a well or pit dug for that purpose, and having bid her to look down into it, pushed her in headlong as he stood behind her, and then, filling up the pit, leveled it with the rest of the ground; but others say that when a woman was ready to fall in labor they dug a pit, on the brink of which she was to be delivered, and if the child happened to be a daughter, they threw it into the pit, but if a son, they saved it alive. This custom, though not observed by the Arabs in general, was yet very common among several of their tribes, and particularly those of Koreish and Kendah, the former

being in the habit of burying their daughters alive in Mount Abu Dalama, near Mecca. The Arabs, in thus murdering their children, were far from being singular, the practice of exposing infants and putting them to death being so common among the ancients that it is remarked as a thing very extraordinary in the Egyptians that they brought up all their children; and by the laws of Lycurgus no child was allowed to be brought up without the approbation of public officers. At this day, it is said, in China the poorer sort of people frequently put their children, the females especially, to death with impunity.

This wicked practice is condemned by the Koran in several passages, one of which, as some commentators judge, may also condemn another custom of the Arabians, altogether as wicked and as common among other nations of old—viz., the sacrificing of their children to their idols, as was frequently done, in particular in satisfaction of a vow they used to make, that if they had a certain number of sons born they would offer one of them in sacrifice.

Several other superstitious customs were likewise abrogated by Mohammed; but the same being of less moment, and not particularly mentioned in the Koran, or having been occasionally noticed elsewhere, we shall say nothing of them in this place.

#### VI. Of the Institutions of the Koran in Civil Affairs.

The Mohammedan civil law is founded on the precepts of the Koran, as the civil laws of the Jews were on those of the Pentateuch; yet they are variously interpreted, according to the different decisions of their civilians, and especially of their four great doctors, Abu Hanifa, Malee, al Shafei and Ebn Hanbal. We can only give here a summary view of the principal institutions, without minutely entering into a detail of particulars, and shall begin with those relating to marriage and divorce.

That polygamy, for the moral lawfulness of which the Mohammedan doctors advance several arguments, is allowed by the Koran every one knows, though few are acquainted with the limitations with which it is allowed. Many persons have fallen into the vulgar mistake that Mohammed granted to his followers an unbounded plurality, some pretending that a man may have as many wives, and others as many concubines, as he can maintain; whereas, according to the express words of the Koran, no man can have more than four, whether wives or concubines; and if a man apprehend any inconvenience from even that number of wives, it is added, as an advice, that he marry one only, or if he cannot be contented with one, that he may take up with his she-slaves, not exceeding, however, the limited number. And this is certainly the utmost Mohammed allowed his followers. Nor can we urge as an argument against so plain a precept the corrupt manners of his followers, many of whom, especially men of quality and fortune, indulge themselves in criminal excesses; nor yet the example of the prophet himself, who had peculiar privileges in this and other points. In making the above-mentioned limitation Mohammed was directed by the decision of the Jewish doctors, who, by way of counsel, limit the number of wives to four, though their law confines them not to any certain number.

Divorce is also well known to be allowed by the Mohammedan law, as it was by the Mosaic, but this difference only, that according to the latter a

man could not take again a woman whom he had divorced, and who had been married or betrothed to another, whereas Mohammed, to prevent his followers from divorcing their wives on every slight occasion, ordained that if a man divorced his wife the third time (for he might divorce her twice without being obliged to part with her, if he repented of what he had done), it should not be lawful for him to take her again until she had been first married to another and divorced by such second husband. And this precaution has had so good an effect that the Mohammedans are seldom known to proceed to the extremity of divorce, notwithstanding the liberty given them, it being considered a great disgrace so to do; and there are but few that will take a wife again on the condition enjoined. It must be observed that though a man is allowed by the Mohammedan law to repudiate his wife even on the slightest disgust, yet the women are not allowed to separate themselves from their husbands, unless it be for ill usage, want of proper maintenance, neglect of conjugal duty, impotency, or some cause of equal importance; but then she generally loses her dowry, which she does not if divorced by her husband, unless she has been guilty of immodesty or notorious disobedience.

When a woman is divorced, she is obliged by the direction of the Koran to wait three months before marrying another, after which time she is at full liberty to dispose of herself as she pleases, and during her whole time of waiting she may continue in her husband's house, and is to be maintained at his expense, it being forbidden to turn a woman out before the expiration of the term, unless she be guilty of dishonesty.

Fornication in single women, as well as married, was in the beginning of Mohammedanism very severely punished, those guilty of it being ordered to be shut up in prison till they died; but afterward it was ordained by the Sonna that an adulteress should be stoned and an unmarried woman guilty of fornication scourged with a hundred stripes and banished for a year. A she-slave, if convicted of adultery, is to suffer but half the punishment of a free woman, viz., fifty stripes and banishment for six months, but is not to be put to death. To convict a woman of adultery, so as to make it capital, four witnesses are expressly required, and those, as the commentators say, ought to be men; and if a man falsely accuse a woman of reputation of fornication, and is not able to support the charge by that number of witnesses, he is to receive fourscore stripes, and his testimony is to be held invalid for the future. Fornication in either sex is by the sentence of the Koran to be punished with an hundred stripes.

If a man accuse his wife of infidelity, and is not able to prove it by sufficient evidence, and will swear four times it is true, and the fifth time imprecate God's vengeance on him if it be false, she is to be looked on as convicted, unless she will take the like oaths and make the like imprecation in testimony of her innocence, which if she do, she is free from punishment, though the marriage ought to be dissolved.

In most of the last-mentioned particulars the decisions of the Koran agree with those of the Jews. By the law of Moses adultery, whether in a married woman or a virgin betrothed, was punished with death; and the man who debauched them was to suffer the same punishment. The penalty of simple fornication was scourging, the general punishment in cases where none is particularly appointed; and a betrothed bondmaid,

if convicted of adultery, underwent the same punishment, being exempted from death because she was not free. By the same law no person was to be put to death on the oath of one witness; and a man who slandered his wife was also to be chastised—that is, scourged—and fined one hundred shekels of silver. The method of trying a woman suspected of adultery where evidence was wanting, by forcing her to drink the bitter water of jealousy, though obsolete long before the time of Mohammed, yet by reason of the oath of cursing with which the woman was charged and to which she was obliged to say Amen, bears great resemblance to the expedient devised by that prophet on the like occasion.

The institutions of Mohammed relating to the taking of slaves to wife and the prohibiting of marriage within certain degrees have likewise no small affinity with the institutions of Moses, and the parallel might be carried farther in several other particulars.

As to the prohibited degrees, it may be observed that the pagan Arabs abstained from marrying their mothers, daughters and aunts both on the father's side and on the mother's, and held it to be scandalous to marry two sisters, or for a man to take his father's wife, which last was notwithstanding too frequently practiced and is expressly forbidden in the Koran.

Before we leave the subject of marriage it may be proper to take notice of peculiar privileges in relation to them which were granted by God to Mohammed, as he pretended, exclusive of all other Moslems. One of them was that he might lawfully marry as many wives and have as many concubines as he pleased, without being confined to any particular number; and this he pretended to have been the privilege of the prophets before him. Another was that he might alter the turns of his wives and cohabit with such of them as he thought fit, without being tied to that order and equality which others are obliged to observe. A third privilege was that no man might marry any of his wives, either such as he should divorce during his lifetime or such as he should leave widows at his death, which last particular exactly agrees with what the Jewish doctors have determined concerning the wives of their princes, it being judged by them to be indecent, and for that reason unlawful, for another to marry either the divorced wife or the widow of a king; and Mohammed it seems thought an equal respect at least due to the prophetic as to the regal dignity, and therefore ordered that his relicts should pass the remainder of their lives in perpetual widowhood.

The laws of the Koran concerning inheritances are also in several respects conformable to those of the Jews, though principally designed to abolish certain practices of the pagan Arabs, who used to treat widows and orphan children with great injustice, frequently denying them any share in the inheritance of their fathers or their husbands on pretence that the same ought to be distributed among those only who were able to bear arms, and disposing of the widows, even against their consent, as part of their husband's possessions. To prevent such injuries for the future, Mohammed ordered that women should be respected, and orphans have no wrong done them; and in particular that women should not be taken against their wills as by right of inheritance, but should themselves be entitled to a distributive part of what their parents, husbands and near relations should leave behind them in a certain proportion.

The general rule to be observed in the distribu-

tion of decedents' estates is that a male shall have twice as much as a female, but to this rule there are some exceptions, a man's parents, for example, and also his brothers and sisters, where they are entitled not to the whole but a small part of the inheritance, being entitled to equal shares with one another in the distribution thereof, without making any difference on account of sex. The particular proportions, in several cases, distinctly and sufficiently declare the intention of Mohammed, whose decisions expressed in the Koran seem to be pretty equitable, preferring a man's children first and then his nearest relations.

If a man dispose of any part of his estate by will, two witnesses at least are required to render it valid, and such witnesses ought to be of his own tribe and of the Mohammedan religion if such can be had. Though there is no express law to the contrary, yet the Mohammedan doctors consider it very wrong for a man to give away any part of his substance from his family unless it be in legacies for pious uses, and even in that case a man ought not to give all that he has in charity, but only a reasonable part, in proportion to his substance. On the other hand, though a man make no will and bequeath nothing for charitable uses, yet the heirs are directed, on the distribution of the estate, if the value will permit, to bestow something on the poor, especially such as are of kin to the deceased and to the orphans.

The first law, however, laid down by Mohammed touching inheritances was not very equitable, for he declared that those who had fled with him from Mecca and those who had received and assisted him at Medina should be deemed the nearest of kin, and consequently heirs to one another, to the exclusion of their relations by blood; indeed, though a man were a true believer, yet, if he had not fled from his country for the sake of religion and joined the prophet, he was to be looked on as a stranger; but this law was soon abrogated.

It must be observed that among the Mohammedans the children of their concubines or slaves are considered as equally legitimate with those of their legal wives, none being accounted bastards except such as are born of common women and whose fathers are unknown.

As to private contracts between man and man, the conscientious performance of them is frequently recommended in the Koran. To prevent disputes, all contracts are directed to be made before witnesses; and in case such contracts are not immediately executed, the same are to be reduced to writing in the presence of two witnesses at least, who must be Moslems and of the male sex; but if two men cannot be conveniently had, then one man and two women may suffice. The same course is also directed to be taken for the security of debts to be paid at a future day, and where a writer is not to be found pledges are to be taken. Hence, if people trust one another without writing, witnesses or pledge, the party on whom the demand is made is always acquitted if he denies the charge on oath and swears that he owes the plaintiff nothing, unless the contrary be proved by very convincing circumstances.

Willful murder, though forbidden by the Koran under the severest penalties to be inflicted in the next life, is yet allowed to be compounded on payment of a fine to the family of the deceased and freeing a Moslem from captivity; but it is at the option of the next of kin, or the revenger of blood, as he is called in the Pentateuch, either to accept such satisfaction or to refuse it, for he may, if he pleases, insist on having the murderer deliv-

ered into his hands, to put to death in such a manner as he shall think fit. In this particular Mohammed has gone against the express letter of the Mosaic law, which declares that no satisfaction shall be taken for the life of a murderer, and he seems, in so doing, to have had respect to the customs of the Arabs in his time, who, being of a vindictive temper, used to revenge murder in too unmerciful a manner, whole tribes frequently engaging in bloody wars on such occasions, the natural consequence of their independency and having no common judge or superior.

If the Mohammedan laws seem lenient in case of murder, they may perhaps be deemed too rigorous in case of manslaughter or the killing of a man undesignedly, which must be redeemed by fine (unless the next of kin shall think fit to remit it out of charity) and the freeing of a captive; but if a man be not able to do this, he is to fast two months by way of penance. The fine for a man's blood is set in the Sonna at a hundred camels, and is to be distributed among the relations of the deceased according to the laws of inheritances; but it must be observed that though the person slain be a Moslem, yet if he be of a nation or party at enmity or not in confederacy with those to whom the slayer belongs, he is not then bound to pay any fine at all, the redeeming of a captive being in such case declared a sufficient penalty. It is probable that Mohammed by these regulations laid so heavy a penalty on involuntary manslaughter not only to make people beware incurring the same, but also to humor in some degree the revengeful temper of his countrymen, which might be with difficulty, if at all, prevailed on to accept a lighter satisfaction. Among the Jews, who seem to have been no less addicted to revenge than their neighbors, the manslayer who had escaped to a city of refuge was obliged to keep himself within that city, and to abide there till the death of the person who was high priest at the time the act was committed, that his absence and time might cool the passion and mitigate the resentment of the friends of the deceased; but if he quitted his asylum before that time, the revenger of blood, if he found him, might kill him, nor could any satisfaction be made for the slayer to return home before the prescribed time.

Theft is ordered to be punished by cutting off the offending part, the hand, which at first sight seems just enough. But the law of Justinian forbidding a thief to be maimed is more reasonable, because, stealing being generally the effect of indigence, to cut off that limb would be to deprive him of the means of getting his livelihood in an honest manner. The Sonna forbids the infliction of this punishment unless the thing stolen be of a certain value.

As to injuries done to men in their persons, the law of retaliation, which was ordained by the law of Moses, is also approved by the Koran; but this law, which seems to have been allowed by Mohammed to his Arabians for the same reason as it was to the Jews, viz., to prevent particular revenges, to which both nations were extremely addicted, being neither strictly just nor practicable in many cases, is seldom put into execution, the punishment being generally commuted into a fine, which is paid to the party injured. Or rather Mohammed designed the words of the Koran relating thereto should be understood in the same manner as those of the Pentateuch most probably ought to be—that is, not of an actual retaliation according to the strict literal meaning, but of a retribution proportionable to the injury;

for a criminal did not have his eyes put out, nor was a man mutilated according to the law of Moses, the expression "eye for eye and tooth for tooth" being only a proverbial manner of speaking, the sense of which amounts to this—that every one shall be punished by the judges according to the heinousness of the crime.

In injuries and crimes of an inferior nature, where no particular punishment is provided by the Koran, and where a pecuniary compensation will not do, the Mohammedans, according to the practice of the Jews in similar cases, have recourse to stripes or drubbing, the most common chastisement used in the East at this day.

Notwithstanding the Koran is by the Mohammedans in general regarded as the fundamental part of their civil law, and the decisions of the Sonna among the Turks, and of the Imams among those of the Persian sect, with the interpretations of their several doctors, are usually followed in judicial decisions, yet the secular tribunals do not think themselves bound to observe the same in all cases, but frequently give judgment against those decisions which are not always consonant to equity and reason; and therefore distinction is to be made between the written civil law as administered in the ecclesiastical courts and the law of nature or common law, which takes place in the secular courts and has the executive power on its side.

Under the head of civil laws may be comprehended the injunction of warring against infidels, which is repeated in several passages of the Koran, and declared to be of high merit in the sight of God, those who are slain fighting in defence of the faith being regarded as martyrs, and promised immediate admission into paradise. Hence this duty is greatly magnified by the Mohammedan divines, who call the sword the key of heaven and hell, and persuade their people that the least drop of blood spilt in the way of God, as it is called, is most acceptable unto him, and that defending the territories of the Moslems for one night is more meritorious than a fast of two months; on the other hand, refusal to serve in these holy wars, or to contribute toward carrying them on, if a man is able, is accounted a most heinous crime. Such a doctrine, which Mohammed ventured not to teach till his circumstances enabled him to put it in practice, it must be admitted, was well calculated for his purpose; for what dangers and difficulties may not be despised and overcome by the courage and constancy which these sentiments necessarily inspire? Nor have the Jews and Christians, however they may detest such principles in others, been ignorant of the force of enthusiastic heroism, or omitted to stir up their respective partisans by similar arguments and promises. The Jews, indeed, had a divine commission, extensive and explicit enough, to attack, subdue and destroy the enemies of their religion; and Mohammed pretended to have received one in favor of himself and his Moslems, in terms equally plain and full, and therefore it is no wonder that they should act consistently with their avowed principles; but that Christians should teach and practice a doctrine so opposite to the temper and whole tenor of the gospel seems very strange; and yet the latter have carried matters farther, and shown a more violent spirit of intolerance, than either of the former.

Adverting briefly to the laws of war according to the Mohammedans, we shall notice some conformity between them and those of the Jews.

While Mohammedanism was in its infancy, its

enemies taken in battle were doomed to death without mercy; but this was deemed too severe to be put into practice when that religion came to be sufficiently established and past the danger of being subverted by its enemies. The same sentence was pronounced not only against the seven Canaanitish nations whose possessions were given to the Israelites, and without whose destruction they could not have settled themselves in the country assigned to them, but against the Amalekites and Midianites, who had done their utmost to cut them off in their passage thither. When the Mohammedans declare war against people of a different faith, they give them their choice of three offers, viz., either to embrace Mohammedanism, in which case they become not only secure in their persons, families and fortunes, but entitled to all the privileges of other Moslems; or to submit and pay tribute, by doing which they are allowed to profess their own religion, provided it be not gross idolatry, or against the moral law; or else to decide the quarrel by the sword, in which last case, if the Moslems prevail, the captive women and children become absolute slaves, and the men taken in the battle may either be slain, unless they turn Mohammedans, or otherwise disposed of, at the pleasure of the prince. Herewith agree the laws of war given to the Jews, which relate to the nations not devoted to destruction; and Joshua is said to have sent even to the inhabitants of Canaan, before he entered the land, three schedules, in one of which was written, Let him fly, who will; in the second, Let him surrender, who will; and in the third, Let him fight, who will; though none of those nations made peace with the Israelites (except the Gibeonites, who obtained terms of security by stratagem, after they had refused those offered by Joshua), it being of the Lord to harden their hearts, that he might destroy them utterly.

On the first considerable success of Mohammed in war, the dispute which happened among his followers in relation to dividing the spoil rendered it necessary for him to make some proper regulation; he therefore pretended to have received the divine commission to distribute the spoil among the soldiers at his own discretion, reserving, in the first place, one-fifth part for the uses after mentioned, and in consequence considered himself authorized on extraordinary occasions to distribute it as he thought fit, without observing an equality. Thus he did, for example, with the spoil of the tribe of Hawazen taken at the battle of Honein, which he bestowed by way of presents on the Meccans only, passing by those of Medina, and highly distinguishing the principal Korashites, that he might ingratiate himself with them after he had become master of their city. According to the Jews, the spoil was to be divided into two equal parts, one to be shared among the captors and the other to be taken by the prince, and by him employed for his own support and the use of the public. Moses, it is true, divided one-half of the plunder of the Midianites among those who went to battle and the other half among all the congregation; but this, they say, being a peculiar case and done by the express order of God himself, must not be looked on as a precedent. It should seem, however, from the words of Joshua to the two tribes and a half, when he sent them home into Gilead after the conquest and division of the land of Canaan, that they were to divide the spoil of their enemies with their brethren after their return; and the half which was in succeeding times taken by

the king was in all probability taken by him as head of the community and representing the whole body. It is remarkable that the dispute among Mohammed's men about sharing the booty at Bedr arose on the same occasion as did that among David's soldiers in relation to the spoils recovered from the Amalekites, those who had been in the action insisting that they who tarried by the stuff should have no part of the spoil, and that the same decision was given in both cases, which became a law for the future—to wit, that they should share alike.

The fifth part, directed by the Koran to be taken out of the spoil before it be divided among the captors, is declared to belong to God and to the apostle and his kindred and the orphans and the poor and the traveler, which words are variously understood. Al Shafei was of opinion that the whole ought to be divided into five parts, the first, which he called God's part, to go to the treasury, and be employed in building and repairing fortresses, bridges and other public works, and in paying salaries to magistrates, civil officers, professors of learning, ministers of public worship, etc.; the second part to be distributed among the kindred of Mohammed—that is, the descendants of his grandfather Hashem and of his great uncle al Motaleb, as well the rich as the poor, the children as the adult, the women as the men, observing only to give a female but half the share of a male; the third part to go to the orphans; the fourth part to the poor, who are not able to earn their livelihood; and the fifth part to travelers who are in want on the road, though they may be rich men in their own country. According to Malee Ebn Ans, the whole is at the disposition of the imam or prince, who may distribute the same at his own discretion, where he sees most need. Abu'l Aliya went according to the letter of the Koran, and declared his opinion to be that the whole should be divided into six parts, and that God's part should be applied to the service of the Caaba, while others suppose God's part and the apostle's to be one and the same. Abu Hanifa thought that the share of Mohammed and his kindred sank at that prophet's death, since which the whole ought to be divided among the orphans, the poor and the traveler. Some insist that the kindred of Mohammed entitled to a share of the spoils are the posterity of Hashem only, but those who think the descendants of his brother al Motaleb have also a right to a distributive part allege a tradition in their favor, purporting that Mohammed himself divided the share belonging to his relations among both families; and when Othman Ebn Assan and Jobeir Ebn Matam (who were descended from Abdshams and Nawfal, the other brothers of Hashem) told him that though they disputed not the preference of the Hashemites, they could not help taking it ill to see such difference made between the family of al Motaleb and themselves, who were related to him in an equal degree, and yet had no part in the distribution, the prophet replied that the descendants of al Motaleb had forsaken him neither in the time of ignorance nor since the revelation of Islam, and joined his fingers together in token of the strict union between them and the Hashemites. Some exclude none of the tribe of Koreish from receiving a part in the division of the spoil, and make no distinction between the poor and the rich, though, according to the more reasonable opinion, such of them as are poor only are intended by the text of the Koran, as is agreed in

the ease of the stranger; and others go so far as to assert that the whole fifth commanded to be reserved belongs to them only, and that the orphans and the poor and the traveler are to be understood of such as are of that tribe. It must be observed that immovable possessions, as lands, etc., taken in war, are subject to the same laws as the movable, excepting only that the fifth part of the former is not actually divided, but the income and profits thereof, or of the prices thereof, if sold, are applied to public and pious uses, and distributed once a year, and that the prince may either take the fifth part of the land itself or the fifth part of the income and produce of the whole, as he shall choose.

#### VII. Of the Months commanded by the Koran to be kept Sacred; and of the setting Apart of Friday for the especial Service of God.

It was a custom among the ancient Arabs to observe four months in the year as sacred, during which they held it unlawful to wage war, and took off the heads from their spears, ceasing from incursions and other hostilities. During those months, whoever was in fear of his enemy lived in full security, so that if a man met the murderer of his father or his brother he durst not offer him any violence.

This institution prevailed among most of the Arabian tribes, and was so religiously observed, that there are but few instances in history of its being transgressed, the wars which were carried on without regard to it being therefore termed impious. One of these instances was in the war between the tribes of Koreish and Kais Ailan, in which Mohammed himself served under his uncles, being then fourteen, or, as others say, twenty, years old.

The months which the Arabs held sacred were al Moharram, Rajeb, Dhu'lkaada and Dhu'lhajja; the first, the seventh, the eleventh and the twelfth in the year. Dhu'lhajja being the month in which they performed the pilgrimage to Mecca, not only that month, but also the preceding and the following, were for that reason kept inviolable, that every one might safely and without interruption pass and repass to and from the festival. Rajeb is said to have been more strictly observed than any of the other three, probably because in that month the pagan Arabs used to fast, Ramadan, which was afterward set apart by Mohammed for that purpose, being in the time of ignorance dedicated to drinking in excess. By reason of the profound peace and security enjoyed in this month, one part of the provisions brought by the caravans of purveyors annually sent out by the Koreish for the supply of Mecca was distributed among the people, the other part being for the same reason distributed at the pilgrimage.

The observance of the aforesaid months seemed so reasonable to Mohammed that it met with his approbation; and the same is accordingly confirmed and enforced by several passages of the Koran, which forbid war to be waged during those months against such as acknowledge them to be sacred, but grant, at the same time, full permission to attack those who make no such distinction in the sacred months as well as in the profane.

One practice, however, of the Arabs, in relation to these sacred months, Mohammed thought proper to reform, for some of them, weary of sitting quiet for three months together, and eager to make their accustomed incursions for plunder, were accustomed, whenever it suited their inclination or

convenience, to put off the observing of al Moharram to the following month, Safar, thereby avoiding the keeping of the former, which they suppose it lawful for them to profane, provided they sanctified another month in lieu of it, and gave public notice thereof at the preceding pilgrimage. This transferring the observation of a sacred month to a profane month is what is truly meant by the Arabic word al Nasi, and is absolutely condemned, and declared to be an impious innovation.

The setting apart of one day in the week for the more special attendance of God's worship, so strictly required by the Jewish and Christian religions, appeared to Mohammed to be so proper an institution that he could not but imitate the professors thereof in that particular; though, for the sake of distinction, he might think himself obliged to order his followers to observe a different day from either. Several reasons are given why the sixth day of the week was chosen for this purpose; but Mohammed seems to have preferred that day, chiefly because it was the day on which the people used to be assembled long before his time, though such assemblies were convened, perhaps, rather on a civil than a religious account. However it be, the Mohammedan writers bestow very extraordinary encomiums on this day, calling it the prince of days, and the most excellent day on which the sun rises, pretending also that it will be the day on which the last judgment will be solemnized; and they esteem it a peculiar honor to Islam that God has been pleased to appoint this day to be the feast-day of the Moslems, and granted them the advantage of having first observed it.

Though the Mohammedans do not think themselves bound to keep their day of public worship so holy as the Jews and Christians are certainly obliged to keep theirs, there being a permission, as is generally supposed, in the Koran allowing them to return to their employments or diversion after divine service is over; yet the most devout disapprove the employment of any part of that day in worldly affairs, and require it to be wholly dedicated to the business of the life to come.

Since we have mentioned the Mohammedan weekly feast, we beg leave just to take notice of their two Beirams or principal annual feasts. The first of them is called, in Arabic, Id al fetr—i. e., the feast of breaking the fast—and begins the first of Shawal, immediately succeeding the fast of Ramadan; and the other is called Id al korban, or Id al adha—i. e., the feast of the sacrifice—and begins on the tenth of Dhu'lhajja, when the victims are slain at the pilgrimage of Mecca. The former of these feasts is properly the lesser Beiram, and the latter the greater Beiram; but most authors who have written of Mohammedan affairs exchange the epithets, and call that which follows Ramadan the greater Beiram, because it is observed in an extraordinary manner and kept for three days at Constantinople and in other parts of Turkey, and in Persia for five or six days, by the common people at least, with great demonstrations of public joy, to make themselves amends, as it were, for the mortification of the preceding month; whereas the feast of sacrifices, though it be also kept for three days, and the first of them be the most solemn day of the pilgrimage, the principal act of devotion among the Mohammedans, is much less noticed by the generality of people, because the ceremonies with which the same is observed are performed at Mecca, the only scene of that solemnity.

#### VIII. Of the Principal Sects among the Mohammedans; and of those who have pretended to Prophecy among the Arabs, in or since the Time of Mohammed.

Before we take a view of the sects of the Mohammedans it will be necessary to say something of the two sciences by which all disputed questions among them are determined—viz., their scholastic and practical divinity.

Their scholastic divinity is a mongrel science, consisting of logical, metaphysical, theological and philosophical disquisitions, and built on principles and methods of reasoning very different from what are used by those who pass among the Mohammedans themselves for the sounder divines or more able philosophers, and therefore in the partition of the sciences this is generally left out, as unworthy a place among them. The learned Maimonides has labored to expose the principles and systems of the scholastic divines, as frequently repugnant to the nature of the world and the order of the creation, and intolerably absurd.

This art of handling religious disputes was not known in the infancy of Mohammedanism, but was introduced when sects sprang up and articles of religion began to be called in question, and was at first made use of to defend the truth of those articles against innovators, and while it keeps within these bounds is admitted to be a commendable study, being necessary for the defence of the faith; but when it proceeds farther, from a desire for disputation, it is deemed worthy of censure.

This is the opinion of al Ghazali, who observes a medium between those who have too high a value for this science and those who absolutely reject it. Among the latter was al Shafei, who declared that, in his judgment, if any man employed his time that way he deserved to be fixed to a stake and carried about through all the Arab tribes with the following proclamation to be made before him: This is the reward of him who, leaving the Koran and the Sonna, applied himself to the study of scholastic divinity. Al Ghazali, on the other hand, thinks that as it was introduced by the invasion of heresies, it is necessary to be retained in order to quell them; but in the person who studies this science he requires three things, diligence, acuteness of judgment and probity of manners, and is by no means for suffering the same to be publicly explained. This science, therefore, among the Mohammedans, is the art of controversy by which they discuss points of faith concerning the essence and attributes of God and the conditions of all possible things, either in respect to their creation or final restoration, according to the rules of the religion of Islam.

The other science is practical divinity or jurisprudence, and is the knowledge of the decisions of the law which regard practice, gathered from distinct proofs.

Al Ghazali declares that he had the same opinion of this science as of the former, its origin being owing to the corruption of religion and morality; and therefore deemed both sciences to be necessary, not in themselves, but by accident only, to curb the irregular imaginations and passions of mankind, as guards become necessary in the highways by reason of robbers, the end of the first being the suppression of heresies, and of the other the decision of legal controversies, for the quiet and peaceable living of mankind in this world, and for the preserving of the rule by which the magistrate may prevent one man from

injuring another, by declaring what is lawful and what is unlawful, by determining the satisfaction to be given or punishment to be inflicted, and by regulating other outward actions; and not only so, but to decide regarding religion itself and its conditions, so far as relates to the profession made by the mouth, it not being the business of the civilian to inquire into the heart. The depravity of men's manners, however, has made this knowledge of the laws so very requisite that it is usually called the science by way of excellence; nor is any man esteemed learned who has not applied himself to it.

The points of faith, subject to the examination and discussion of the scholastic divines, are reduced to four general heads, which they call the four bases, or great fundamental articles.

The first basis relates to the attributes of God, and his unity consistent therewith. Under this head are comprehended the questions concerning the eternal attributes which are asserted by some, and denied by others, and also the explication of the essential attributes and attributes of action; what is proper for God to do, and what may be affirmed of him, and what it is impossible for him to do. These things are controverted between the Asharians, the Keramians, the Mojassemians or Corporealists and the Motazalites.

The second basis regards predestination and the justice thereof, which comprises the questions concerning God's purpose and decree, man's compulsion or necessity to act, and his co-operation in producing actions, by which he may gain to himself good or evil; and also those which concern God's willing good and evil, and what things are subject to his power, and what to his knowledge, some maintaining the affirmative and others the negative. These points are disputed among the Kadarians, the Najarians, the Jabarians, the Asharians and the Keramians.

The third basis concerns the promises and threats, the precise acceptance of names used in divinity and the divine decisions, and comprehends questions relating to faith, repentance, promises, threats, forbearance, infidelity and error. The controversies under this head are maintained between the Morgians, the Waidians, the Motazalites, the Asharians and the Keramians.

The fourth basis regards history and reason—that is, the just weight they ought to have in matters belonging to faith and religion—and also the mission of prophets, and the office of imam, or chief pontiff. Under this head are comprised all casuistical questions relating to the moral beauty or turpitude of actions; inquiring whether things are allowed or forbidden by reason of their own nature, or by the positive law; and also questions concerning the preference of actions, the favor or grace of God, the innocence which ought to attend the prophetic office, and the conditions requisite in the office of imam, some asserting that it depends on right of succession, others on the consent of the faithful, and also the method of transferring it, with the former, and of confirming it, with the latter. These matters are the subjects of disputes between the Shiites, the Motazalites, the Keramians and the Asharians.

The different sects of Mohammedans may be distinguished into two sorts, those generally esteemed orthodox and those which are esteemed heretical.

The former, by a general name, are called Sunnites or Traditionists, because they acknowledge the authority of the Sonna, or collection of moral traditions of the sayings and actions of their prophet, which is a sort of supplement to the Koran, direct-

ing the observance of several things omitted in that book, and in name as well as design, answering to the Mishna of the Jews.

The Sunnites are subdivided into four chief sects, which, notwithstanding some differences as to legal conclusions in their interpretation of the Koran and matters of practice, are generally acknowledged to be orthodox in radicals or matters of faith, and capable of salvation, and have each of them their several stations or oratories in the temple of Mecca.

The founders of these sects are looked upon as the great masters of jurisprudence, and are said to have been men of great devotion and self-denial, well versed in the knowledge of those things which belong to the next life and to man's right conduct here, and directing all their knowledge to the glory of God. This is al Ghazali's encomium of them, who thinks it derogatory to their honor that their names should be used by those who, neglecting to imitate the other virtues which make up their character, apply themselves only to attain their skill, and follow their opinions in matters of legal practice.

The first of the four orthodox sects is that of the Hanefites, so named from their founder, Abu Hanifa al Noman Ebn Thabet, who was born at Cufa, in the eightieth year of the Hejra, and died in the one hundred and fiftieth. He ended his life in prison at Baghdad, where he had been confined because he refused to be made kadi or judge, on which account he was very severely dealt with by his superiors, yet could not be prevailed on, either by threats or ill treatment, to undertake the charge, choosing rather to be punished by them than by God, says al Ghazali; who adds that when he excused himself from accepting the office by alleging that he was unfit for it, being asked the reason, he replied, "If I speak the truth, I am unfit; but if I tell a lie, a liar is not fit to be a judge." It is said that he read over the Koran in the prison where he died no less than seven thousand times.

The Hanefites are called by an Arabian writer the followers of reason, and those of the three other sects followers of tradition, the former being principally guided by their own judgment in their decisions, and the latter adhering more tenaciously to the traditions of Mohammed.

The sect of Abu Hanifa heretofore prevailed chiefly in Irak, but now generally prevails among the Turks and Tartars; his doctrine was brought into great credit by Abu Yusuf, chief justice under the khalifs al Hadi and Haroun al Raschid.

The second orthodox sect is that of Malec Ebn Ans, who was born at Medina in the year of the Hejra ninety, ninety-three, ninety-four or ninety-five, and died there in one hundred and seventy-seven, one hundred and seventy-eight or one hundred and seventy-nine (for so much do authors differ). This doctor is said to have paid great regard to the traditions of Mohammed. In his last illness a friend going to visit him found him in tears; and asking him the reason of it, he answered, "How should I not weep? and who has more reason to weep than I? Would to God that for every question decided by me according to my own opinion I had received so many stripes! then would my accounts be easier. Would to God I had never given any decision of my own!" Al Ghazali thinks it a sufficient proof of Malec's directing his knowledge to the glory of God that, being once asked his opinion as to forty-eight questions, his answer to thirty-two of them was that he did not know, it being no easy matter for

one who has any other view than God's glory to make so frank a confession of his ignorance.

The doctrine of Malec is chiefly followed in Barbary and other parts of Africa.

The author of the third orthodox sect was Mohammed Ebn Edris al Shafei, born either at Gaza or Asealon, in Palestine, in the year of the Hejra one hundred and fifty, the same day, as some say, that Abu Hanifa died, and was carried to Mecca at two years of age and there educated. He died in two hundred and four, in Egypt, whither he went about five years before. This doctor is celebrated for his excellency in all branches of learning, and was much esteemed by Ebn Hanbal, his contemporary, who used to say that "he was as the sun to the world, and as health to the body."

Al Shafei is said to have been the first who discoursed of jurisprudence and reduced that science into a method, one wittily saying that the relations of the traditions of Mohammed were asleep till al Shafei came and waked them. He was a great enemy to the scholastic divines, as has been already observed. Al Ghazali tells us that al Shafei used to divide the night into three parts, one for study, another for prayer, and the third for sleep. It is also related of him that he never so much as once swore by God, either to confirm a truth or to affirm a falsehood, and that being once asked his opinion he remained silent for some time; and when the reason of his silence was demanded, he answered, "I am considering first whether it be better to speak or to hold my tongue." The followers of this doctor are from him called Shafeites, and were formerly spread into Mawara'nahr and other parts eastward, but are now chiefly of Arabia and Persia.

Ahmed Ebn Hanbal, the founder of the fourth sect, was born in the year of the Hejra one hundred and sixty-four; but as to the place of his birth there are two traditions: some say he was born at Meru, in Khorasan, of which city his parents were, and that his mother brought him thence to Baghdad at her breast, while others assure us that he was born at Baghdad. Ebn Hanbal in process of time attained a great reputation on account of his virtue and knowledge, being so well versed in the traditions of Mohammed, in particular, that it is said he could repeat no less than a million of them. He was very intimate with al Shafei, from whom he received most of his traditional knowledge, being his constant attendant till his departure for Egypt. Refusing to acknowledge the Koran to be created, he was, by order of the khalif al Motasem, severely scourged and imprisoned. Ebn Hanbal died at Baghdad, in the year two hundred and forty-one, and was followed to his grave by eight hundred thousand men and sixty thousand women. It is related as something very extraordinary, if not miraculous, that on the day of his death no less than twenty thousand Christians, Jews and Magians embraced the Mohammedan faith. This sect increased so fast, and became so powerful and bold, that in the year three hundred and twenty-three, in the khalifat of al Radi, they raised a great commotion in Baghdad, entering people's houses and spilling their wine, if they found any, and beating the singing women they met with, and breaking their instruments; and a severe edict was published against them before they could be subdued, but the Hanbalites at present are not very numerous, few of them being met with out of the limits of Arabia.

The heretical sects among the Mohammedans are those which hold heterodox opinions in fundamentals or matters of faith.

The first controversies relating to fundamentals began when most of the companions of Mohammed were dead; for in their days there was no dispute, unless about things of small moment, if we except the dissensions concerning the imams, or rightful successors of their prophet, which were fomented by interest and ambition, the Arabs' continual employment in the wars during that time allowing them little or no leisure to enter into nice inquiries and subtle distinctions, but no sooner was the ardor of conquest abated than they began to examine the Koran more closely, whereupon differences in opinion became unavoidable, and at length so greatly multiplied that the number of their sects, according to the common opinion, is seventy-three. For the Mohammedans seem ambitious that their religion should exceed others even in this respect, saying that the Magians are divided into seventy sects, the Jews into seventy-one, the Christians into seventy-two, and the Moslems into seventy-three, as Mohammed had foretold, of which sects they reckon one to be always orthodox and entitled to salvation.

The first heresy was that of the Kharejites, who revolted from Ali in the thirty-seventh year of the Hejra; and not long after, Mabad al Johni, Ghailan of Damascus and Jonas al Aswari broached heterodox opinions concerning predestination, and the ascribing of good and evil unto God, whose opinions were followed by Wasel Ebn Ata. This latter was the scholar of Hasan of Basra, in whose school a question being proposed, whether he who had committed a grievous sin was to be deemed an infidel or not, the Kharejites maintaining the affirmative, and the orthodox the negative, Wasel, without waiting his master's decision, withdrew abruptly and began to publish among his fellow-scholars a new opinion of his own—to wit, that such a sinner was in a middle state; and he was thereupon expelled from the school, he and his followers being thenceforth called Motazalites or Separatists.

The several sects which have arisen since this time are variously compounded and decompounded of the opinions of four chief sects—the Motazalites, the Sefatians, the Kharejites and the Shiites.

1. The Motazalites were the followers of the before-mentioned Wasel Ebn Ata. As to their chief and general tenets, 1. They entirely rejected all eternal attributes of God to avoid the distinction of persons made by the Christians, saying that eternity is the proper attribute of his essence; that God knows by his essence, and not by his knowledge; and the same they affirmed of his other attributes, and hence this sect were also named Moattolites from their divesting God of his attributes; and they went so far as to say that to affirm these attributes is the same thing as to make more eternals than one, and that the unity of God is inconsistent with such an opinion, and this was the true doctrine of Wasel, their master, who declared that whoever asserted an eternal attribute asserted there were two gods. The point of speculation concerning the divine attributes was not ripe at first, but was at length brought to maturity by Wasel's followers after they had read the books of the philosophers. 2. They believed the word of God to have been created in subjecto (as the schoolmen term it), and to consist of letters and sound, copies thereof being written in books to express or imitate the original. They also went farther and affirmed that whatever was created in subjecto is also an accident and liable to perish. They denied absolute predestination, holding that God was not the author of evil, but of good only, and that

man was a free agent, which being properly the opinion of the Kadarians, we defer what may be farther said thereof till we come to speak of that sect. On account of this tenet and the first, the Motazalites look on themselves as the defenders of the unity and justice of God. 4. They held that if a professor of the true religion be guilty of a grievous sin and die without repentance, he will be eternally damned, though his punishment will be lighter than that of the infidels. 5. They denied all vision of God in paradise by the corporeal eye, and rejected all comparisons or similitudes applied to God.

This sect are said to have been the first inventors of scholastic divinity, and are subdivided into several inferior sects, amounting, as some reckon, to twenty, which mutually brand one another with infidelity. The most remarkable of them are—

1. The Hodeilites, or followers of Hamdan Abu Hodeil, a Motazalite doctor, who differed something from the common form of expression used by this sect, saying that God knew by his knowledge, but that his knowledge was his essence; and so of the other attributes; which opinion he took from the philosophers, who affirm the essence of God to be simple and without multiplicity, and that his attributes are not posterior or accessory to his essence or subsisting therein, but are his essence itself; and this the more orthodox regard as kindred to making distinctions in the Deity, which is the thing they so much abhor in the Christians. As to the Koran's being uncreated, he made some distinction, holding the word of God to be partly not in subjecto (and therefore uncreated), as when he spake the word *kun—i. e., fiat*—at the creation, and partly in subjecto, as the precepts, prohibitions, etc.

2. The Jobbaian, or followers of Abu Ali Mohammed Ebn Abd al Wahhab, surnamed al Jobbai, whose meaning when he had made use of the common expression of the Motazalites, that God knows by his essence, was that God's being knowing is not an attribute, the same with knowledge, nor such a state as rendered his being knowing necessary. He held God's word to be created in subjecto, as in the preserved table, for example, the memory of Gabriel, Mohammed, etc. This sect denied that God could be seen in paradise without the assistance of corporeal eyes, and held that man produced his acts by a power super-added to health of body and soundness of limb; that he who was guilty of a mortal sin was neither a believer nor an infidel, but a transgressor, and if he died in his sins would be doomed to hell for eternity, and that God conceals nothing of whatever he knows from his servants.

3. The Hashemians, who were so named from their master Abu Hashem al Salam, the son of Abu Ali al Jobbai, and whose tenets nearly agreed with those of the preceding sect. Abu Hashem took the Motazalite form of expression, that God knows by his essence, in a different sense from others, supposing it to mean that God has or is endued with a disposition which is a known property or quality, posterior or accessory to his existence. His followers were so much afraid of making God the author of evil that they would not allow him to be said to create an infidel, because, according to their way of arguing, an infidel is a compound of infidelity and man, and God is not the creator of infidelity. Abu Hashem and his father, Abu Ali al Jobbai, were both celebrated for their skill in scholastic divinity.

4. The Nodhamians, or followers of Ibrahim al Nodham, who, having read books of philosophy,

set up a new sect, and imagining he could not sufficiently remove God from being the author of evil without divesting him of his power in respect thereto, taught that no power ought to be ascribed to God concerning evil and rebellious actions; but this he affirmed against the opinion of his own disciples, who admitted that God could do evil, but did not, because of its turpitude.

5. The Hayetians, so named from Ahmed Ebn Hayet, who had been of the sect of the Nodhamians, but broached some new notions on reading the philosophers. His peculiar opinions were—1. That Christ was the eternal word incarnate, and took a true and real body, and will judge all creatures in the life to come; he also further asserted that there are two gods or creators, the one eternal, viz., the most high God, and the other not eternal, viz., Christ, which opinion is not very different from that of the Arians and Socinians. 2. That there is a successive transmigration of the soul from one body into another, and that the last body will enjoy the reward or suffer the punishment due to each soul; and 3. That God will be seen at the resurrection, not with the bodily eyes, but with those of the understanding.

6. The Jahedhians, or followers of Amru Ebn Bahr, surnamed al Jahedh, a great doctor of the Motazalites, and very much admired for the elegance of his compositions, who differed from his brethren in that he imagined the damned would not be eternally tormented in hell, but should be changed into the nature of fire, and that the fire would of itself attract them, without any necessity of their going into it. He also taught that if a man believed God to be his Lord, and Mohammed the apostle of God, he became one of the faithful, and was obliged to do nothing further.

7. The Mozdarians, who embraced the opinions of Isa Ebn Sobeih al Mozdar, and those very absurd ones; for besides his notions relating to the Koran, he went so directly counter to the opinion of those who abridged God of the power to do evil that he affirmed it possible for God to be a liar and unjust. He also pronounced him to be an infidel who thrust himself into the supreme government; nay, he went so far as to assert men to be infidels while they said there is no God but God, and even condemned all the rest of mankind as guilty of infidelity.

8. The Basharians, who maintained the tenets of Bashar Ebn Motamer, the master of al Mozdar, and a principal man among the Motazalites. He differed in some things from the general opinion of that sect, carrying man's free agency to great excess, making it even independent; and yet he thought God might doom an infant to eternal punishment, but granted he would be unjust in so doing. He taught that God is not always obliged to do that which is best; for if he pleased, he could make all men true believers. These sectaries also held that if a man repent of a moral sin, and afterward return to it, he will be liable to suffer the punishment due to the former transgression.

9. The Thamamians, who followed Thamama Ebn Bashar, a chief Motazalite. Their peculiar opinions were: 1. That sinners should remain in hell for ever. 2. That free actions have no producing author. 3. That at the resurrection all infidels, idolaters, atheists, Jews, Christians, Magians and heretics shall be reduced to dust.

10. The Kadarians, which is really a more ancient name than that of Motazalites, Mabad al Johni and his adherents being so called, who disputed the doctrine of predestination before Wasel

quitted his master; for which reason some use the denomination of Kadarians as more extensive than the other, and comprehend all the Motazalites under it. This sect deny absolute predestination, saying that evil and injustice ought not to be attributed to God, but to man, who is a free agent, and may therefore be rewarded or punished for his actions, which God has granted him power either to do or to let alone. But what the opinion of the Kadarians in Mohammed's time was is very uncertain; the Motazalites say the name belongs to those who assert predestination, and make God the author of good and evil, viz., the Jabarians; but all the other Mohammedan sects agree to fix it on the Motazalites, who they say are like the Magians in establishing two principles, light or God, the author of good, and darkness or the devil, the author of evil; but this cannot absolutely be said of the Motazalites, for they ascribe men's good deeds to God, but their evil deeds to themselves, meaning thereby that man has free liberty and power to do either good or evil, and is master of his actions; and for this reason it is said that the other Mohammedans call them Magians, because they assert another author of actions besides God. And, indeed, it is difficult to say what Mohammed's own opinion was in the matter; for on the one side the Koran itself is pretty plain for absolute predestination, and many sayings of Mohammed are recorded to that purpose. On the other side, it is urged, in the behalf of the Motazalites, that Mohammed declaring that the Kadarians and Magians had been cursed by the tongues of seventy prophets, and being asked who the Kadarians were, answered, those who assert that God predestinated them to be guilty of rebellion, and yet punishes them for it; al Hasan is also said to have declared that God sent Mohammed to the Arabs while they were Kadarians or Jabarians, and laid their sins upon God, and to confirm the matter this sentence of the Koran is quoted: When they commit a filthy action, they say, We found our fathers practicing the same, and God hath commanded us so to do: Say, verily, God commandeth not filthy actions.

II. The Sefatians held the opposite opinion to the Motazalites in respect to the eternal attributes of God, which they affirmed, making no distinction between the essential attributes and those of operation; and hence they were named Sefatians or Attributists. Their doctrine was that of the first Mohammedans, who were not yet acquainted with these nice distinctions; but this sect afterward introduced another species of declarative attributes, or such as were necessarily used in historical narration, as hands, face, eyes, etc., which they did not offer to explain, but contented themselves with saying they were in the law, and that they called them declarative attributes. However, at length, by giving various interpretations of these attributes, they divided into many different opinions; some, by taking the words in the literal sense, fell into the notion of a likeness or similitude between God and created beings; to which it is said the Karaites among the Jews, who favor the literal interpretation of Moses' law, had shown them the way; others explained them in another manner, saying that no creature was like God, but that they neither understood, nor thought it necessary to explain, the precise signification of the words which seem to affirm the same of both, it being sufficient to believe that God hath no companion or similitude.

The sects of the Sefatians are—

1. The Asharians, the followers of Abu'l Hasan

al Ashari, who was first a Motazalite and the scholar of Abu Ali al Jobbai, but disagreeing with his master in opinion as to God's being bound, as the Motazalites assert, to do always that which is most expedient, left him and set up a new sect.

The opinions of the Asharians were—1. That they admitted the attributes of God to be distinct from his essence, yet so as to forbid any comparison to be made between God and his creatures. 2. As to predestination, they held that God had one eternal will, which is applied to whatsoever he willeth, both of his own actions and those of men, so far as they are created by him, but not as they are acquired or gained by them; that he willeth both their good and their evil, their profit and their hurt, and as he willeth and knoweth, he willeth concerning men that which he knoweth, and hath commanded the pen to write the same in the preserved table; and this is his decree and eternal immutable counsel and purpose. They also went so far as to say that it may be agreeable to the way of God that man should be commanded what he is not able to perform. But while they allow man some power, they seem to restrain it to such a power as cannot produce anything new. Only God, say they, so orders his providence that he creates, after or under and together with every created or new power, an action which is ready whenever a man wills it and sets about it; and this action is called *Casb*—i. e., acquisition—being, in respect to its creation, from God, but in respect to its being produced, employed and acquired, from man. 3. As to mortal sin, the Asharians taught that if a believer guilty of such sin die without repentance, his sentence is to be left to God, whether he pardon him out of mercy or whether the prophet intercede for him, or whether he punish him in proportion to his demerit, and afterward, through his mercy, admit him into paradise; but that it is not to be supposed he will remain for ever in hell with the infidels, seeing that it is declared that whoever shall have faith in his heart but of the weight of an ant shall be delivered from hell-fire. This is generally received as the orthodox doctrine in this point, and is diametrically opposite to that of the Motazalites.

These were the more rational Sefatians; but the ignorant part of them, not knowing how otherwise to explain the expressions of the Koran relating to the declarative attributes, fell into most gross and absurd opinions, making God corporeal and like created beings. Such were—

2. The Moshabbehites, or assimilators, who admitted a resemblance between God and his creatures, supposing him to be a figure composed of members or parts, either spiritual or corporeal, and capable of local motion, of ascent and descent, etc. Some of this sect inclined to the opinion of the Holulians, who believed that the divine nature might be united with the human in the same person; for they granted it possible that God might appear in a human form, as Gabriel did; and to confirm their opinion they allege Mohammed's words, that he saw his Lord in a most beautiful form, and Moses talking with God face to face. And,

3. The Keramians, or followers of Mohammed Ebn Keram, called also Mojassemians, or Corporealists, who not only admitted a resemblance between God and created beings, but declared God to be corporeal. The more sober among them, indeed, when they applied the word body to God, are understood to mean that he is a self-subsisting being, which with them is the definition of body;

but yet some of them affirmed him to be finite and circumscribed either on all sides or on some only (as beneath, for example), according to different opinions; and others admitted that he might be felt by the hand and seen by the eye. Indeed, one David al Jawari went so far as to say that his deity was a body composed of flesh and blood, and that he had members, as hands, feet, a head, a tongue, eyes and ears, but that he was a body, however, not like other bodies, neither was he like any created being. He is also said farther to have affirmed that from the crown of the head to the breast he was hollow, and from the breast downward solid, and that he had black curled hair. These blasphemous and monstrous notions were the consequence of the literal acceptance of those passages in the Koran which figuratively attribute corporeal actions to God, and of the words of Mohammed, when he said that God created man in his own image, and that he himself had felt the fingers of God, which he laid on his back, to be cold; besides which, this sect are charged with fathering on their prophet a great number of spurious and forged traditions to support their opinion, the greater part of which they borrowed from the Jews, who are accused of being naturally prone to assimilate God to men, so that they describe him as weeping for Noah's flood till his eyes were sore.

4. The Jabarians, who are the direct opponents of the Kadarians, denying free agency in man and ascribing his actions wholly unto God. They take their denomination from al Jabr, which signifies necessity or compulsion; because they hold man to be necessarily and inevitably constrained to act as he does by force of God's eternal and immutable decree. This sect is distinguished into several species, some being more extreme in their opinion, and are thence called pure Jabarians, and others more moderate, and are therefore called middle Jabarians. The former will not admit that men either act or have any power at all, either operative or acquiring, asserting that man can do nothing, but produces all his actions by necessity, having neither power, nor will, nor choice, any more than an inanimate agent. They also declare that rewarding and punishing are also the effects of necessity; and the same they say of the imposing of commands. This was the doctrine of the Jahmians, the followers of Jahm Ebn Safwan, who likewise held that paradise and hell will be annihilated after those who are destined thereto respectively shall have entered them, so that at last there will remain no existing being besides God, supposing those words of the Koran which declare that the inhabitants of paradise and of hell shall remain therein for ever to be hyperbolic only and intended for corroboration, and not to denote an eternal duration in reality. The moderate Jabarians are they who ascribe some power to man, but such a power as has no influence on the action; for as to those who grant the power of man to have a certain influence on the action, which influence is called Acquisition, some will not admit them to be called Jabarians, though others consider those also to be middle Jabarians, and to contend for the middle opinion between absolute necessity and absolute liberty, who attribute to man acquisition or concurrence in producing the action whereby he obtains commendation or blame (yet without admitting it to have any influence on the action), and therefore make the Asharians a branch of this sect. Having again mentioned the term acquisition, we may perhaps have a clearer idea of what the Moham-

medans mean by it, when told that it is defined to be an action directed to the obtaining of profit or the removing of harm, and for that reason never applied to any action of God, who acquireth to himself neither profit nor harm. The Jabarians also say that God is absolute Lord of his creatures, and may deal with them according to his own pleasure, without rendering account to any, and that if he should admit all men without distinction into paradise it would be no impartiality, or if he should cast them all into hell it would be no injustice. And in this particular, likewise, they agree with the Asharians, who assert the same, and say that reward is a favor from God, and punishment an act of justice, obedience being considered as a sign only of future reward, and transgression as a sign of future punishment.

5. The Morgians, who are said to be derived from the Jabarians. These teach that the judgment of every true believer who has been guilty of a grievous sin will be deferred till the resurrection; for which reason they pass no sentence on him in this world, either of absolution or condemnation. They also hold that disobedience with faith hurteth not, and that, on the other hand, obedience with infidelity profiteth not. This sect is divided into four species, three of which, according as they happen to agree in particular dogmas with the Kharejites, the Kadarians or the Jabarians, are distinguished as Morgians of those sects, and the fourth is that of the pure Morgians, which last species is again subdivided into five others. The opinions of Mokatel and Bashar, both of a sect of the Morgians called Thanbanians, should not be omitted. The former asserts that disobedience hurts not him who professes the unity of God and is endued with faith, and that no true believer shall be cast into hell. He also taught that God will surely forgive all crimes besides infidelity, and that a disobedient believer will be punished at the day of resurrection on the bridge laid over the midst of hell, where the flames of hell-fire shall seize him and torment him in proportion to his disobedience, and that he shall then be admitted into paradise. The latter held that if God casts the believers guilty of grievous sins into hell, yet they will be delivered thence after they shall have been sufficiently punished; but that it is neither possible nor consistent with justice that they should remain there for ever.

III. The Kharejites are they who depart or revolt from the lawful prince established by public consent; and thence comes their name, which signifies revolvers or rebels. The first who were so called were twelve thousand men who revolted from Ali after they had fought under him at the battle of Seffin, taking offence at his submitting the decision of his right to the khalifat, which Moawiyah disputed with him to arbitration, though they themselves had first urged him to it. These were also called Mohakkemites or Judiciarians, because the reason which they gave for their revolt was that Ali had referred a matter concerning the religion of God to the judgment of men, whereas the judgment in such case belonged only unto God. The heresy of the Kharejites consisted chiefly in two things. 1. They affirmed that a man might be promoted to the dignity of imam or prince, though he was not of the tribe of Koreish, nor even a freeman, provided he was a just and pious person and endued with the other requisite qualifications, and also held that if the imam turned aside from the truth he might be put to death or deposed, and that there was no absolute necessity for any imam at all in the

world. 2. They charged Ali with sin for having left an affair to the judgment of men which ought to have been determined by God alone, and went so far as to declare him guilty of infidelity, and to curse him on that account. In the thirty-eighth year of the Hejra, which was the year following the revolt, all those Kharejites who persisted in their rebellion, to the number of four thousand, were cut to pieces by Ali. The principal sects of the Kharejites, besides the Mohakkemites, above mentioned, are six, which, though they greatly differ among themselves in other matters, yet agree in these, viz., that they absolutely reject Othman and Ali, preferring the doing of this to the greatest obedience, and allowing marriages to be contracted on no other terms; they account those who are guilty of grievous sins to be infidels, and that they hold it necessary to resist the imam when he transgresses the law. One sect of them deserves more particular notice, viz.,

The Waidians, so called from al Waid, which signifies the threats denounced by God against the wicked. These are the antagonists of the Morgians, and assert that he who is guilty of a grievous sin ought to be declared an infidel or apostate, and will be eternally punished in hell, though he were a true believer, which opinion, as has been observed, occasioned the first rise of the Motazalites.

IV. The Shiites are the opponents of the Kharejites; their name properly signifies sectaries or adherents in general, but is peculiarly used to denote those of Ali Ebn Abi Taleb, who maintain him to be lawful khalif and imam, and that the supreme authority, both in spirituals and temporals, of right belongs to his descendants, notwithstanding they may be deprived of it by the injustice of others or their own fear. They also teach that the office of imam is not a common thing, depending on the will of the vulgar, so that they may set up whom they please; but a fundamental affair of religion, and an article which the prophet could not have neglected or left to the fancy of the common people. Indeed, some, thence called Imamians, go so far as to assert that religion consists solely in the knowledge of the true imam. The principal sects of the Shiites are five, which are subdivided into an almost innumerable number, so that some understand Mohammed's prophecy of the seventy odd sects of the Shiites only. Their general opinions are—1. That the peculiar designation of the imam and the testimonies of the Koran and Mohammed concerning him are necessary points. 2. That the imams ought necessarily to keep themselves from light sins as well as more grievous. 3. That every one ought publicly to declare who it is that he adheres to, and from whom he separates himself by word, deed or engagement, and that herein there should be no dissimulation.

Many of the Shiites carried their veneration for Ali and his descendants so far that they transgressed all bounds of reason and decency, though some of them were less extravagant than others. The Gholaites, who had their name from their excessive zeal for their imams, were so highly transported therewith that they raised them above the rank of created beings and attributed divine properties to them, transgressing on either hand by deifying mortal men and by making God corporeal. The sects of these are various and have various appellations in different countries. Abd'allah Ebn Saba (who had been a Jew, and had asserted the same thing of Joshua, the son of Nun) was the ringleader of one of them. This man gave the following salutation to Ali, viz., Thou art thou—i. e.,

Thou art God; and hereupon the Gholaites became divided into several species, some maintaining the same thing, or something like it, of Ali, and others of some one of his descendants, affirming that he was not dead, but would return again in the clouds and fill the earth with justice. But however much they disagreed in other things, they unanimously held a metempsychosis, and what they call al Holul, or the descent of God on his creatures, meaning thereby that God is present in every place and speaks with every tongue and appears in some individual persons; and hence some of them asserted their imams to be prophets, and at length gods. The Nosairins and the Ishakians taught that spiritual substances appear in grosser bodies, and that the angels and the devil have appeared in this manner. They also assert that God has appeared in the form of certain men; and since, after Mohammed, there has been no man more excellent than Ali, and after him, his sons have excelled all other men, that God has appeared in their form, spoken with their tongue and made use of their hands, for which reason, they say, we attribute divinity to them. And, to support these blasphemies, they tell several miraculous things of Ali, as his moving the gates of Khaibar, which they urge as a plain proof that he was endued with a particle of divinity and with sovereign power, and that he was the person in whose form God appeared, with whose hands he created all things, and with whose tongue he published his commands; and therefore they say he was in being before the creation of heaven and earth. These extravagant fancies of the Shiites, however, in making their imams partakers of the divine nature, and the impiety of some of those imams in laying claim thereto, are so far from being peculiar to this sect that most of the other Mohammedan sects are tainted with the same folly.

Thus far we have treated of the chief sects among the Mohammedans of the first ages, omitting to say anything of the more modern sects, because they are little noticed by their own writers, and would be of no use to our present design. It may be proper, however, to allude briefly to the great schism at this day existing between the Sunnites and the Shiites, or partisans of Ali, and maintained on either side with implacable hatred and furious zeal. Though the difference arose at first on a political occasion, it has notwithstanding been so well improved by additional circumstances, and the spirit of contradiction, that each party detest and anathematize the other as abominable heretics and farther from the truth than either the Christians or the Jews. The chief points on which they differ are—1. That the Shiites reject Abu Beer, Omar and Othman, the first three khalifs, as usurpers and intruders, whereas the Sunnites acknowledge and respect them as rightful imams. 2. The Shiites prefer Ali to Mohammed, or, at least, esteem them both equal, but the Sunnites admit neither Ali nor any of the prophets to be equal to Mohammed. 3. The Sunnites charge the Shiites with corrupting the Koran and neglecting its precepts, and the Shiites retort the same charge on the Sunnites. 4. The Sunnites receive the Sonna, or book of traditions of their prophet, as of canonical authority, whereas the Shiites reject it as apocryphal and unworthy of credit. And to these disputes, and some others of less moment, is principally owing the antipathy which has long reigned between the Turks, who are Sunnites, and the Persians, who are of the sect of Ali.

As success in any project seldom fails to draw

in imitators, Mohammed's having raised himself to such a degree of power and reputation by acting the prophet induced others to imagine they might arrive at the same height by the same means. His most considerable competitors in the prophetic office were Moseilama and al Aswad, whom the Mohammedans usually call the two liars.

The former was of the tribe of Honeifa, who inhabited the province of Yamana, and was a man of great influence among them. He headed an embassy sent by his tribe to Mohammed in the ninth year of the Hejra, and professed himself a Moslem; but on his return home, considering that he might possibly share with Mohammed in his power, the next year he set up for a prophet also, pretending to be joined with him in the commission to recall mankind from idolatry to the worship of the true God; and he published written revelations, in imitation of the Koran. Moseilama, having formed a considerable party among the people of Honeifa, began to think himself upon equal terms with Mohammed, and sent him a letter, offering to go halves with him, in these words: From Moseilama, the apostle of God, to Mohammed, the apostle of God. Now let the earth be half mine and half thine. But Mohammed, thinking himself too well established to need a partner, wrote him this answer: From Mohammed, the apostle of God, to Moseilama, the liar. The earth is God's; he giveth the same for inheritance unto such of his servants as he pleaseth, and the happy issue shall attend those who fear him. During the few months which Mohammed lived after this revolt, Moseilama rather gained than lost ground, and grew very formidable; but Abu Beer, his successor, in the eleventh year of the Hejra, sent a great army against him, under the command of that consummate general Khaled Ebn al Walid, who engaged Moseilama in a bloody battle, in which, the false prophet happening to be slain by Wahsha, the negro slave who had killed Hamza at Ohod, and by the same lance, the Moslems gained an entire victory, ten thousand of the apostates being left dead on the spot and the rest returning to Mohammedanism.

Al Aswad, whose name was Aihala, was of the tribe of Ans, and governed that and the other tribes of Arabs descended from Madhij. This man was likewise an apostate from Mohammedanism, and set up for himself the very year that Mohammed died. He was surnamed Dhu'lhemar, or the master of the ass, because he used frequently to say, The master of the ass is coming unto me; and pretended to receive his revelations from two angels named Sohaik and Shoraik. Being skilled in legerdemain, and having a smooth tongue, he gained on the multitude by the strange feats which he showed them and the eloquence of his discourse; by these means he greatly increased his power; and having made himself master of Najran and the territory of al Tayef, on the death of Badhan, the governor of Yaman fir Mohammed, he seized that province also, killing Shahri, the son of Badhan, and taking to wife his widow, whose father, the uncle of Firuz, the Deilamite, he had also slain. These news being brought to Mohammed, he sent to his friends and to those of Hamdan, a party of whom, conspiring with Kais Ebn Abdd' al Yaghuth, who bore al Aswad a grudge, and with Firuz and al Aswad's wife broke by night into his house, where Firuz surprised him and cut off his head. This was done the very night before Mohammed died. It is said that Mohammed on this occasion told those who attended him that before the day of judgment thirty

more impostors, besides Moseilama and al Aswad, should appear, and every one of them set up for a prophet. The whole time of Aswad's rebellion was about four months.

In the same eleventh year of the Hejra, but after the death of Mohammed, as seems most probable, Toleiha Ebn Khowailed set up for a prophet and Sejjaj Bint al Mondar for a prophetess.

Toleiha was of the tribe of Asad, which adhered to him, together with great numbers of the tribes of Ghatfan and Tay. Against them likewise was Khaled sent, who put them to flight, obliging Toleiha with his shattered troops to retire into Syria, where he stayed till the death of Abu Beer; then he went to Omar and embraced Mohammedanism, and having taken the oath of fidelity to him, returned to his own country and people.

Sejjaj, surnamed Oum Sader, was of the tribe of Tamim, and the wife of Abu Caidala, a soothsayer of Yamana. She was followed not only by those of her own tribe, but by several others. Thinking a prophet the most proper husband for her, she went to Moseilama and married him, but after she had stayed with him three days, she left him and returned home. What became of her afterward we do not find.

In succeeding ages several impostors from time to time started up; some made a considerable figure and propagated sects which continued long after their decease. We shall give a brief account of the most remarkable of them, in order of time.

In the reign of al Mohdi, the third khalif of the race of al Abbas, one Hakem Ebn Hashem, originally of Meru, in Khorasan, who had been an under-secretary to Abu Moslem, the governor of that province, and afterward turned soldier, passed thence into Marwar'nahar, where he gave himself out for a prophet. He is generally named by the Arab writers al Mokanna, and sometimes al Borkai—that is, the veiled—because he used to cover his face with a veil, or a gilded mask, to conceal his deformity, having lost an eye in the wars, and being otherwise of a despicable appearance; though his followers pretended he did it for the same reason as Moses did, viz., lest the splendor of his countenance should dazzle the eyes of the beholders. He made a great many proselytes at Nakhshab and Kash, deluding the people with juggling performances, which they accepted as miracles. This impostor, not content with being reputed a prophet, arrogated divine honors to himself, pretending that the deity resided in his person; and the doctrine on which he built this was the same with that of the Gholaites, above mentioned, who affirmed a transmigration or successive manifestation of the divinity, through and in certain prophets and holy men, from Adam to these latter days, but the particular doctrine of al Mokanna was that the person in whom the deity had last resided was the aforesaid Abu Moslem, and that the same had, since his death, passed into himself. The faction of al Mokanna, who had made himself master of several fortified places in the neighborhood of the cities above mentioned, growing daily more and more powerful, the khalif was at length obliged to send an army to reduce him; and at their approach al Mokanna retired into one of his strongest fortresses, which he had well provided for a siege, and sent his emissaries abroad to persuade people that he raised the dead to life and knew future events. But being besieged by the khalif's forces, when he found there was no possibility for him to escape he gave poison to his whole family and all that were with him in the castle; and when they were

dead, he burnt their bodies, together with their clothes and all the provisions and cattle; and then, to prevent his own body being found, he threw himself into the flames, or, as others say, into a tub of nitric acid or some other preparation, which consumed every part of him except his hair; so that when the besiegers entered the place they found no creature on it save one of al Mokanna's concubines, who, suspecting his design, had hid herself and discovered the whole matter. This contrivance, however, produced the effect which the impostor designed among the remaining part of his followers; for he had promised them that his soul should transmigrate into the form of a gray-headed man riding on a grayish beast, and that after so many years he would return to them and give them the earth for their possession; the expectation of which promise kept the sect in existence for several ages after under the name of Mobeyyidites, or, as the Persians call them, Sefid jamelghian—i. e., the clothed in white, because they wore their garments of that color, in opposition, as is supposed, to the khalifs of the family of Abbas, whose banners and habits were black. The historians place the death of al Mokanna in the one hundred and sixty-second or one hundred and sixty-third year of the Hejra.

In the year of the Hejra 201, Babec, surnamed al Khorremi and Khorremdin, began to assume the title of a prophet. We do not find what doctrine he taught, but it is said he professed none of the religions then known in Asia. He gained a great number of devotees in Abherbijan and the Persian Irak, and grew powerful enough to wage war with the khalif al Mamun, whose troops he often defeated, killing several of his generals, and one of them with his own hand; and by these victories he became so formidable that al Motasen, the successor of al Mamun, was obliged to employ the forces of the whole empire against him. The general sent to reduce Babec was Afshid, who, having overthrown him in battle, took his castles one after another with invincible patience, notwithstanding the rebels gave him great annoyance, and at last shut up the impostor in his principal fortress, which being taken, Babec found means to escape in disguise with some of his family and principal followers, but taking refuge in the territories of the Greeks, was betrayed by Sabel, an Armenian officer, who caused him to be put to an ignominious and cruel death. This man had maintained his ground against the power of the khalifs for twenty years, and had cruelly put to death over two hundred and fifty thousand people, it being his custom never to spare man, woman or child, either of the Mohammedans or their allies. The sectaries of Babec which remained after his death seem to have been entirely dispersed, there being little or no mention made of them by historians.

About the year 235 one Mahmud Ebn Faraj pretended to be Moses resuscitated, and played his part so well that several people believed in him and attended him when he was brought before the khalif al Motawakkel. That prince, having been an ear-witness of his extravagant discourses, condemned him to receive ten buffets from every one of his followers and then to be drubbed to death, which was accordingly executed, and his disciples were imprisoned till they came to their right minds.

Such is a narrative of the rise and progress of Mohammedanism. An exposition of modern divisions and sects which have arisen in later years in the East does not lie within the scope of this article.

## HISTORY OF THE EARLY CHRISTIAN CHURCH, EARLY PROGRESS, PRIMITIVE FATHERS, HERESIES, PERSECUTIONS, AND VICTORY OVER PAGANISM.

CHRISTIANITY stands out as the religion of mankind. It recognizes man in his legal and moral relations to God, his guilt as a transgressor, his weakness and need because he is the subject of moral evil, and it holds forth for his acceptance all that humanity can require for pardon, peace and hope throughout a glorious immortality, while it provides not only a title to bliss, but a meanness for the joy and the glory that await the redeemed. Other religions have been adapted to individual nations, but Christianity is adapted to men as men, and thus it rises above national prejudices and unites the faithful whether Jews, Greeks, Romans, the children of Shem or of Ham or of Japheth, as the children of God. At first Christianity was regarded as a despised Jewish sect, but this estimate changed when, by the outspreading influence which the gospel of Jesus produced among the heathen as well as among the Jews, the universal tendency of Christianity became more clearly understood.

The rapid spread of Christianity in the apostolic age is one of the most memorable facts in the history of our race; and before entering on any historical details of the early progress of Christianity, it may be well to note the providential preparations which the great Head of the Church had ordered with a view to the speedy extension of the faith. The apostle Paul, in reference to the advent of Christ, states that he appeared "when the fullness of time was come," Gal. iv. 4; and when the condition of the world is examined, it will be found that a process of preparation had been going on for ages, which indicates the superintending care and overruling providence of the divine hand in bringing the nations of the earth into such a state that the way was made ready for the joyous acceptance of the gospel of God.

When Christ ascended to the heavens and gave commission to his apostles to go into all lands and preach the gospel to every creature, there were three great varieties of national life which ruled among mankind, and which divided the world between them. The Jew, the Greek and the Roman had left their impress on the civilization of the age, and even in Jerusalem itself there were abundant evidences that the city had become largely cosmopolitan in its character. Herod the Great, who had rebuilt and adorned the temple, erected even within the walls a theatre for Greek and Roman amusements, and in the neighboring plain he built a large amphitheatre. The coins which circulated in Jerusalem and Judea were marked with Greek inscriptions; and the piece of money (the silver *Denarius*) which was brought to our Lord, Matt. xxii., Mark xii., Luke xx., had on it an image of the Roman emperor, and the inscription was in Latin. Greek and Roman names were now common in Jewish families, and Greek and Latin words were common in the popular language of the day. The populace in the rural regions adhered to their old and venerated dialect, but Latin was the language of the law courts and of official correspondence among the legal authorities. The transition state of the age in Judea may be seen in the fact that when Paul was in danger from the

mob in Jerusalem, he addressed the commander of the garrison in Greek, and turning round he spoke to his countrymen in Hebrew, while the letter which Claudius Lysias sent with the guard which conveyed him to Felix and the speech of the lawyer Tertullus were both in Latin. Even the sanctity of the temple had to be guarded by inscriptions in Latin and Greek, which were posted up at the steps which led from the outer to the inner court to prevent all aliens from intruding into the sacred court of the Hebrews, and this is in entire accordance with the incident mentioned by the evangelists, that when our Lord was crucified "the superscription of his accusation" was written above his cross in letters of Hebrew and Greek and Latin. Thus our Lord appeared; and having finished his work, he ascended to his Father, sending his apostles forth at the confluence of three great civilizations. Judaism had done the work for which it was established, the Greek civilization had affected the world from the Indus in the East even to Rome itself, and the Roman element had now entered on its mission, and was contributing unintentionally its share to the spread of the "good news" which was to be heralded through all nations.

The Jewish civilization has already in this work received such ample treatment that little is needful to be said in this place except to direct the attention of the reader to a few leading facts. The distinguishing feature of the Jewish system was religion. Everything in Jewish life, their prophets, their miracles, their rites and festivals, their sacrifices and everything in their public and private life, was connected with a religion which they knew was revealed and given in most solemn trust by the Most High. Their poetry, their leaders and their wars were religious; even their ordinary household transactions and the details of their every-day life were affected by their religion and the ceremonies which ever held that religion up before their minds. Then, again, the Jew differed from the heathen. Among the latter there might be an elevated philosophy and an esoteric faith, the property of the learned, who looked down with contempt on the vulgar worshippers of fabled gods and goddesses, and who bowed before images of their own formation. The religion of the priest was equally the religion of him who tilled the soil, the monarch and the peasant worshiped together at the same service, and the shepherds of Gilcad had the same share in the religion of Moses as the rabbis of Jerusalem. All were taught that the great Author of creation was the fountain of all good, and the only object of adoration. The authority and will of Jehovah was the rule of life, and the motive and support of all holiness. Religion involved morality, and no morality could exist apart from religion. The gods of Greece and Rome were the personifications of human passions, and they often served as examples and patrons of vice; but the Jew was taught the unity of the Godhead, the distinction between the eternal, the infinite Creator and the creature, and the utter folly of polytheism and the

sin of bowing down before an idol. The Scriptures of the Jews, which made the popular mind familiar with the idea and fact of Revelation, made them equally familiar with the guilt of sin, their need of forgiveness and purification; while it encouraged them to a spirit of prayer, of reliance on divine aid, and led them to feel that only in the favor and grace of God could they have strength for every duty. Thus on the hills of Judea there was a divine light which never shone on the mountains of Greece or on the Italian plains. The Parthenon in its beauty shone under the light of heaven, but it cast no light down among the groveling worshippers who danced around the statues of their licentious deities. On the other hand, the religion of the Jew spoke of a God of holiness, the searcher of the heart, and of purer eyes than to look on sin or iniquity. Another feature of the Jewish faith was the remarkable fact that it always projected the mind of the worshiper forward and pointed to the future. Much as the Jew had when the tabernacle and temple services were established, the hopes of the people were directed onward to One who was to come. Their types, their promises, their sacrifices, kept the eye of faith watchful, and led the people to live in expectation of a Messiah. Greeks and Romans spoke of a golden age, but it was among the past; and while they felt that there was nothing in their faith to fill the void of their souls in the present life, if they thought at all, they felt that it was powerless to enlighten and sustain in presence of the future. On the other hand, the Jew might fail, and he often did fail, to use the light which he enjoyed; but the arrangements of Providence effected among the Jews the objects proposed in making them the depositories of a faith which was revealed from heaven. After their Babylonish experiences they never lapsed into idolatry. They presented to the world the only example which the nations displayed of a people who believed in one God. Thus settled in the faith of monotheism, and awaiting the advent of the promised Messiah, it only remained that a social change should be effected in their state, in order to prepare them for their part in spreading the faith when the Deliverer should appear in the "fullness of time." That change in due time and by providential causes was accomplished.

It does not lie within the compass of this essay to enter minutely into detail on the subject of Jewish dispersions toward the west. Toward the east their dispersion began early, and they soon rose to positions of power and trust. Before the time of Alexander the Great they had settled in Phoenicia and Syria. Antiochus the Great carried two thousand Jewish families to Lydia and Phrygia, whence they spread into Pamphylia and Galatia, and along the western coasts from Ephesus to Troas. By the time of Jeremiah they were in Africa, and they were a power in Alexandria from the days of Alexander. They went southward to Ethiopia, the country of Queen Candace; and westward they spread in great numbers to the "parts of Libya about Cyrene." It was easy for the Jew to

pass into Europe over the Archipelago, and they settled in numbers in the cities from Philippi to Corinth, Acts xvi. 14; xviii. 18. That they prevailed in Thessaly, Boeotia, Macedonia, Etolia and Attica, in Argos and Corinth, is attested by Philo; and St. Luke shows how they were scattered through Macedonia and Greece, and that they had settled in Rome. At first Jews were brought to Rome to decorate a victory, and to march in the triumphal procession of a conqueror, but they were freed from bondage, and in time they made many proselytes even in the capital. That they were found in the island of Sardinia is well known, and there is reason to believe that they have extended into Gaul; and thus these emigrants and their descendants were scattered abroad, having in their habitations the knowledge of the great God who hath made the heavens and the earth, and who, in the revelation which he had given to them, had led them to look with undying hope for the advent of a Messiah who would come as the Healer of the nations.

Thus in process of time the Jewish mind became familiar with the practice of leaving their old rural homes. The narrow limits of their fatherland had become too strait for them; and when the outstretching arms of the Roman power had grasped all the shores of the Mediterranean, and made it a Roman lake, the provinces which passed under the sway of the Roman power contained a fair representation in their towns and cities of the Jewish people. The geographical position of Judaea facilitated this emigration. Egypt was at their door, and Egypt opened the way along the African shore to the Greek colonies which lay to the west. From Tyre and Sidon, Antioch and the cities of Syria were brought within reach, and the corn-ships from Alexandria which coasted the shores, or which risked the voyage from one harbor to another, carried the venturesome Jew to the marts of Asia Minor, to the cities of Greece and of Sicily and to the wealth and luxury of Rome. Thus the Jew, with his conception of the God eternal, invisible, the creator and ruler of all, with his belief in Revelation, his acknowledgment of guilt and sin, his faith in atonement and sacrifice for guilt, and his hope and longing expectation in a coming Messiah, was scattered abroad among the nations, that when he received the assurance of the fact that the Messiah had come, and that he had died for our sins and risen again according to the Scriptures, he might become a light to lighten the Gentiles, and to tell them of a Saviour who had arisen in Israel.

II. Another agency of vast influence was under preparation for its share in the promotion of the gospel, while the Jew was made ready to spread abroad the knowledge of salvation. The Greeks were the great colonizers of the ancient world. While the Egyptians with their peculiar culture confined themselves to the valley of the Nile, the Greeks were roaming about everywhere in their ships. Their mental energy was equalled by their physical restlessness. They had a wonderful capacity of adapting themselves to the habits of the people among whom they sojourned. Like the Anglo Saxons of the present time, they carried their civilization from country to country; and though they were not addicted to conquest by prowess of arms, they left their impress wherever they settled. Thus Southern Italy came to be recognized as Greece even at the time when the Roman republic was rising into power, and their influence in Sicily was displayed by the magnitude and wealth of its Greek cities. When Alexander

swept over Asia, he carried the elements of the Greek civilization along with him. New cities were built, and new lines of trade and intercourse were established. Even the mountain ranges of Western Asia felt their fastnesses occupied, and the Tigris and the Euphrates became Greek rivers. Accordingly, over all these widely separated regions the forms of Greek civilization prevailed. The language, the forms of art, poetry, literature, philosophy, all that gave tone and elevation to Greece, were carried to every Grecian settlement; and thus the language of Athens was heard among the Jewish colonies in Babylon. Even when the empire of Alexander was divided, the capitals which arose under his successors contributed to the sway of the elements which prevailed in Greek life. Like Berlin and St. Petersburg, which have risen suddenly, so Alexandria in Egypt and Antioch rapidly became influential centres of commercial and civilized life; both became centres of Christian life and missionary activity, and both rose to great eminence in the history of the Christian Church; but before they attained to that eminence they served their purpose of opening up lines of intercourse with distant lands, and spreading the Greek language, which for ages was to be the language of the Christian Church.

Of all the elements which the spread of the Greek colonies carried with them, including language, poetry, history, philosophy and art, the most influential was the language. Greek, which is the richest and most delicate tongue that the world has ever known, became the language of Christian theology. It has been well observed that "it was not an accident that the New Testament was written in Greek—the language which can best express the highest thoughts and worthiest feelings of the intellect and heart, and which is adapted to be the instrument of education for all nations; nor was it an accident that the composition of these books and the promulgation of the gospel were delayed till the instruction of our Lord and the writings of his apostles could be expressed in the dialect of Alexandria. This also must be ascribed to the foreknowledge of Him who 'winked at the times of ignorance,' but who 'made of one blood all nations of men for to dwell on all the face of the earth, and determined the times before appointed, and the bounds of their habitation,'" Acts xvii. 30, 26.

The language of Palestine was wanting in flexibility and in a capacity to express minute and varied shades of thought. It enshrined great facts and great principles; but when the minute relations of doctrine required to be stated by a Paul or a John, it needed the elasticity and wondrous fertility of the Greek tongue, with its particles and moods and voices, to give expression to the inspired thought. And so also in the future history of the Church, the mother tongue of Ignatius, at Antioch, which Cicero learned at Athens, which Philo wrote at Alexandria, and in which Chrysostom declaimed at Byzantium, was required by Athanasius to express the faith in opposition to heresy; and the wonderful fact should never be forgotten that the Greek tongue is so elastic and expressive of different ideas that the presence of a letter expresses heresy, but its omission is an avowal of the faith. Such was the language which, as a vehicle of thought, had spread over all the nations around Judaea, when another influence began to prevail, and which also ministered to dissemination of the faith.

III. The Roman empire was the growth of centuries. It rose by degrees on the west coast of

Italy, and gradually but surely it extended northward into Etruria, and southward into Campania. In time it reached beyond the confines of Italy, and six hundred years after the foundation of Rome, Africa had been seized on, the Roman eagle had descended on Greece, and looking over the Aegean Sea, saw that the East was ready as its prey. Rapidly, like Britain in modern times in India, and Russia in Central Asia, province after province acknowledged the Roman sway, and before the advent all the coasts from Ephesus (the great Ionian city) to Tarsus, in Cilicia, Antioch, and onward in a southerly direction to Alexandria, in Egypt, and west to Cyrene, these regions were subject to the city on the Tiber. Vastly different from the progress of the Greeks was the advancement of the Roman power. Wherever the Roman eagle was carried there, was felt the presence of an external government. The idea of law, as it has been well observed, grew up with the growth of the Romans, and wherever they went they carried it along with them. They aimed at universal conquest and permanent occupation; and they held that they might control and modify according to their ideas of social order and law. Where the Greeks settled they brought commerce and science in their train; where the Romans took up their abode they began to organize, to bring all the powers of law and order to prevail, and so they aimed at reducing every new province to the model which ruled in the Roman mind. The spirit of the Roman age is attested by the magnitude of the public works which were raised for governmental purposes, of which many still remain. They aimed at binding all the provinces into one great consolidated empire, controlled by the legions which marched from region to region, with a view to maintain obedience and order. For this purpose, and for other uses, great roads were absolutely necessary, and among all the nations of antiquity the Romans stand out as the road-builders of ancient times. Britain, Gaul, Italy, Greece and Asia were traversed by their great highways; and thus a preacher of the cross could start on a missionary tour from Southern Scotland, and by means of a Roman road he could travel to the south coast of England. Crossing the Channel he might traverse Gaul and reach the southern coast of Italy on a similar highway; and so in Greece, and after reaching the shore of Asia he might prosecute his journey toward the East on a causeway constructed and maintained by the imperial power.

Another point of great importance must be taken into the account. Widely scattered as the Greek communities were, they never carried about with them the idea of universal dominion and the determination to reduce all subjugated provinces to the obedience of Greek law. Hence a citizen might be safe in one country, but his life might be in danger if he ventured into another. The word "foreigner" usually meant an enemy. But all this was changed when the eagles of Rome floated over province after province brought under Roman sway. A man who was able to say, "I am a Roman citizen," felt that he had a safeguard around him for his life and liberty; and though many of the rulers of provinces and dispensers of law were like Appius and Verres, like Pilate and Felix, still the announcement of "citizenship" often acted like a talisman, and saved multitudes from bonds and stripes, from imprisonment and death. It was thus that Paul was able to compel a reckless magistrate at Philippi to refrain from oppressing him, and in dread to apologize for his

misconduct, while he set the apostle at liberty. Both in Judaea and in Macedonia his right of citizenship rescued him from peril. He converted one governor in Cyprus, by another he was protected in Achaia, by a third he was saved from a Jewish mob in Jerusalem and forwarded by still another to Rome. Thus Roman ambition, the lust of conquest, the energetic enforcement of law and the stern resolve that wherever the imperial standard was erected there Roman customs should prevail, undesignedly tended to secure the rapid advancement of the knowledge of Christ. With a language so general as the Greek, and under the protection of a power everywhere dominant as the Roman was, the apostle or the Christian missionary could go everywhere preaching the word.

IV. Still another and a weighty influence demands our notice. The rapid advancement of Rome to greatness left sad traces of ruin and misery in the train of conquering legions. The close of the republic was characterized by cruel suffering. Civil wars alternated with slave rebellions, and then came wars of conquest, so that every region of the vast empire had witnessed deplorable scenes of bloodshed. No land rapidly recovers that has been desolated by fierce, protracted internal warfare. Every subjugated province had thus suffered; and even Italy itself was bereft of its freemen by the drainage of her people to maintain the rank and file of the legions in foreign wars. Wealth had accumulated in some hands, and a senseless and extravagant luxury existed by the side of military colonies and huge slave factories. Cruelty and profanity abounded. External government prevailed under the pressure of the legions, but under the surface of society a chaos of opinions and morals prevailed. Among the wealthy and the elevated all regard for the deities had departed. The writings of Juvenal and Tacitus attest the corruption which festered in all ranks, alike in the Senate and the family; and thus, while the licentious creeds and practices of Greece had spread over Italy and poisoned society, a slave system of excessive severity held a great part of the people in the fetters of a hopeless bondage, out of which they could not escape. For their life was servitude; they had nothing, their lives were not their own; earth had no solace for them; in darkness about the future, they had no religion to sustain in time, to speak of hope, to gild the future with the light of freedom and to hold forth the faithful promise of a blessed immortality. Thus, in the very condition of the Roman empire and the wretched state of its seething, mixed population there existed a negative preparation for the gospel of Christ; and it has been wisely said that "this tyranny and oppression called for a *Consoler* as much as the moral sickness of the Greeks called for a *Healer*, and a Messiah was needed by the whole empire as much as by the Jews, though not looked for with the same conscious expectation." Thus, by the mysterious wisdom and the overruling providence of the Most High, a combined series of influences were prepared which tended to open the nations for the reception of the gospel of the grace of God. When the maturity of the Roman empire was completed, when all parts of the civilized world were bound together in one empire, when a common organization pervaded the whole, when channels of communication were everywhere opened, when new facilities for traveling were provided, when the Jew with his monotheistic faith was scattered through the nations, and when the spread of a common tongue was effected, then was

"the fullness of times," and then the Messiah came.

V. Then again in the gospel itself there were elements of power which affected the masses of the population in the empire in a manner that no former age had experienced. A social malady had affected all classes of the population. The lower ranks of life suffered from the exactions of the upper, and the vast masses who everywhere were held in bondage felt that for them life had no joys. But from the East came these strange men who heralded the wondrous news that there was an eternal freedom for the captive. They might be downtrodden and degraded by the classes who used them for selfish interests, but here were messengers to tell them of an exaltation to a holy brotherhood, in which, as kings and princes, they would reign for ever and ever. As they were, they had nothing, but here were men who said, "All things are yours, and you are Christ's." Against tyranny and suffering they were helpless, but the gospel told them of One who is mightier than all their enemies, who would never leave them, who engaged to be their light, their shield, their provider, their upholder, their ever-present friend in life, their support in death, and in eternity the source of unfading joy. If they had thought at all of what they were and whither they were going, they felt that there was a void and darkness in their minds, and that a burden weighed on their hearts, from which their gods gave no deliverance, but here in the gospel was light and life, for it told of immortality, and even mightier than death and the grave, it gave assurance of a glorious resurrection. Then again, among the higher ranks, the fact was realized that society was disorganized and out of joint. Wealth and extravagance failed to satisfy; and, though the great body of the population toiled for the things that perish in the using, still there were those who felt that life, such as they knew it, was but vanity. To them as to the slave the gospel was a message of power. It spoke of better and more enduring things than aught that they had experienced, of peace that the world had never given, of soul rest and heartfulness which they had never known. Men dislike pain and start back from suffering. To die and cease to be, to think that all beyond the present with its weary load must be a blank and an eternal loss of consciousness,—men naturally put these things far from them, and accordingly there was felt to be in that gospel which drew aside the curtain and permitted the Christian believer to see that if the earthly house of this our tabernacle were destroyed there is a building of God, an house not made with hands, eternal in the heavens, awaiting him in a better land, there was a mighty power which came to his soul that cheered and saved.

VI. That the gospel was also divinely accredited by such evidences as showed that it was from God is evident. He who said to his apostles, "Go ye therefore and teach all nations, baptizing them in the name of the Father and of the Son and of the Holy Ghost, teaching them to observe all things whatsoever I have commanded you," remembered his promise that he would ever be with them. Having burst the bonds of the grave and shown himself alive after his passion by many infallible proofs for forty days, he commanded them to wait at Jerusalem for the promise of the Father, that, being endued with power when the Holy Ghost would come upon them, they might be witnesses for him both in Jerusalem and in all Judaea and in Samaria and unto the uttermost part of the

earth. All that this promise included was fulfilled, and whether it was at the gate of the temple that the lame was made to walk with strength and gladness, or that the prison-gates opened and gave freedom to an apostle, or that fraud and hypocrisy were unveiled by the deaths of Ananias and Sapphira, or that special power was vouchsafed to garments from the body of Paul, or that even the venom of the viper was not permitted to injure him, the powers with which the apostolic messengers were clothed, the nature of the message which they proclaimed and the lives which they led, all united in showing that the gospel was from God. Thus clothed with authority and led by the Spirit, the apostles and the apostolic messengers went everywhere preaching the word, and great were the multitudes of those who believed.

VII. Attempts have been made to account for the rapid spread of the gospel in the apostolic age by a reference to the fact that a regard for the heathen deities had ceased to influence people, and that any religion would have been acceptable which from its mere novelty appealed to the popular mind. Those who take this position endeavor to account for the remarkable results which followed the labor of the apostles, without admitting any need for the presence of divine power, or aught more than the ordinary occurrences of daily life. The attempt is futile when made, as it is, in the face of facts which such skepticism always ignores. The divine purpose remembers the means, as well as the end to be attained; and this is as truly illustrated in the influences which tended to the rapid spread of Christianity as it was in the effect of the causes which led to the Babylonish captivity, or to the decay of the Greek kingdoms before the Roman power. A candid examination of the subject must recognize all the elements which have been briefly adverted to in this narrative, as they are all obvious to any intelligent, educated mind. They all had their place in the condition of society in the apostolic age, and they all possessed a character which tended to operate toward the end which they produced. The Jewish dispersion carried throughout the nations the seminal principles of a monotheistic faith; the Greek colonies spread abroad a language in which minute shades of theological ideas could be expressed; the Roman power served for a time to open the nations for the propagators of the new faith; the gospel system contained the moral and spiritual elements which the world, in its distracted, sickened and desponding state, required; this gospel was by signs and wonders authenticated as being a divine message; and while the Author of the gospel promised that the power of the Holy Spirit should accompany the word and cause it to spread abroad, and the results which followed showed how that promise was fulfilled, it was the union of these influences which caused the word so mightily to prevail. When "the fullness of time" had arrived, they were prepared to operate; and hence it came to pass that in the first century, so overwhelming was their power, that the scattered provinces of the Roman world all heard the message of the grace of God.

#### Progress of the Church, until the Downfall of Paganism and the Establishment of Christianity.

The Acts of the Apostles record the leading incidents of the early progress of the Christian Church, and yet the object of Luke was not to enter into a minute detail of all the events which

occurred in the different countries into which the gospel had been carried during the period over which the narrative runs. The command of our Lord that the apostles should tarry at Jerusalem until the promised blessing should descend upon them was obeyed; and when the Pentecostal effusion of the Spirit took place, the results were immediate and extensive; Jews from all the East, from Africa, from Rome and Italy, became affected and multitudes believed. The narrative in the early chapters of the Acts shows how this great awakening, instead of producing an honest rational inquiry on the part of the priesthood and the upper classes, only stimulated them to more bigoted persecution, which had an effect diametrically opposite to their expectations. The terrified disciples, in dread of their lives, fled northward to Samaria and to other parts of Syria, but they carried the gospel along with them. Fired with zeal, they proclaimed the wondrous story that Jesus of Nazareth, who by signs incontestable had shown himself to be the Son of God, had died for our sins, and risen again from the dead, according to the Scriptures. They proclaimed his victory over death and the grave, and they pointed to the mansions in the heavens into which he had entered as the forerunner of those who fled to him for salvation. Dread of being apprehended, and the difficulty of finding a support in strange places, obliged these wanderers to roam about, and wherever they went they were heralds of the good news.

Portiwith Antioch and Damascus become centres of gospel influence. The zeal of Saul as an opponent of the "Nazarene" stirred him up to go to Damascus, "breathing out threatenings and slaughter against the disciples of the Lord." His mission attests the unsettled and transition condition of the law at that time in Palestine; for while the power of life and death had been withdrawn from Jewish courts, the Sandedrim still held to the claim that in spiritual matters it was lawful even to follow apostate or flagrant transgressors to the large cities in adjoining regions, and bring them up to Jerusalem for judgment, according to the nature of their offence. Saul reaches Damascus, but only to receive that light and life which turned the benighted, persecuting Pharisee into the humble, earnest and zealous missionary of the faith which once he destroyed. Joppa and Caesarea had already heard the gospel; for "they which were scattered abroad upon the persecution that arose about Stephen, traveled as far as Phoenice and Cyprus and Antioch," and thus the sea-coasts heard the gospel by means of the wanderers who, flying from persecution, were seeking the asylum of a distant home. The barbarity of Herod and the murder of James increased the alarm, and numerous terrified believers fled from the scenes of danger, and they too became instrumental in disseminating the word.

At length the missionary work of the Church is formally resolved on, and Paul and Barnabas are solemnly set apart at Antioch, by the command of the Holy Ghost, to carry the gospel to the Gentiles, and now the great apostle enters on a career of labor and self-sacrifice, of devotion and faith, of zeal and endurance, of masterly exhibition of rhetorical power and logical acuteness, of consummate wisdom in adapting himself to every emergency, which have made him the prominent figure in the apostolic age, the most successful missionary of the Christian faith, and a leading character among the greatest of mankind.

The history of the early planting of the churches

is not fully given in the Acts of the Apostles. The apostles are introduced as waiting at Jerusalem until the promise of the ascended Saviour should be fulfilled; and when the Pentecostal effusion of the Spirit was vouchsafed, the incidents are recorded which took place in connection with the great increase of the membership and the troubles which immediately followed, and which led to the dispersion of the brethren. Stephen had met his death because he had shown that Judaism was intended to be temporary, and it had become apostate. James the Elder fell under the hand of Herod Agrippa, Peter preaches in Lydda, Joppa, at Caesarea, and receives Cornelius, the first Gentile convert, into the church. The word is proclaimed at Phoenice, Cyprus and Antioch, where the name of Christian is first applied to the disciples. During the first missionary journey of Paul with Barnabas, he visits Cyprus, Pamphylia, Lystra and Derbe, and many churches are gathered out of the heathen. The conflict about Jews and Gentile is settled in favor of Paul, and now Paul and Barnabas separate, having disagreed about Mark, and the great apostle enters on his second journey. Such was the state of the Church when it reached the close of the first half century of its history. Paul's third journey carries him through Asia Minor, Macedonia and Greece; he establishes a church at Ephesus, where he remains three years, and by his labors in that city he makes it a place of great influence.

Again at Jerusalem his life is endangered and he is removed to Caesarea for safety, whence after an unjust imprisonment he is carried to Rome, and thus in the great capital of the empire he at length, even while a prisoner, is permitted to labor in founding a great Christian Church.

By the close of the first century nearly all the provinces of the empire, including Palestine, Syria, Parthia, Arabia, Egypt, Asia Minor, Macedonia, Greece, Illyria, Italy and Gaul had heard the glad tidings of the gospel. It is uncertain whether the great apostle of the Gentiles was able to carry out his intention of visiting Spain, but there is a tradition, which has some foundation, that at Rome, Paul was permitted to preach the gospel to persons of influence from Britain, and it is even probable that in the frequent changes of the Roman legions some of the officers and soldiers who knew Paul at Rome, when they acted as his guard, may have carried Christianity through Paul to Britain.

It is a memorable fact that while Luke was led to record the incidents connected with the outgrowth of the Church as the result of the Pentecostal effusion, the success of Peter in opening the door of the Gentiles and the missionary career of Paul, he gives no details of the labors of the other apostles. There is a tradition that connects Matthew with Ethiopia and different places in Asia, while Philip of Bethsaida is reported to have gone to Phrygia in Asia Minor. Thomas called Didymus—i. e., the twin—preached in Parthia, and Origen says he was buried at Edessa, while Jerome affirms that he died in India, and the Syrian Christians on the south-west or Malabar coast hold that they are descendants of an apostolic church which had been planted in India by the labors of that apostle. Andrew, the brother of Simon Peter, carried the gospel through Syria, Thrace and Achaia, while he is reported to have been martyred at Patras in Achaia. Bartholemew went to Yemen, Armenia, and afterward to India, and Simon (Zelotes) is said to have preached in places so widely separated from each other as

Egypt, Lydia in Asia Minor, and Britain, and in the last-mentioned country he is said to have been crucified with his head downward. Matthias died as a martyr in Ethiopia, or in Judea, as some hold, being stoned to death by the Jews. James, known as the Less, "brother" of our Lord, who must be distinguished from James the bishop at Jerusalem, is said to have preached in Palestine and in Egypt, where he also suffered crucifixion.

The seven churches of Asia mentioned in the Revelation show how widely before the death of John the gospel had spread in Western Asia. Of Pergamus and Thyatira little subsequent mention is made in history; but the other five, especially the first two, are distinguished among the most fruitful of the primitive communities. The church of Ephesus, which was founded by St. Paul, and governed by Timothy, was blessed by the presence of St. John during the latest year of his long life. It is related of him that when his infirmities allowed him no longer to officiate he continued to dismiss the audience with the benediction. Ignatius, during his residence at Smyrna, addressed an epistle to the Ephesians bearing testimony to their evangelical purity, and two other epistles addressed about the same period to churches of a later foundation at Magnesia and Trallium or Tralles attest the continued progress of the faith after all the apostles had departed. At the end of the second century the importance of Ephesus was still recognized, and its bishop or pastor, Polycrates, conducted his flock in firm opposition to the first aggression of the Church of Rome.

The province of Bithynia was situated at the south-western extremity of the Euxine Sea. We have no record of any apostolic church being founded here, but that there were Christians in the province is attested by the address of 1 Pet. i. 1, and it is unquestionable that in the very beginning of the second century a great portion of the population had received the faith, for the proofs which exist in pagan authority have never been disputed. Pliny the Younger, a humane and accomplished Roman, was governor of Pontus and Bithynia for about eighteen months, during the persecution of Trajan, and on that subject, A. D. 107, he addressed to the emperor a very celebrated epistle, of which portions are subjoined to show the state of the people and of the times in which he lived, the letter being one of the most valuable documents which have come down from antiquity. After mentioning the difficulty of his own situation, and his perplexity to proceed against men charged with no other crime than the name of Christian, the writer proceeds as follows: "Others were named by an informer, who at first confessed themselves Christians, but had left them some three years ago, some longer, and one or more above twenty years. They all worshiped your image and the statues of the gods; these also revered Christ. They affirmed that the whole of their fault or error lay in this, that they were wont to meet together on a stated day before it was light, and sing among themselves a hymn to Christ, as God, and bind themselves by an oath not to the commission of any wickedness, but not to be guilty of theft or robbery or adultery, never to falsify their word, nor to deny a pledge committed to them when called upon to return it. When these things were performed, it was their custom to separate, and then to come together again to a meal, which they ate in common without any disorder; but this they had forborne since the publication of my edict, by which, according to your commands, I prohibited assemblies.

"After receiving this account, I judged it the more necessary to examine, and that by torture, two maid-servants which were called ministers; but I have discovered nothing besides a bad and excessive superstition. Suspending, therefore, all judicial proceedings, I have recourse to you for advice, for it has appeared to me matter highly deserving consideration, especially upon account of the great number of persons who are in danger of suffering, for many of all ages and every rank of both sexes likewise are accused, and will be accused. Nor has the contagion of this superstition seized cities only, but the lesser towns also, and the open country; nevertheless, it seems to me that it may be restrained and corrected. It is certain that the temples, which were almost forsaken, begin to be more frequented, and the sacred solemnities after a long intermission are revived. Victims likewise are everywhere bought up, whereas for a time there were few purchases. Whence it is easy to imagine what numbers of men might be reclaimed if pardon were granted to those who repent."

It was an early belief that St. Mark first preached the gospel at Alexandria, and founded churches there, and he is expressly mentioned by Eusebius as the first bishop of that city. The same writer asserts that a multitude of converts, both men and women, listened to his instructions from their very first delivery. The population of Alexandria was very numerous, and composed of every variety of race and superstition, so that no general prejudice against the introduction of a new religion could exist there. The city was commercial, active and remarkable for its diligence in the cultivation of every branch of literature. The people grasped at new ideas in philosophy, and they arrived at analyzing and systematizing tenets which appeared to be dissimilar with great eagerness. Even the Jews of Alexandria were less bigoted than in other cities to which they had emigrated, and there is little doubt that in this commercial capital Christianity soon prevailed among all classes of the inhabitants. The emperor Adrian had visited Alexandria, A. D. 134, and a letter which he wrote is preserved, and in it he says: "I have found Egypt in every quarter fickle and inconstant; the worshipers of Serapis are Christians, and those are devoted to Serapis who call themselves Christian bishops. There is no ruler of the synagogue, no Samaritan, no presbyter of the Christians, no mathematician, no soothsayer, no anointer; even Christ, a most seditious and turbulent sort of men. However, the city is rich and populous. . . . They have one God; him the Jews, him all the Gentile people, worship." Notwithstanding the levity of this profligate imperial philosopher, his statements manifestly prove that within a hundred years of the resurrection of Christ his followers formed an important part of the inhabitants of the second city of the empire.

From the time of the council held in Jerusalem, A. D. 52, we have nothing more recorded of Peter in the Acts of the Apostles. It is believed by many that he went to Antioch, where he made some stay, Gal. ii. 11; and thence he journeyed, probably, through Pontus, Galatia, Cappadocia, Asia and Bithynia. There is a tradition that he reached Rome soon after Paul's departure, in A. D. 63, but this fact cannot be verified; and it is impossible to prove that he ever was at Rome, although the tradition of his having been in the great capital has received a wide acceptance.

Jerome says that for seven years he was bishop of Antioch, and that in the second year of Claudius he went to Rome, where he acted as bishop for twenty-five years; but this needs confirmation. In A. D. 64 he wrote his First Epistle, and, as he himself says, from Babylon. Whether this word is to be understood literally of Babylon in Assyria, or Babylon in Egypt, or Babylon in Mesopotamia, has been keenly disputed, while others understood the term figuratively, implying the city Rome, as in the Revelation of St. John, xvii, xviii. The dispute which has long prevailed on this subject is as far from being settled as ever; and it is obvious that any claim which rests for its foundation on the fact that Peter was at Rome and conferred on the officers of the Church there any superiority over other Christian churches must rest on a very unstable basis, and is not worthy of any historical regard. To enter upon this much-disputed question would be unprofitable and unnecessary, for history plainly negatives the assumption: "After the martyrdom of Paul and Peter, Linus was the first that received the episcopate at Rome," Euseb. Hist. iii. 2. Again, the same author observes, in his "Catalogue of the Bishops of Rome," taken from Irenæus: "The blessed apostles, having founded and established the Church, transmitted the office of the episcopate to Linus. Of this Linus Paul makes mention in his Epistles to Timothy. He was succeeded by Anacletus; and after him Clemens held the episcopate, the third from the apostles," Euseb. Hist. v. 6. Tertullian says, "St. Peter did ordain Clement," De Præser. 32. The Apostolical Constitutions declare that "Linus was first ordained bishop of the Roman Church by Paul; but Clemens, after the death of Linus, by Peter in the second place," Const. Ap. vii. 46. But if, as Jerome asserts in respect of Peter, he was bishop of Rome twenty-five years, and others say he was bishop of Antioch seven years previous to his removal to Rome, how is this, if a fact, to be reconciled with the *Apostolical Canon* (14) which states "that no bishop should desert one church and transfer himself to another"? and yet, according to their argument, the example of Peter was before them. The Apostolical Canons are held to have been collected together in the middle of the third century, and they have been ascribed to Clemens Romanus. The whole subject of Peter's connection with Rome is most ably discussed in Dr. Barrow's "Treatise on the Pope's Supremacy," to which the reader is referred, as the object in this narrative is merely to state the leading facts connected with the spread of the gospel without discussing controverted questions.

Our earliest knowledge of the existence of Christianity in France is derived from its calamities. During the persecution of Marcus Antoninus, the churches of Vienne and Lyons sent a relation of their sufferings to those of Asia and Phrygia, which is by some ascribed to the pen of Irenæus. It is written with simplicity and beauty, and is one of the most affecting passages in the ancient history of Christianity. Pothinus, the bishop, with several others, underwent the last infliction. Still, we have no reason to believe that the religion was at that time (A. D. 177) widely diffused in the country; probably, indeed, the same Pothinus first introduced it from the East. Irenæus, the learned and zealous combatant of heresy, succeeded to the dangerous eminence of Pothinus, and under his prolonged and vigilant protection Christianity took deep root and finally fixed itself in the soil of France. According to the best authorities, he died A. D. 202, the popular tradition

being that he fell a martyr, though neither Tertullian nor Eusebius states this as fact.

The gospel spread rapidly along the north coast of Africa, and by the end of the second century the church of Carthage had reached a great eminence. The sore trials and persecutions to which Christians were speedily subjected arrested the growth of the Church for a time in the provinces which were chiefly afflicted; but as soon as a measure of security and peace was again attained the Church on all sides extended; and thus it continued to grow until, in the struggle between paganism and the gospel, the old heathen civilization had to give way and Christianity ascended the throne of the Cæsars.

It is not intended in this brief statement to enter with any critical minuteness into the controversy which has been maintained about the forms of Church order and government. The views of "episcopal" or "prelatical" writers on the one side and of those on the other who hold "non-prelatical" views are accessible to all who may desire to read on the subject. The remainder of this section is chiefly condensed from the "History of the Church," by Dr. Waddington, a Fellow of Trinity College, Cambridge, a prebendary of Chichester and dean of the cathedral in Dublin; and on the subject of the government of the Church at the close of the first century and in the early part of the second he says:

There are many reasons which make it necessary, in the treatment of this subject, to distinguish clearly between what is historically known and what is plausibly conjectured; for it is from the confusion of facts with probabilities that most of the difficulties of this question have arisen. In the first place, it is certain that from the moment in which the early churches attained a definite shape and consistency, and assumed a permanent form of discipline, as soon as the death of the last of the apostles had deprived them of the more immediate guidance of the Holy Spirit and left them under God's especial care and providence, to the uninspired direction of mere men, so soon had every Church respecting which we possess any distinct information adopted the episcopal form of government. The probable nature of that government we shall describe presently, but here it is sufficient to mention the undisputed fact that the religious communities of the Christian world universally admitted the superintendence of ministers, called bishops, before the conclusion of the first century. In the next place, it is equally true that neither our Saviour nor his apostles have left any express and positive ordinances for the administration of the Church, desiring, perhaps, that that which was intended for every age and condition of man, to be the associate and guardian of every form of civil government, should have the means of accommodating its external and earthly shape to the various modifications of human polity. As Dr. Hinds in his "Early Church" has said, "Principles are given, but no specific rules. After all, no form of Church government now exists, or could exist, accurately framed on the model of the earliest, since that was regulated by an inspired ministry and enlightened by extraordinary gifts." It is also true that in the earliest government of the first Christian society, that of Jerusalem, not the elders only, but the "whole Church," were associated with the apostles; and it is even certain that the terms bishop and elder or presbyter were, in the first instance, and for a short period, sometimes used synonymously,

and indiscriminately applied to the same order in the ministry. Theodoret (Com. on 1 Tim. iii. 1), a Father of the fourth century, admits and explains that circumstance as follows: "The same persons were anciently called both bishops and presbyters, while those which are now called bishops were called apostles; but shortly afterward the name of apostles was appropriated to those who were apostles indeed, and then the name bishop was given to those before called apostles." (See also a passage from St. Ambrose cited by Amalarins and Bingham.) Whatever value we may attach to this explanation, it is quite certain that bishops began very early to assume the title of "successors of the apostles," which we find to have been done by Firmilian, Cyprian and other bishops of Carthage. Bishop Pearson is of opinion that in some churches there were bishops and not presbyters; in others, presbyters and not bishops—a plausible opinion, strongly confirmed by the assertions of Clemens and Epiphanius, that in some churches there were bishops and deacons, in others only presbyters and deacons, but that the larger communities had all the three orders. Mosheim, however, considers "the two terms as undoubtedly applied to the same order of men," and such is the plain interpretation of the Scripture passages. From the comparison of these facts it seems natural to draw the following conclusions: that during the lifetime of the apostles they were themselves the directors, or at least the presidents, of the Church; that, as long as they remained on earth, it was not necessary in all cases to subject the infant societies to the delegated authority of a single superintendent, though the instances of Titus and Timothy clearly prove that it was sometimes done; and that, as they were severally removed from the world, some distinguished brother was in each instance appointed to succeed, not indeed to the name and inspiration, but the ecclesiastical duties of the blessed Teacher who had founded the Church. The concurrence of ancient records confirms this last conclusion; the earliest Church historians enumerate the first bishops of the churches of Jerusalem, Antioch, Ephesus, Smyrna, Alexandria and Rome, and trace them in each case from the apostles. And thus it came to pass that for more than twenty years before the death of St. John most of the considerable churches had gradually fallen under the presidency of a single person entitled bishop; and that after that event there were certainly none which did not speedily follow the same name and system of administration. "It is highly probable," says Mosheim, "that the church of Jerusalem, grown considerably numerous, and deprived of the ministers and the apostles, who were gone to instruct other nations, was the first which chose a president or a bishop; and it is no less probable that the other churches followed by degrees such a respectable example." Referring to the Church at Corinth, Dr. Hinds says, "Till the date of St. Clement's Epistle its government had been clearly presbyterial, and we do not learn the exact moment of the change."

**Deacons.**—We have yet made no mention of the deacons, who were the third order in the episcopal Church. The word deacon means minister, and in that sense is sometimes applied to the office of the apostles; but in a general sense only, since we are assured, Acts vi., that the diaconal order was distinct and instituted for a specific purpose. However, it seems certain in the very beginning the office of the deacon was not confined to the mere ministry of the table, since we read that

Stephen disputed publicly on the Christian truth with irresistible wisdom and spirit; and, moreover, that "he did great wonders and miracles among the people." It is equally clear that attendance on the poor was for several centuries attached to it; even after the office of treasurer was held by the bishop, the portion destined to charitable relief continued to pass through the hands of the deacon. It is not so easy to ascertain the extent of their spiritual duties in the earliest Church. Ignatius speaks of them with high respect, and in one place calls them "ministers of the mysteries of Christ." Tertullian distinguishes them from the laity, together with bishops and presbyters. Cyprian asserts that the apostles appointed them as "ministers of their episcopacy and Church." By the Nicene Council they are designated as servants of the bishop. In some churches they were admitted to read the gospel, and that they universally assisted in the distribution of the eucharist, without any share in its consecration. Their early acknowledgment as members of the ministry is proved by their occasional presence in the original synods of the clergy. The deaconesses, of whom we read in early Church history, may probably have been widows appointed, for the better preservation of the ministry from scandal and calumny, to superintend the charitable distribution made to the female portion of the poor.

**Clergy and Laity.**—The origin of the distinction between the clergy and the laity has given rise to much controversy. Bingham is of opinion that it was derived from the Jewish idea in the Christian Church in its earliest days. And Clemens Alexandrinus has expressly declared "that St. John, after his return from Patmos, ordained bishops and appointed such men for clerical ministers as were signified by the Holy Spirit." If the persons here mentioned were actually set apart and consecrated to the ministry, the reality as well as the name of the distinction might with greater assurance plead apostolic authority, but this does not positively appear. On the other hand, the separation of the sacred order is so commonly mentioned by the early Fathers, not by Cyprian only, but by his predecessors Tertullian and Origen, and so invariably treated as a necessary part of the Christian system, that if its origin was not coeval with the foundation of the system, it was at least unrecorded and immemorial. The fairest supposition respecting this question appears to be that the first converts, those who spread the earliest tidings of redemption before the apostles themselves had quitted Judaea, were commissioned to preach the name and diffuse the knowledge of Christ indiscriminately. But it seems equally certain that this commission was of very short duration, and that as soon as in any place converts were found sufficient to form a society or church a bishop or presbyter was ordained for life to minister to them. The act of ordination established the distinction of which we are treating.

According to the earliest form of episcopal government, it would appear that the bishop possessed little, if any, power in matters of discipline, except with the consent of the council of presbyters; that the council possessed no sort of power except in conjunction with him; and that in affairs strictly spiritual, as the ordination of the inferior clergy and the administration of the sacraments, he acted, as some think, with independent authority. Of most of the apostolical churches the first bishops or pastors were appointed by the apostles; but on

their death the choice of a successor devolved on the members of the society. In this election the people had an equal share with the presbyters and inferior clergy without exception or distinction; and it is clear that their right in this matter was not merely testimonial, but judicial and elective.

The churches thus constituted and regulated formed a sort of federative body of independent religious communities dispersed through the greater part of the empire in continual communication and in constant harmony with each other. It is toward the middle of the second century that the first change is perhaps perceptible. Accordingly, we find the first instances of such assemblies as were of a general character. Their character was essentially popular; the representatives of equal churches elected to their sacred offices by the whole body over which they presided assembled to deliberate as equals. Again, the ecclesiastics who composed them properly appeared there in no other character than as the deputies of their churches, but it may sometimes have happened that on their return home they individually assumed some part of the power which they had possessed collectively; at least it is certain that many notions respecting the exalted and irresistible nature of episcopal authority were already floating about the Christian world, and the bishop was not likely to disclaim the homage which would occasionally be offered to him. But it was not until the habit of acting in bodies made them sensible of their common interest and real power that they ventured to assert such claims, and assumed a loftier manner in the government of their dioceses; so that though these synods were doubtless indispensable to the well-being of Christianity, they seem to have been the means of corrupting the original humility of its ministers; and the method which was intended to promote only the eternal interests of the Church promoted, in some degree, the worldly consideration of the order which governed it. This change began to show itself toward the end of the second century; and it is certain that at this period we find the first complaints of the incipient corruption of the clergy. On the other hand, there can be little doubt that the increased authority and influence of the hierarchy was highly serviceable to the whole body in periods of danger and persecution, and that in those times it was generally exerted to excite the courage and sustain the constancy of the faithful.

Excommunication was the oldest weapon of ecclesiastical authority. Doubtless every society has the right to expel its unworthy members, and this right was of extreme use to the first Christians, as it gave them frequent opportunities of exhibiting to the heathen world the scrupulousness of their moral purity. But afterward we know how dangerous an engine it became when wielded by weak or passionate individuals, and directed by caprice or interest or ambition.

It is probable that the ceremonies of religion had somewhat outstripped their primitive simplicity even before the conclusion of the second century. Some additions were introduced even thus early, out of a spirit of conciliation with the various forms of paganism which were beginning gradually to melt into Christianity; but they were seemingly different in different countries; and it is not easy, or perhaps very important, to detect them with certainty, or to enumerate them with confidence.

The first Christians were unanimous in setting apart the first day of the week, as being that on

which our Saviour rose from the dead, for the solemn celebration of public worship. This pious custom was derived from the example of the church of Jerusalem, on the express appointment of the apostles. On these occasions portions of Scripture were publicly read to the people from the earliest age.

The two most ancient feasts of the Church were in honor of the resurrection of Christ and of the descent of the Holy Spirit. At a period when belief must almost have amounted to knowledge, the first Christians, the companions of the apostles, perhaps the disciples of our Saviour himself, were so seriously and practically earnest in their belief, and so satisfied of the generality of that belief in the truth of those two mighty miracles which have presented, perhaps, the greatest difficulties to the skeptical inquirer of after ages, as to establish their first two festivals in solemn commemoration of them.

We find no mention of any public fast except on the day of the crucifixion. The superstitious multiplication of such acts of mistaken devotion was the work of a later age.

**3. Creeds.**—The first Christians used no written Creed; the Confession of Faith, which was held necessary for salvation, was delivered to children or converts by word of mouth, and entrusted to their memory. Moreover, in the several independent churches, the rule of faith was liable to some slight changes, according to the opinion and discretion of the bishop presiding in each. Hence it arose that when the creeds of those numerous communities came at length to be written and compared together, they were found to contain some variations; this was natural and necessary; but when we add that those variations were for the most part merely verbal, and in no instance involved any question of essential importance, we advance a truth which will seem strange to those who are familiar with the angry disputations of later ages. But the fact is easily accounted for—the earliest pastors of the Church drew their belief from the Scripture itself as delivered to them by writing or preaching, and they were contented to express that belief in the language of Scripture. They were not curious to investigate that which is not clearly revealed, but they adhered firmly and faithfully to that which they knew to be true; therefore their variations were without schism and their differences without acrimony. The creed which was first adopted, and that perhaps in the very earliest age, by the Church of Rome, was that which is now called the apostles' creed, and it was the general opinion, from the fourth century downward, that it was actually the production of those blessed persons, assembled for that purpose; our evidence is not sufficient to establish that fact, and some writers very confidently reject it. But there is reasonable ground for our assurance that the form of faith which we still repeat and inculcate was in use and honor in the very early propagation of our religion.

The sacraments of the primitive Church were two—those of Baptism and the Lord's Supper. The ceremony of immersion (the oldest form of baptism) was performed in the name of the three Persons of the Trinity; it was believed to be attended by the remission of original sin and the entire regeneration of the infant or convert by the passage from the land of bondage into the kingdom of salvation. A great proportion of those baptized in the first ages were, of course, adults, and the Church was then scrupulous to admit none among its members excepting those whose sincere

repentance gave promise of a holy life. In after ages, by an error common in the growth of superstition, the efficacy inherent in the repentance was attributed to the ceremony, and the act which washed away the inherited corruption of nature was supposed to secure a general impunity, even for unrepented offences. But this double delusion gained very little ground during the first two centuries.

The celebration of the sacrament of the Eucharist was originally accompanied by meetings which somewhat partook of a hospitable or at least of a charitable character, and were called Agapæ or Feasts of Love. Every Christian, according to his circumstances, brought to the assembly portions of bread, wine and other things as gifts, as it were, or oblations to the Lord. Of the bread and wine such as was required for the administration of the sacrament was separated from the rest and consecrated by the bishop alone; its distribution was followed by a frugal and serious repast. Undoubtedly those assemblies acted not only as excitements to ardent piety, but also as bonds of strict religious union and mutual devotion during the dark days of terror and persecution. It was probably on those occasions, more than any other, that the sufferers rallied their scattered ranks and encouraged each other, by one solemn act of brotherly communion, to constancy in one faith and association in the same afflictions. We observe, moreover, that as the dangers passed away from the Church, that more social form (if we may so express it) of eucharistical administration gradually fell into disuse.

**4. Morality.**—The morality of the primitive Church is the subject to which we proceed with high confidence and unalloyed satisfaction.

Certainly the character of the first Christians, and we are not without guides who make us acquainted with it, presents to us a singular spectacle of virtue and piety, the more splendid as it was surrounded by very mournful and very general depravity. We cannot read either St. Clement's description of the early condition of the church of Corinth or Origen's panegyric on that of Athens without recognizing a state of society and morality such as all the annals of paganism do not discover to us, and such as its principles could not ever have created. The following lines are a quotation from the former: "You were all humble in spirit, nothing boasting, subject rather than subjecting, giving rather than receiving. Contented with the food of God, and carefully embracing his words, your feelings were expanded and his sufferings were before your eyes, so profound and beautiful the peace that was given to you, and so insatiable the desire of beneficence. Every division, every schism, was detestable to you; you wept over the failings of your neighbors; you thought their defects your own, and were impatient after every good work," etc.

The above passage refers to the Christians of Greece; and there is a sentence in the letter of Pliny to Trajan already quoted, giving still stronger testimony to the virtues of the Asiatics. They bind themselves by an oath not to the commission of any wickedness, but not to be guilty of theft or robbery or adultery, never to falsify their word, nor to deny a pledge committed to them when called upon to return it.

Bardesanes, a learned Christian of Mesopotamia, who lived in the time of Marcus Antoninus, has the following passage, preserved to us by Eusebius. "Neither do Christians in Parthia indulge in polygamy though they be Parthians, nor do they

marry their own daughters in Persia though Persians. Among the Bactrians and the Gauls, they do not commit adultery; but wheresoever they are they rise above the evil laws and customs of the country." This is not only a very powerful, but almost an universal, testimony in favor of Christian morality, and there are some to whom its truth will appear the less questionable because it comes from the pen of a heretic.

The virtue of chastity, which, however it may have been celebrated in the heroic ages of paganism, was certainly little reputed in the East during the more enlightened rule of philosophy, was very rigidly cultivated by the primitive converts. This truth, which is generally attested by the passages above quoted, is made the subject of peculiar exaltation by Justin Martyr. But the continence of the first Christians did not degenerate into any superstitious practice, yet it seems certain that in the ages immediately subsequent the simple principle of the gospel began to be unreasonably exaggerated, and somewhat later the progress of monasticism was forwarded by the exalted value placed on that virtue. So that excess of admiration blinded enthusiasts as to its real nature and character, and led them to invest it with perfections and pretensions which were at variance with the advancement and happiness of human society.

The heathen governments, even the Roman in its highest civilization, tolerated and perhaps encouraged the unnatural practice of exposing infants, who in that condition were left, as it might happen, to perish from cold or starvation, or preserved for the more dreadful fate of public prostitution. This practice was held in deserved detestation by the followers of Christ.

Charity was the corner-stone of the moral edifice of Christianity and its earliest characteristic; and as this is still the virtue by which it is most distinguished, both publicly and privately, from every false religion, so we need not hesitate to avow that this of all its excellences was the most efficient under divine Providence in its original establishment. Every Christian society provided for the maintenance of its poorer members; and when the funds were not sufficient for this purpose, they were aided by the superfluities of more wealthy brethren. The same spirit which "preached the gospel to the poor" extended its provisions to their temporal necessities, and so far from thinking it any reproach to our faith that it first addressed itself by its peculiar virtues as well as precepts to the lower orders of mankind, we derive from this very fact our strongest arguments against those who would persuade us that the patronage of kings was necessary for its establishment; it rather becomes to us matter of pious exultation that its progress was precisely in the opposite direction. By far the majority of the early converts were men of low rank, and their numbers were concealed by their obscurity until they became too powerful to dread persecution. Every step which they took was upward. Until the middle of the second century they could scarcely discover among their thousands one learned man. From the schools they advanced into the senate, and from the senate to the throne; and they had possessed themselves of every other office in society before they attained the highest. It is important to attend to this fact that we may not be misled, it is important to observe that the basis from which the pyramid started up was the faith and constancy of the common people—the spirit of the religion and the earliest government of the Church was popular, and it is in its earliest his-

tory that we find those proofs of general moral purity on which we now dwell with the more pleasure, because in the succeeding pages the picture will never again be presented to us.

We will make one short extract from the writings of a very witty pagan of the second century, which throws great light on the character of the Christians of that age. Lucian, who considered every form of worship as equally an object of ridicule, tells a story of one Peregrinus, who had been expelled from his country, Armenia, for the most horrible crimes; who thence wandered into Palestine, became acquainted with the doctrine of the Christians, and affected to embrace it. Being a man of talents and education, he acquired great influence among their illiterate body; and, in consequence, he soon attracted the notice of the Roman governor, and was thrown into prison for being a Christian. In prison he is represented to have been consoled by the pious charity of the faithful: "There came Christians, deputed from many cities in Asia, to relieve, to encourage and to comfort him, for the care and diligence which the Christians exert on these occasions is incredible—in a word, they spare nothing. They sent, therefore, large sums to Peregrinus, and his confinement was an occasion of amassing great riches; for these poor creatures are firmly persuaded they shall one day enjoy eternal life; therefore they despise death with wonderful courage, and offer themselves voluntarily to punishment. Their first lawgiver has taught them that they are all brethren, when once they have passed over and renounced the gods of the Greeks, and worship that Master of theirs who was crucified, and regulate their manner and conduct by his laws. They despise, therefore, all earthly possessions, and look upon them as common, having received such rules without any certain grounds of faith. Therefore if any juggler or cunning fellow, who knows how to make his advantage of opportunity, happens to get into their society, he immediately grows rich; because it is easy to abuse the simplicity of these silly people." We have no reason to complain of such description from the pen of an adversary; for, on the one hand, it attributes to our ancestors in faith boundless charity, zeal inexhaustible, brotherly love, contempt of death, and of all earthly possessions, and a steady adherence to the faith and precepts of Christ; on the other hand, it lays no charge against them except simplicity, the usual associate of innocence.

From A. D. 200 the progress of religion continued with great rapidity; and we have reason to believe that, before the time of Constantine, it was deeply rooted in all the eastern provinces of the Romans, as well as in the Persian empire. Tillemont (vol. iii, p. 405), on the authority of Origen, asserts that the Christians, before the middle of the second century, not only had built a number of churches, but had ventured in some places an assault upon temples, altars and idols. Gibbon has candidly acknowledged his error in attributing the conversion of Armenia to the reign of that emperor; and perhaps a more impartial reflection on the mission of Pantænus, which we have no reason to believe fruitless, would have led him to doubt his own accuracy when he makes a similar assertion respecting Æthiopia. The light of Christianity had certainly penetrated, with varying splendor, among the Bactrians, the Parthians, the Scythians, Germans, Gauls and Britons; the Goths of Mysia and Thrace were converted by missionaries from Asia, and laid aside, on the reception of the faith, the barbarity of their manners.

While the church of Antioch retained, after the fall of Jerusalem, a nominal supremacy among the Christians of the East, that of Rome continued to advance, among the Western churches, certain vague assertions of authority. On one occasion indeed, in the conviction of a heretical bishop, Paul of Samosata, its claims appear to have been indirectly encouraged by the emperor Aurelian; but they were not then acknowledged by any Christian Church, and were very warmly contested by Cyprian, bishop of Carthage. That prelate maintained with equal zeal and truth the primitive equality of the churches. If the early Christians had for the most part derived the rudiments of their learning from Alexandria, their charitable exertions had been principally animated by the wealth and munificence of Rome. These two cities appear still to have maintained their respective advantages. During the suspension of persecution, in the reign of Commodus, many great and opulent families were converted; and we learn from an epistle of Cornelius, bishop of Rome, that it was among his duties to provide for the maintenance of more than fifteen hundred widows and mourners. The excellences of the religion contributed to its progress, and so rapid at this period was that progress that at the synod assembled at Rome in the year two hundred and fifty-one to pronounce upon the heresy (or schism) of Novatian, sixty bishops and a greater number of presbyters and deacons were present, though the rustic pastors in the other districts held their separate meetings respecting the same question. Under such of the emperors as were not decidedly opposed to Christianity, a considerable number of its professors were to be found in the army and even at the court, since their profession did not exclude them from public preferment; and their assemblage for divine worship, in certain houses set apart for that purpose, was permitted by the connivance of the civil magistrate. The emperors during this age who were most favorable to Christianity were Caracalla, Heliogabalus, Alexander Severus, Gordian and his two successors, the Philips. Respecting the first of these two, a great mass of authorities is adduced to prove that he had actually, though secretly, embraced the religion.

Origen.—The best history of the church of Alexandria during the first half of the third century is furnished by the life of Origen. That extraordinary person, the most eminent among the early Fathers, was a native of Egypt, the son of one Leonidas, who suffered martyrdom in the year 202. When in prison, he received an epistle from his son, of which one sentence only is preserved to us: "Take heed, father, that you do not change your mind for our sake." Origen was then about seventeen years old; his religious instructions he had received from Clemens Alexandrinus, his philosophical lore from Ammonius Saccus, and such proficiency had he made in both these studies that he was called to preside over the catechetical school of Christianity at the age of eighteen. He filled that office for nearly thirty years, and discharged its duties with zeal and genius so distinguished, with such fruitful diligence of composition, such persuasiveness of oral eloquence, as to make it a question whether our religion was ever so much advanced, in point of numbers, by the mere intellectual exertions of any other individual. He merited the honor of persecution, and had the double fortune to be expelled from his chair and country by the jealousy of the bishop Demetrius and to be tortured in his old age by the brutality of a Roman emperor. The

works of Origen exhibit the operation of a bold and comprehensive mind burning with religious warmth, unrestrained by any low prejudices or interests and sincerely bent on the attainment of truth. In the main plan and outline of his course he seized the means best calculated to his object, for his principal labors were directed to the collection of correct copies of the Holy Scriptures, to their strict and faithful translation, to the explanation of their numerous difficulties. In the first two of these objects he was singularly successful; but in the accomplishment of the last part of his noble scheme the heat of his imagination and his attachment to philosophical speculation carried him away into error and absurdity, for he applied to the explanation of the Old Testament the same fanciful method of allegory by which the Platonists were accustomed to veil the fabulous history of their gods. This error, so fascinating to the loose imagination of the East, was rapidly propagated by numerous disciples, and became the foundation of that doubtful system of theology called Philosophical or Scholastic. His school gave birth to a number of learned men—Plutarch, Serenus, Heraclides, Heron—who proved the sincerity and multiplied the followers of their religion by the industry with which they adorned life and the constancy with which they quitted it.

Tertullian.—The Latin Church of Carthage attained little celebrity till the end of the second century, when it was adorned by Tertullian, and we find that about that period Christianity, which had already scattered its blessings along the banks of the Nile and into the adjacent deserts, also made great progress along the northern coast of Africa. Tertullian is described by Jerome as "a man of eager and violent temper;" and he appears to have possessed the usual vice of such a temperament, inconstancy. The same is the character of his writings; they contain some irregular eloquence, much confidence of assertion and a mixture of good with very bad reasoning. He wrote many tracts against heretics, and then adopted the opinions of the least rational of all heretics, the Montanists. But in spite of many imperfections his genius, his zeal and his industry place him at the head of the Latin Fathers of that period. His moral writings must have been eminently serviceable to converts who had been educated with no fixed principles of morality, and his "Apology" is among the most valuable monuments of early Christianity. He appears to have been made a presbyter of the church of Carthage about 192 A. D., at the age of forty-five. His secession from the Church may have taken place seven years afterward, and some of his most valuable works were probably composed during the period of his heresy.

The fame of Tertullian was succeeded in the same Church, but not surpassed, by that of Cyprian, an African and a heathen, who was converted to Christianity late in life, and presently raised to the see of Carthage about the year 250. It is said that he was exalted to that dangerous honor rather by the popular voice of the Church than by his own inclination. It is certain that, after a very short and disturbed possession of it, he suffered martyrdom with great fortitude in the reign of Valerian. An interesting and probably faithful account of his sufferings will be found in a later page.

Government.—The government of the Church at the beginning of the third century was nearly such as we have already described. The more important churches were severally superintended by a

bishop, possessed of a certain, but not very definite, degree of authority, who ruled in concert with the body of presbyters, and even consulted on matters of great moment the opinion of the whole assembly. The provincial synods, of which we have spoken, composed of these bishops, assisted by a few presbyters, now began to meet with great regularity and to publish canons for the general ordination of ecclesiastical affairs. The metropolitans gradually rose in consequence. Their dignity seems to have been conferred for life, but their legitimate power was confined to the calling and presiding in councils and the fraternal admonition of offenders. Still, it was the natural consequence of this system, acting on human imperfection, that the occasional presidents insensibly asserted a general pre-eminence over the other bishops, which it became their next step to dispute with each other, and that the other bishops, being now constantly distinguished from their presbyters by these synodical meetings, assumed both over them and the people a degree of ascendancy not originally acknowledged, but which it was not difficult gradually to convert into authority. If we are to bestow on any individual the credit of having accomplished a change so natural and so nearly insensible, that distinction may possibly be due to Cyprian; certain it is that he pleaded for episcopal supremacy with much more zeal and vehemence than had hitherto been employed in that cause. It seems clear, indeed, from several of his epistles, especially that addressed to Rogatian, that bishops possessed in his time, or at least in his Church, the power of suspending or deposing delinquents among the clergy. Yet even this was liable to some indefinite restrictions as to circumstance and custom, and to a direct appeal to a provincial council. And it does not appear that such power was frequently exerted without the consent of the presbyterial college or "senate of the Church." From these facts, compared with the assertions afterward made by St. Jerome and St. Chrysostom, which we have already mentioned, we infer that the actual progress of episcopal usurpation during the third century was much less than some have imagined, or at least that the power of the bishops grew chiefly through the growth of their influence, and was not yet publicly acknowledged by the constitution of the Church.

We admit, however, with sorrowful reflection, that the individual conduct of some, perhaps many, among the directors of the Church during the course, and especially the conclusion of this century, deserved the reprehensions of contemporary and succeeding writers. Some assumption of the ensigns of temporal dignity—the splendid throne, the sumptuous garments, the parade of external pomp—indicated a departure from apostolical simplicity, and a contentious ambition succeeded to the devoted humility of former days. And though we believe this evil to have been exaggerated by all the writers who have dwelt upon it, since the abuses which we have noticed could scarcely be carried to violent excess by an order possessing no legally recognized rights or property, we may still be convinced by the institution of certain inferior classes in the ministry, such as subdeacons, acolythi, readers, exorcists and others, that the higher ranks had made some advances in luxurious indolence.

Catechumens.—This deterioration in the character of the ministers was attended by a corresponding change in the ceremonies of the Church. The division of the people into two classes, the Faithful and the Catechumens, was the practice, if not

the invention, of the third century. It was borrowed from the pagan principle of initiation; and the outward distinction between these classes was this, that after the performance of public worship the latter were dismissed, while the former, the true and initiated Christians, remained to celebrate the mysteries of their religion; and this term is by some thought to have expressed not only the administration of the sacraments, but the delivery of some doctrinal instructions. The original simplicity of the office of baptism had already undergone some corruption. The symbol had been gradually exalted at the expense of the thing signified, and the spirit of the ceremony was beginning to be lost in its form. Hence a belief was gaining ground among the converts, and was inculcated among the heathen, that the act of baptism gave remission of all sins committed previously to it. It was not fit, then, that so important a rite should be hastily performed or inconsiderately received; and, therefore, the new proselytes were, in the first instance, admitted into a probationary state under the name of catechumens, whence they were chosen, according to their progress in grace, into the body of the faithful. As long as they remained in that class great care was taken to instruct them in the important truths and especially in the moral obligations of religion, yet doubtless there would be some among them in whom the love of sin survived the practice of superstition, and such would naturally defer their baptism and their pardon until the fear of death or satiety of enjoyment overtook them. It is true that baptism was not supposed to bestow any impunity for future sins; on the contrary, the first offence committed after it required the expiation of a public confession, and the second was punished by excommunication. But if the hope and easy condition of pardon for the past tended, as it may have done, to fill the ranks of the catechumens, we may reasonably indulge the belief that the great majority were amended and perfected by the religious instruction which was then opened to them.

About the same time and from causes connected with this misapprehension of the real nature of baptism and the division of the converts a vague and mysterious veneration began to attach itself to the other sacrament; its nature and merits were exaggerated by those who administered and partook of it, it was regarded with superstitious curiosity by those to whom it was refused, and reports were already propagated of the miraculous efficacy of the consecrated elements.

An opinion at this time became prevalent in the Christian world that the demons, the enemies of man, were in fact the same beings whom the heathen worshipped as gods, who inhabited their temples and animated their statues. It became, therefore, the duty of the soldiers of Christ to assail them under every form and expel them from every residence. That, indeed, which they are related most frequently to have occupied was the body of man, and from this refuge they were perseveringly disturbed by the pious exorcisms of the clergy; and this practice was carried to such superstitious excess that none were admitted to the ordinance of baptism until they had been solemnly delivered from the dominion of the prince of darkness. The sign of the cross, which was already in much honor in the time of Tertullian, was held to be of great effect in the expulsion of demons and in other miracles. We also find that the use of prayers for the dead obtained very general prevalence during this age.

Philosophy.—A dispute had divided the Church during the second century as to the propriety of adopting in its contests with the heathen the weapons of philosophy, and it was finally decided by the authority of Origen and the superior loquacity of the philosophical party. By this condescension the Christians gained great advantages in the display of argument, in subtlety of investigation, in plausibility of conclusion, in the abuse and even in the use of reason; but they lost that manly and simple integrity of disputation which well became, in spite of its occasional rusticity, the defender of truth. It is to this alliance that some are disposed to trace the birth of those pious frauds which cover the face of ecclesiastical history. The original source of this evil was at least free from any stain or shame. It had long been a practice among ancient philosophical writers to ascribe their works to some name of undisputed authority, in order to secure attention to their opinions, though the opinions were well known to be only those of the writer, but the consequences which flowed from it have infected the Church of Christ with some of its deepest and most dangerous pollutions. Books written in later ages were zealously circulated as the writings of the apostles or of the apostolical Fathers. The works of these last were altered or interpolated, according to the notions of after times or the caprices of the interpolator, but usually for the purpose of proving the antiquity of some new opinion, some innovation in discipline, some usurpation in authority. The practice was justified by the detestable but popular principle "that truth may be defended by falsehood;" it was encouraged by the difficulties of detection in ignorant ages, and it continued for more than six centuries to disgrace the Roman Church. It was the same principle, pushed a little farther, which has stained the writings of so many among the early Fathers with statements at least doubtful, if not with palpable falsehood. But, on the other hand, we should ever recollect that Christianity in those days was chiefly in the hands of Greeks and Africans, men of subtle intellects and violent passions, whose habits and whose climate too often carried them into the extreme either of metaphysical sophistry or wild enthusiasm—men who could speculate on their faith or who could die for it, but who were little calculated for the tranquil equanimity of sober and reasonable belief. It is certainly very remarkable that for the first three centuries Rome produced no ecclesiastical writer of any merit, excepting Clement, and the western provinces not one of any description; Rome was very nearly as barren during the three which followed. We should recollect also that some of our best and commonest principles of action were then unknown or partially received, and that, in fact, many of them are the result of the patient operation of Christianity on the human character through a long succession of ages. We shall never do justice to the history of our religion unless we continually bear in mind the low condition of society and morals existing among the people to whom it was first delivered.

During the concluding part of the second century, a philosophical sect arose at Alexandria who professed to form their own tenets by selecting and reconciling what was reasonable in the tenets of all others, and rejecting what was contrary to reason; they were called New Platonists or Eclectics. What they professed respecting philosophy they easily extended to religion, since with them religion was entirely founded on philosophical principles. It is strange that the great

founder of this sect, Ammonius Saccas, had been educated in Christianity; and he seems never to have abandoned the name of the faith, while he was disparaging its doctrines and its essence. A sect which was founded on the seductive principle of universal concord soon made extraordinary progress. In his eminent disciple Plotinus, Ammonius left a successor not inferior to himself in subtlety of genius and power of profound and abstruse investigation; and next to Plotinus in age and reputation is the celebrated name of Porphyry. The efforts of these philosophers were for the most part directed against Christianity, and the contest was waged with great ardor during the third century. But as Origen and his scholars, on the one hand, adopted into the service of religion some of the peculiar principles of their adversaries, so, on the other, certain disciples of Plotinus assumed the name and professed the faith of Christians, at the same time that they retained some favorite opinions of their master—an accession which was only valuable in so far as it swelled the body and increased the lustre of the Church. To give some idea of the nature of Christian literature in this age, it may be worth while to mention the subjects of some of the most celebrated productions: *On Temptations, The Baptism of Heretics, Promises, Chastity, The Creation, The Origin of Evil, The Vanity of Idols, The Dress of Virgins, The Unity of the Church, Circumcision, Clean and Unclean Animals, The Lapsed, or those who had Fallen from the Faith during Persecution, The Millennium*, besides numerous books against heretics.

*Millennium*.—It has been too hastily asserted by some historians, and too readily admitted by others, that the expectation of the millennium, or presence of Christ on earth to reign with his elect, was the universal opinion of the ancient Church. The fair statement of that much disputed question appears to be this: Eusebius informs us that Papias, "among certain parables and sermons of the Saviour, and other seemingly fabulous records which he professed to have received traditionally, said that there would be a thousand years after the resurrection of the dead during which Christ was to reign bodily upon the earth, in which I think that he misunderstood the apostolic narrations, not penetrating what was mystically spoken by them, for he appears to have been exceedingly limited in understanding, as one may conjecture from his discourses." The historian then proceeds to attribute the general reception of this opinion among ecclesiastics, and particularly by Irenæus, to their respect for "the antiquity of the man." To Papias, then, we may attribute the origin of the belief. It was first adopted by Justin Martyr, next by Irenæus, and connected by both of them with the resurrection of the flesh. But the passage of the latter plainly declares "that there were some in the Church, in divers nations and by various works, who, believing, do consent with the just, who do yet endeavor to turn these things into metaphors," which proves that even the orthodox were divided on the question at that early age, though the names of the disputants have not reached us. The first distinguished opponent of the doctrine was Origen, who attacked it with great earnestness and ingenuity, and seems, in spite of some opposition, to have thrown it into general discredit; and probably we shall not have occasion to notice the opinion again until we arrive at the tenth century.

Dr. Whitby expresses his belief that the Fathers who adopted that doctrine "received it from the

traditions and notions of the Jews;" and he proceeds very truly to assert that that error "will not invalidate their authority in anything delivered by them as witnesses of what they have seen, or declared to have been then the practice of the Church of Christ." In these points, indeed, consists a great portion of the direct value of their works. But they are also greatly, perhaps principally, useful to us, as they prove by numerous quotations the early existence of the books of the New Testament as we now read them, and their reception in the primitive Church.

#### Persecution by several Roman Emperors.

The religion called polytheism means "the worship of many gods." Now, the observation which first occurs to us is this, that when the number of gods is not limited the easy reception of an additional divinity does little more than satisfy the definition of the word; it is not the endurance of a new religion, but the slight extension of that already established. The intrusion of one stranger would scarcely be noticed in the numerous synod of Mount Olympus; the golden portals were ever open—useful virtue or splendid vice gave an equal claim to admission; and the policy or servility of Rome bowed with the same pliancy to the captive gods of her enemies or the manes of her imperial tyrants. This was not a virtue, but a part of polytheism; the new deities became new members of the same monstrous body, they assisted and sustained each other, and the whole mass was held together by ignorance and animated by the gross spirit of superstition. It seems, indeed, that a pagan statesman who may have permitted additions to the calendar of his gods deserves no higher description of praise than that which we should bestow on a pope who has been zealous in the canonization of saints. For one idol will presently become as holy as another idol; nor could there be any reason why Jove should scorn the society of Serapis, since their respective divinity was founded on the same evidence, and their worship conducted on the same principles.

Such is the real theory of pure polytheism. But we should be doing it much more than justice if we were to confine ourselves to its abstract nature, without mention of the political uses to which it was converted by statesmen.

They supported religion only as one of the easiest means of governing, and valued devotion to the gods as they supposed it naturally connected with obedience to man—a just supposition in a case where the gods were little removed from the nature and generally tainted with the vices of humanity. Our short inquiry into the manner in which the ancients wielded this engine of state shall be confined to the history of Rome, as being immediately connected with the subject of the present chapter.

Cicero gives us the following extract from the most ancient laws of Rome: "Let no one have any separate worship, nor hold any new gods; neither to strange gods, unless they have been publicly adopted, let any private worship be offered; men should attend the temples erected by their ancestors," etc. From Livy we learn that about four hundred and thirty years before Christ orders were given to the aediles to see that "none except Roman gods were worshipped, nor in any other than the established forms." Somewhat more than two hundred years after this edict, to crush certain external rites which were becoming com-

mon in the city, the following edict was published, "that whoever possesses books of oracles, or prayer, or any written act of sacrifice, deliver all such books and writings to the praetor before the calends of April, and that no one sacrifice on public or sacred ground after new or foreign rites." But it may seem needless to produce separate instances, when from the same historian we learn that it had been customary in all the early ages of the republic to empower the magistrates "to prevent all foreign worship, to expel its ministers from the forum, the circus and the city, to search for and burn the religious books, and to abolish every form of sacrifice except the national and established form."

The authority of Livy is confirmed by that of Valerius Maximus, who wrote under the emperor Tiberius, and bears testimony to the jealousy with which all foreign religions were prohibited by the Roman republic. That the same principle which had been consecrated by the practice of seven hundred years was not discontinued by the emperors is clearly attested by the historian Dio Cassius. It appears that Maecenas in the most earnest terms exhorted Augustus "to hate and punish" all foreign religions, and to compel all men to conform to the national worship; and we are assured that the scheme of government thus proposed was pursued by Augustus and adopted by his successors.

Now, from the first of the passages before us it appears that all right of private judgment in matters of religion was explicitly forbidden by an original law of Rome which never was repealed. We know not what stronger proof it would be possible to adduce of the inherent intolerance of Roman polytheism. The next four references prove to us that the ancient law, subversive of the most obvious right of human nature, was strictly acted upon during the long continuance of the commonwealth. The established form of paganism might not be violated by individual schism or dissent; the gods whom the government created the people were compelled to worship according to the forms imposed by the government. Under the early emperors the same was still the maxim of state; and if the influx of idolaters from every nation under heaven made it difficult to preserve the purity of the Roman religion, that religion became more domestic and (let us add) more Roman by the successive and easy deification of some of the most vicious of mankind.

Now, Christianity was distinguished on its first publication as the religion of mankind. It did not adapt itself to individual nations, but to men as men, and on this account founded a community which exalted itself above national prejudices, and united all, whether Greeks or Romans, as children of God. By means of this universalism, the Church from its commencement regarded herself as an independent organization. Without regard to the governments of the nations, she adopted her own form of constitution, and soon extended her influence as a well-ordered system of society through the whole Roman empire. At first she was despised and disregarded as a Jewish sect; but this view changed when by her outspreading influence among the heathen her universal tendency became more sensibly felt. For Rome was threatened in her own religion, and an attack on heathenism was regarded as one on herself. Thus originated that fierce struggle between the Christian Church and the Roman State that led to the persecution of the first three centuries.

It was a contest for life and death; for as the existence of the Church depended on a legitimate toleration, so that of the State would be endangered by the loss of the moral restraint which religion maintained. At first it was a religious struggle, the question being whether the State should remain heathen or become Christian. But there was a further question, viz., the separation of the political and the religious elements; for if the State acknowledged the Church, it must bow before an encroaching community, it must part with authority in one of two departments in which it had reigned supreme, and the emperors therefore hated the Church and attempted to eradicate a system which so directly and so determinedly opposed the imperial power. The Church maintained only a passive position during this struggle, but every fresh trouble only displayed her power even when suffering. Accordingly, effort after effort even of the most ruthless and sanguinary character proved abortive, and in the Diocletian persecution, the most violent of all, Constantine came to the conclusion that the ancient "sacred rites" were no longer to be saved, and the State could only be preserved by taking refuge in the new faith. He therefore acknowledged the Church, characteristically enough, not from religious, but political, grounds; it was the State which in Constantine surrendered itself to the Church.

Early, though not the most ancient, ecclesiastical historians, followed by many moderns, have fixed the number of persecutions at ten; and if we thought proper indiscriminately to designate by that name every partial outrage to which Christians were subjected from the reign of Nero to that of Constantine, perhaps even this number might be considerably extended. The number of ten persecutions was an invention of the fifth century, derived from arbitrary interpretations of prophecy rather than historical evidence. Laetantius, in the fourth age, enumerates only six. Eusebius specifies no number, though he appears to mention nine. The same number is adopted by Sulpicius Severus in the fifth century, who prepares his readers, however, for the infliction of the tenth and last by Antichrist at the end of the world; from this time ten became the popular computation. Gibbon has so carefully palliated the guilt and softened down the asperity of these successive inflictions that in his representation not one of them wears a serious aspect, excepting that of Diocletian, though he admits that some transient excesses may be charged upon Nero, Domitian, Decius and perhaps one or two others.

*Nero*.—The persecution of Nero was the first to which the Christian name was subjected, and the best account which has reached us respecting it is that of the historian Tacitus, which we have translated in a former chapter. From his description it appears that the sufferings of the Christians did not originate in any evil that had been committed by them, nor even in the general calumnies which blackened their character, but in a specific charge, which was notoriously false, that they had occasioned the destructive conflagration so generally attributed to the madness of the emperor himself. The nature of their tortures is related and the very spots particularized on which they were inflicted, but their duration is not mentioned, nor the extent to which the persecution prevailed (if it at all prevailed) in other parts of the empire. The fact that it arose in the first instance from a charge which was necessarily confined to the inhabitants of Rome is certainly not a conclusive

argument that it might not afterward spread beyond the boundaries of the city; and yet both the words and the silence of Tacitus are such as indirectly persuade us that the calamity which he is describing was both local and transient. The imperfect account of Eusebius throws little more light on these questions, which have in vain divided the opinions and exercised the ingenuity of a multitude of critics. For our own part, if that were sufficiently proved which is continually asserted, that the persecution lasted for four years, until the death of Nero, we should very readily admit the probability that it was general; but whatever uncertainty may rest on this point, the expressions of the pagan historian unhapplily convey sufficient evidence that the assault was exceedingly destructive and attended by every circumstance of barbarity.

*Domitian*.—After this first affliction the Christians passed about thirty years in the silent and undisturbed propagation of their religion. In the year 94 or 95 they again attracted the attention of the civil power by exciting, as it would seem, the political fears of the emperor. Domitian was no doubt acquainted with an ancient prophecy prevalent throughout the East, and probably an imperfect adumbration of the prophecies of the Old Testament, that the imperial sceptre was destined one day to pass into the hands of a Jew. This led to some inquiries into the actual condition of the royal family of Jerusalem, and the grandsons of St. Jude, the apostle, the brother of the Saviour, are said to have been brought before the throne of the tyrant; but his jealousy was disarmed by their poverty and simplicity; their hands were hardened with daily labor, and their whole property consisted in one small farm of about twenty-four acres. And when the emperor inquired respecting the nature of their prophetic hopes and the character of the monarch who was to rise up from among them, he was informed "that his kingdom was not of earth, but heavenly and angelical, and that in the completion of time he would come in glory to judge both the living and the dead, according to their merits." They were dismissed without injury; and soon after this event some severities which had lately been exercised against the Christians were suspended by the prudence or the death of the emperor.

*Trajan*.—The celebrated epistle of Pliny to Trajan was written ten or twelve years afterward, and proves that the Christians in Bithynia (and probably in every province of the East) were subjected to many vexations and sufferings. The emperor's answer amounted to this: "That the Christians are not to be sought for, nor molested on anonymous information, but that on conviction they ought to be punished." From a comparison of these two documents we collect, first, that the spirit of persecution in this instance originated rather in their heathen fellow-subjects than in the character of the emperor; and, secondly, that the laws by which they were punished were not any recent edicts issued by an express act of legislation against Christians, but the original statutes of the republic continued and applied to them. The object of Trajan, in this rescript, was their mitigation; it is probable that he knew little respecting the nature and evidence of the new religion, but was desirous somewhat to soften the practical intolerance of his own; but the effect was not in the end favorable to the Christians, since it gave a sanction to legal persecution and established on high authority the fatal maxim that the mere profession of Christianity was a criminal offence.

The truth of the first of the above conclusions is confirmed by the annals of succeeding reigns. About the year 120, Serenus Granianus, proconsul of Asia, wrote to Adrian "that it seemed to him unreasonable that Christians should be put to death merely to gratify the clamors of the people, without trial and without any crime proved against them." And there is a rescript of the emperor, addressed to Minucius Fundanus, in which this letter is noticed, and in which it is enjoined that Christians should not be sacrificed to the clamors of the multitude.

During the long reign of Antoninus Pius (from 138 to 161 A. D.) no deliberate injuries were inflicted upon the Christians, and it appears that they suffered much more from the violence of popular tumult than from the operation of the ancient laws. It became common about this time to attribute national calamities of every description to the contempt of the national religion exhibited by the Christians. "If the Tiber has overflowed its banks" (exclaimed Tertullian in the next generation), "or the Nile has not overflowed; if heaven has refused its rain; if the earth has been shaken; if famine or plague has spread its ravages, the cry is immediately raised, 'Away with the Christians to the lions!'" The emperor, influenced, as some have supposed, by the Apologies of Justin Martyr, published one, possibly two, edicts for their protection against such outrage; and during this reign especially they grew and extended in dignity as well as number, and became more generally known by writings not devoid of energy and eloquence. Pius was succeeded by Marcus, of whom Gibbon has said that "during the whole course of his reign he despised the Christians as a philosopher, and punished them as a sovereign."

*Marcus Antoninus*.—It seems singular that a historian who makes great profession of candor and universal humanity should almost have excepted from the number of persecutors the only name (as far at least as this part of our inquiry) to which that ignominious designation appears justly and certainly to belong; for under all the preceding emperors the injuries inflicted upon the Christians had either been occasional, as arising from some casual circumstance, or staining only a portion of their reign; or partial, as confined to a few provinces or perhaps cities of the empire. Moreover, they had been sometimes excited, and generally encouraged, by popular irritation; they had been directed against a small and obscure and calumniated sect, through the operation and according to the seeming intention of the ancient statutes. On the other hand, Marcus Antoninus undertook the task of "punishment" or persecution among the earliest of his imperial duties, and he continued to fulfill it with unremitting diligence throughout the nineteen years of his splendid administration. He acted on deliberate principles, and his principles were not of partial or local operation, but were equally applicable to every province of his empire. And thus he everywhere enforced the laws in their full severity: the lives and the property of the convicted were forfeited by the most summary process of justice; and the search which was made after the suspected, and which the unimpaired humanity of Trajan had so nobly discouraged, sufficiently proves the activity of the pursuit and the earnestness of the pursuer. But the most important point of distinction is probably this; Marcus Antoninus knew much better the nature of the evil which he was committing; he was acquainted, to a certain extent at least, with the

opinions of the Christians and the innocence of their character; and it is not likely that he had entirely neglected to examine the grounds of their faith. He watched the process of his own inflections; and when he perceived the fortitude with which all endured and the eagerness with which many courted them, he coldly reproved the unphilosophic enthusiasm of the martyrs.

In our natural anxiety to honor every form of human excellence, we search for his excuse in the religious policy so long established in the empire. But we find that those of his predecessors who were disposed to soften or suspend its operations upon Christians possessed the power to do so; and we cannot doubt that the despotic authority of Marcus would have enabled him to revise or repeal their oppressive statutes if he had learnt from the books of his philosophers the virtue or the meaning of toleration. This, indeed, is the real and only ground of his defence, and we shall regard his conduct with less indignation if we reflect how feeble were the mightiest principles of conduct with which he was acquainted; on what a loose and shifting foundation they rested; how large was the class of virtues which they did not comprehend; and how imperfect were the motives which they proposed for the practice of any. And thus considered, we shall discover, perhaps, some trace of heavenly providence in the circumstance that the imperial philosopher, flourishing in the maturity of his science, and deficient in nothing which nature or man could bestow, was armed with the highest temporal authority and permitted to direct it against the infancy of our faith. From the splendid imperfection of Marcus Antoninus, from the perseverance of his powerful enmity, from its final failure, we may learn what narrow limits have been assigned to the virtue and wisdom and power of unassisted man, and we derive a new motive of gratitude for that heavenly aid which has fixed our social happiness on a certain and eternal foundation.

The greatest prince of antiquity was succeeded by a son who neither inherited his virtues nor imitated his crime; so far from this that we might almost imagine it to have been the object of Commodus to redeem his numerous vices by his humanity toward the Christian name.

Severus ascended the throne in the year 193, and is represented by Tertullian to have bestowed testimonies of approbation on several distinguished Christians, and openly to have withstood the popular fury which assailed the sect. But this account will apply only to the earlier part of his reign; for in the year 202 (about the time of the publication of Tertullian's Apology) he issued an edict which indirectly occasioned a variety of inflictions, the most barbarous of which appear to have been perpetrated in Egypt. The professed object of that edict was only to prevent conversion either to Judaism or Christianity, for the fears of the emperor began to be awakened by the extraordinary progress of the latter. Its effect was to oppress and torture the most zealous ministers of the faith, and to inflame the prejudices of the people against all believers. This enactment continued in force for about nine years, until the death of Severus; and from that period, if indeed we except the injuries inflicted by Maximin (from 235 to 238 A. D.), and directed chiefly against the instructors and rulers of the churches, the Christians, though occasionally liable to popular outrage, had not much reason to complain of the injustice of the government until the accession of Decius, in the year 249.

*Decius.*—Decius, like Marcus Antoninus, is also

ranked, and justly ranked, among the most virtuous of the emperors. The virtues of a pagan were usually connected with his philosophy, and his philosophy taught him to despise every form of worship. Perhaps, too, an imperial eye might view with natural distrust the free and independent principles of Christianity, which were now spreading into more general operation and notice—principles which acknowledged an authority superior to the throne of man; and though they devoted the body to Caesar, yet set apart the soul for God. It would be observed, too, with some jealousy, that the progress of that worship was rapid and universal, in spite of ancient law, popular opposition and imperial edict. Its truth was seldom investigated, because it was not yet sufficiently distinguished from surrounding superstitions which laid no claim to truth, nor even professed to rest on any evidences; and thus the prejudices of the schools at once assumed that the worship of Christ was no better founded than those of Jove and Serapis.

We need not particularize the numerous points of advantage which both branches of the Christian system possess over the corresponding departments of paganism. But the distinctions chiefly to be remarked are that the religion demanded no belief, proposed no creed, inculcated no faith, but was, in fact, identified with its ceremonies, procession and sacrifice, and that the philosophy which undertook the whole charge of morals in vain proposed an elaborate series of barren rules and lifeless exhortations, since it possessed no substantial motive whereby to enforce them. When we reflect how essential are these distinctions, we shall see reason sufficient for the jealousy with which Christianity was assailed both by the one and the other. But their incongruity and incoherence with each other formed the most striking and hopeless deformity of the system; for philosophy lived in open warfare with her senseless associate, and employed a great portion of her diligence and her wit in exposing the multiform absurdities of polytheism.

The persecution of Decius proceeded on a broader principle than that of Severus, as it pretended no less than to constrain all subjects of the empire to return to the religion of their ancestors; it was also strictly universal, as neither confined to particular provinces nor classes, but extending from the lowest confessors to the highest authorities of the Church. Several were consigned to exile or death: Fabienus, bishop of Rome, Alexander of Jerusalem, Babylas of Antioch were among the latter; and the celebrated Origen was subjected to imprisonment and torture. At Alexandria, in the year preceding the accession of Decius, some Christians had been massacred by the hatred or the avarice of the pagan mob; and as such fatal outrages, in addition to authorized injustice, were rather tolerated than promptly repressed by the government which succeeded that sanguinary reign, it was much more calamitous to the faith than its short duration of three years would lead us to apprehend. Indeed, the unusual number of those who fell away from their profession in the hour of trial, by which this persecution is distinguished from those preceding it, is a sufficient proof of its intolerable barbarity.

*Valerian.*—We pass over the comparatively lenient inflictions of Gallus and Volusianus; but the sceptre of Valerian was more darkly stained by the blood of Cyprian, bishop of Carthage, a man of learning and eloquence and piety, whose blameless life and final calmness and constancy have es-

caped the censure and almost the sarcasm of history. It will be instructive as well as interesting to transcribe the simple narrative of his martyrdom.

On the 15th of September, 258, an officer with soldiers was sent to Cyprian's gardens by the proconsul to bring him into his presence. Cyprian then knew his end was near; and with a ready and constant mind and cheerful countenance he went without delay to Sexti, a place about six miles from Carthage, where the proconsul resided. Cyprian's cause was deferred for that day. He was therefore ordered to the house of an officer, where he was detained for the night, but was well accommodated, and his friends had free access to him. The news of this having been brought to Carthage, a great number of people of all sorts, and the Christians in general, flocked thence to Sexti; and Cyprian's people lay all night before the door of the officer, thus keeping, as Pontius expressed it, the vigil of their bishop's passion.

On the next morning, the 14th of September, he was led to the proconsul's palace, surrounded by a mixed multitude of people and a strong guard of soldiers. After some time the proconsul came out into the hall, and Cyprian being placed before him, he said, "Art thou Thascius Cyprian?" Cyprian the bishop answered, "I am." Galerius Maximus the proconsul said, "The most sacred emperors have commanded thee to sacrifice." Cyprian the bishop answered, "I do not sacrifice." Galerius Maximus said, "Be well advised." Cyprian the bishop answered, "Do as thou art commanded; in so just a cause thou needest no consultation." The proconsul, having advised with his council, spoke to Cyprian in angry terms as being an enemy to the gods and a seducer of the people, and then read his sentence from a tablet, "It is decreed that Thascius Cyprian be beheaded." Cyprian the bishop said, "God be praised;" and the crowd of his brethren exclaimed, "Let us too be beheaded with him."

This is the account given in the acts of Cyprian's passion, and that of Pontius is to the same purpose.

*Diocletian.*—For nearly fifty years after this outrage, the peace and progress of religion were not seriously interrupted. The earliest portion even of the reign of Diocletian was favorable to its security, and it was through the weakness of that prince, rather than his wickedness, that his name is now inscribed on the tablets of infamy as the most savage among our persecutors. Two circumstances may be mentioned as having engaged his tardy consent to the commencement of a plan into which he appears to have entered with the most considerate calmness. The influence of the Cæsar, Galerius, who was animated, from whatsoever motive, by an unmitigated detestation of the worshippers of Christ, and who thirsted for their destruction, was probably the most powerful of these circumstances. But the second must not be forgotten. In the disputes, now become general, between the Christian ministers and the pagan priests, the teachers of philosophy are almost invariably found on the side of the latter; and as it is not denied—not even by Gibbon—that these learned persons directed the course and suggested the means of persecution, we need not hesitate to attribute a considerable share in the guilt of its origin to their pernicious eloquence.

Diocletian published his first edict in the February of three hundred and three. Three others of greater severity succeeded it; and during a shameful period of ten years, they were very generally and rigorously enforced by himself, his col-

leagues and successors. It is needless to particularize the degrees of barbarity by which those edicts were severally distinguished; the substance of the whole series is this: The sacred books of the Christians were sought for and burnt; death was the punishment of all who assembled secretly for religious worship; imprisonment, slavery and infamy were inflicted on the dignitaries and presidents of the churches; every art and method was enjoined for the conversion of the believers, and among these methods were various descriptions of torture, some of them fatal. During the preceding ninety years the Church had availed itself of the consent or connivance of the civil government to erect numerous religious edifices and to purchase some landed property; these buildings were now demolished, and the property underwent the usual process of confiscation. A more degrading but less effectual measure attended these; Christians were excluded from all public honors and offices, and even removed without the pale of the laws and the protection of justice; liable to all accusations, and inviting them by their adversity, they were deprived of every form of legal redress. Such were the penalties contained in these edicts; and though it be true that in some of the western provinces of the empire, as in Gaul and perhaps Britain, their asperity was somewhat softened by the character and influence of the Cæsar, Constantine, we are not allowed to believe that their execution even there was generally neglected, and we have too much reason to be assured that it was conducted with very subservient zeal throughout the rest of the empire. In process of time the sufferings of the Christians were partially alleviated by the victories of Constantine; but they did not finally terminate till his accession.

*Accession of Constantine.*—That event, which took place in the year three hundred and thirteen, and which marks the first grand epoch in ecclesiastical history, ended at the same time both the fears and the sufferings of the followers of Christ, and established his worship as the acknowledged religion of the Roman empire.

As the account here given of the persecutions of the early Christians differs in some respects from the views usually taken of this important portion of our history, it may be proper to close this chapter with a few additional remarks.

*Unpopularity of Christians.*—1st. Contemporary evidence obliges us to admit that the Christian name was for many years (so late at least as the reign of Decius) an object of decided aversion to many of those who did not profess it, whether of the learned who scorned the origin, were ignorant of the principles and feared the progress of the new religion, or of the vulgar, who believed the calumnies so industriously propagated against its professors. Hence proceeded those popular tumults which, during the first two centuries (if we except from them the reign of Marcus Antoninus), may have destroyed as many victims as the deliberate policy of the emperors, or the established system of religious government. Still, it must appear singular that a body of persons, distinguished by the moral qualities which are almost universally attributed to the first Christians, should have incurred the hatred of their fellow-subjects rather than the admiration, or at least the sympathy, which was claimed by the character of their virtues. There are several reasons by which we may account for this strange circumstance. The prejudices and passions of mankind were opposed to the new religion; it contradicted their received ways of worship, the dictates and practices of their

forefathers, their own indulged lusts and evil habits. Even the fame and semblance of peculiar sanctity are ever objects of bitter jealousy to those who are incapable of its practice, and who consequently dispute its reality. Again, when it was observed that Christians were not contented with mere inactive profession, but were animated with industrious zeal for the extension of their faith, a disposition to suspect and resist it, as it were in self-defence, was excited among many; and those who might have tolerated an indifferent or merely speculative superstition armed themselves against the active and converting spirit of Christianity. Another, perhaps the most effective, and certainly the original, cause of that aversion, was the persevering hostility of the Jews to the name of Christ. In some of the more populous and commercial cities, the Jews formed no inconsiderable portion of the inhabitants, and they were scattered in smaller numbers over the whole face of the East. The destruction of their capital increased the crowd of exiles and inflamed the angry spirit by which they were animated. It is true that, in their attempts at open outrage, they were sometimes restrained by the civil power; but they were more successful in their secret endeavors to excite against the rising sect the contempt or malice of the heathen. To their malignity we may probably attribute those monstrous calumnies which tainted the Christian name at the very period when its professors were farthest removed from corruption. It was rumored and believed that the religious meetings of the faithful were polluted by alternate excesses of superstition and debauchery; the mysteries especially were invested with the most revolting character; the Eucharist was said to be celebrated by the sacrifice of an infant; and the Feast of Charity was represented to be a revel of cannibals. These stories contained nothing incredible to a pagan, whom the external piety of the new religionists rendered still more suspicious of their private conversation. Without difficulty he believed in the perpetration of rites which bore some resemblance to the darker parts of his own superstition; and his belief was followed by insult and outrage.

The notorious malevolence of the Jews did not prevent the prevalence of another very early and very injurious opinion respecting Christianity—that it was merely a form, and a rejected form, of Judaism. This was a natural error, since the religion proceeded from Judæa, and many among its original preachers, and all its most active enemies, were Jews; it was indeed gradually though slowly removed by the writings of the early Fathers, and the progress of the faith; but the prejudice arising from it was the chief cause of that contempt with which the worship was regarded for above one hundred years, both by philosophers and statesmen.

Again, in the scenes of public festivity, in the temples and at the sacrifices of the gods, the Christian was never present; he partook not in triumphs and rejoicings of which religion formed any portion, and appeared not at the sports of the amphitheatre, except as a victim. This seclusion from the amusements of his fellow-countrymen was mistaken for indifference to the happiness and interests of his country; it was mistaken for disaffection to the government, for moroseness or misanthropy; its real motive was never estimated or even conceived, for the careless temper of polytheism was unable to comprehend an exclusive religion or to understand why the worship of Jupiter was not consistent with that of Christ. An-

other difficulty was created by the spiritual nature of our religion. It was in vain that the Roman magistrate inquired for the images and statues of the God of the Christians, for the altars and temples consecrated to him. Unwilling or unable to believe that an invisible Being could be the immediate object of adoration, he pronounced that to be atheism which differed so widely from the general appearance of theism; and thus, among the ignorant at least, the Christians were liable to the double imputation, not only that they repudiated the national divinities, but that they substituted none other in their place. It was probably this last charge which inflamed and envenomed the rest; for the same moral enormities which were pardonable in the devotee of Apollo became infamous in those who partook of no devotion, and the worshippers of every idol under heaven united their clamors against the impiety of the atheists; and unhappily, among the impassioned natives of the East, clamors are seldom unattended by violence, and violence is only satisfied with blood.

There is, perhaps, no characteristic by which Christianity was so early and so strongly distinguished as the pious horror of every approach to idolatry. This singularity would be more commonly forced on the attention of pagans than any other, and no doubt, in the opinion of the vast majority with whom the image was in fact the object of worship, it would be sufficient alone to constitute irreligion. Again, it led them into a second and scarcely less dangerous imputation, that of disloyalty, since the image of the emperor, which was usually exalted among the standards and in public places, was not honored by the devout salutation of the Christian; and this omission naturally gave pretext to a political charge.

As another cause of the early unpopularity of the Christians, we may mention the unceasing opposition of all whose personal interests were concerned in the support of paganism. The magnificent temples and gorgeous ceremonies of that superstition were a source of unflinching profit, not only to a numerous race of priests and hierodules, of architects and statuary, but to multitudes of citizens who lived, like the craftsmen of Ephesus, on the treasury of the temple, and were engaged by their most immediate necessities to maintain the worship; and not these only, but the whole mass of the populace were in some degree gainers by the sacrificial profusion which distinguished their religion, to say nothing of the share which they took in those splendid processions and rites which converted the practice of religion into mere sensual enjoyment and careless festivity. When in the place of this pompous pageantry it was proposed to substitute a simple spiritual worship, recommended, not by the display of external ceremony, which it scorned, but by inward purity and the sanctity of moral excellence, in opposition at the same time to the passions of all men and to the immediate interests of many, it would have been strange indeed if the popular voice had not been raised against it.

To the many causes of excitement already mentioned we may add one more, the substantial motive of avarice, since we invariably find that the Christians who were the objects of these popular commotions sustained, among other injuries, the loss of their property. And we must not forget that in many instances the Roman police tolerated, perhaps encouraged, excesses which it might possibly consider as an innocent exercise of popular feeling or as a part of a religious ceremony.

## Heresies of the First Three Centuries.

Without detaining the reader by a classical dissertation on the primary and derived meanings of the term heresy, we proceed at once to state that the apostolical Fathers, following the footsteps of the apostles themselves, regarded with great jealousy the birth and growth of erroneous opinions; and next, that they did not authorize, either by instruction or example, any severity on the persons of those in error. They opposed it by their reasoning and their eloquence, and they avoided its contagion by removing from their communion those who persisted in it; but they were also mindful that within these limits was confined the power which the Church received from the apostle who founded it over the spiritual disobedience of its members.

The heretics or seceders from the primitive Church were extremely various, at least in name, and there is no period in ecclesiastical history in which dissent has appeared under so many denominations as the earliest. But it seems doubtful whether many of those sects had very numerous adherents, or were at all generally dispersed over the surface of Christendom; some of them were merely local, scarcely extending beyond the spot which gave them birth, and others were chiefly confined to the controversial writers, as the difference was on points too abstruse to create much interest in those days among the body of the people. Many, again, have left behind them no traces of their existence, and their very names have only been preserved through the labors of their adversaries, so that we may fairly presume, in spite of the display and parade of denominations, that the great majority of the early Christians remained attached to the primitive faith. In the mean time, the mere fact of the existence of so many different forms of Christianity certainly proves not only the zeal but also the numbers of the early converts; for if these had been inconsiderable, we should have heard little either about dissenters from the orthodox body, or of their divisions among themselves. The paucity and weakness of the faithful would have been a sufficient guarantee for their unanimity.

That many of those errors gained footing at a very early period, long before the conclusion of the first century, has not been disputed with any probability; and the fact is attributed with great appearance of truth to the twelve or perhaps fifteen years which intervened between the ascension of Christ and the departure of the apostles from Judæa. During this period, partly through the dispersion of the converts after the martyrdom of Stephen, partly through the periodical religious communications of foreign Jews with their native country, some imperfect accounts of the history and doctrine of the Saviour were spread abroad, even before the fullness of the truth was delivered by the apostles. This circumstance will assist us in accounting for the great variety of forms in which error presented itself, especially if we consider the vast extent of country and the widely separated regions over which the faith was diffused. But the cause to which we should more directly ascribe the multiplicity of heresies is the philosophical subdivisions of the heathen world, and the facility of combining opinions the most incongruous. Thus, while all parties were desirous to adapt the particular tenets of Christianity to their own preconceived opinions, which again materially differed in different sects, the forms created by such associations were

necessarily very numerous and frequently very monstrous.

It would be tedious and unprofitable successively to enumerate all the heresies and dissensions of the early Christians, and it is very difficult to classify them with accuracy.

Mosheim distinguishes three classes of early heretics: 1. Those who associated Christianity with Judaism, who were the Nazarenes and Ebionites; 2. Those who engrafted some of its doctrines on the system of the Oriental philosophy, among whom are accounted, of the Asiatic school, Elaxi, Simon Magus, Menander, Saturninus, Cerdo and Marcion; of the Alexandrian, Basilides, Carpocrates and the perfecter of the system, Valentinus; 3. Those who endeavored to explain certain of the Christian mysteries by the principles of the Grecian philosophy, among whom are placed Praxeas, Artemon, Theodotus and others. It has been objected to this division that it is not supported by the authority of the ancient Fathers, who in no instance derive the opinions which they combat from the Oriental philosophy. Tertullian, indeed, expressly calls the philosophers the parents or "patriarchs of the heretics," but it is to the Grecian school that he intends to confine that charge, and especially to the sects of Pythagoras and Plato, against which he constantly alleges it. Other writers hold the same language, and Irenæus goes so far as to derive the doctrine of the succession of Æons, promulgated by Valentinus from the Greek theogonies, not from the speculations of the Eastern sages. From this circumstance we are at liberty to infer either that the Eastern philosophy had no share in the origin of the early heresies, or that those Fathers were entirely unacquainted with its existence.

A different view is taken of this subject by Dr. Burton. He ascribes the rise of all the oldest heresies to the Gnostic philosophy. But at the same time, under that comprehensive name, we understand him directly or indirectly to combine almost every form of philosophy which was professed throughout the whole extent of the Eastern and Western empire. The three sources which contributed to form this heterogeneous mixture were—1. The Eastern doctrine of the two principles; 2. The Jewish Cabala; 3. The Platonic philosophy. The last of these, under its various modifications, supplied the most abundant stream, and the point of their conflux and commixture is naturally supposed to have been that vast emporium of commerce and literature, Alexandria. In this city principally Gnosticism, such as it is here described, is believed to have been amalgamated into one substance, and hence distributed over the various provinces of the Roman empire, not very long before the birth of Christ.

In the concise view which we are here enabled to present of the multifarious family of heresies, we shall rather be directed by their subject than by their supposed origin—by the common character which runs through them than by the source whence that character may have been derived. And with this intent we shall first mention those wherein some of the Christian doctrines were corrupted by association with that extended philosophical system which took its root in the vain inquiry respecting the origin of evil; secondly, we shall notice those which laid the foundation of the great controversies respecting the Trinity and incarnation, which broke out in succeeding ages; and lastly, we shall mention one or two of those which appear to have been excited by mere indi-

vidual enthusiasm or madness. In the mean time, we readily admit the imperfection of this division in the light of an absolute distinction, since some of the opinions held by those whom we shall place in the second class might be traced to the principles which will be treated in the first; and there is so much wildness in the ravings of certain in both those classes that they might perhaps without much error be adjudged to the third.

I. The Oriental philosophy, which is commonly confounded with Gnosticism, proceeded from the hopeless inquiry into the nature and origin of evil. Convinced that this could not possibly be ascribed to the divine agency, the speculators embraced what appeared to be the only alternative, and attributed it to matter, and matter must of consequence be eternal. And then, when they proceeded to consider the various forms of matter, senseless and animal, exhibited in the visible world, and their seeming imperfections, they found it impossible to account for so many modifications of evil, except by the supposed agency of some being, superior indeed to man, but subordinate to the Author of all good. At this point ceased the uniformity of the fanciful theory, and it branched off into inquiries like the following: What was this mighty though inferior being? of what origin, power, attributes? one and alone, or assisted or served by others, equal or inferior?

All these points were disputed; all, however, agreed as to the independent existence of the two principles, good and evil; and nearly all that the latter was the Creator of the world. Such were the philosophical notions of these persons; and such was their attachment to them that even when they became persuaded of the divine mission of Christ, they were unwilling entirely to sacrifice them, but rather strove to associate them with the doctrines and engraft them on the history of the Bible. The first consequence of so perverse a misapplication of human reason was this—the monstrous conclusion that the God of the Jews was the evil principle, and that Jesus Christ was sent down by the good principle to put an end to his reign on earth; that the former was the God of the Old, and the latter that of the New Testament. At this point the philosophy of the Gnostics ended, and their heresy began; and the errors which we have mentioned speedily led them into others: after rejecting—such was the necessary consequence of their opinions—the inspiration and authority of the Old Testament, they applied themselves to the misrepresentation of the New. They denied the humanity of Christ, asserting that he came not in flesh; that he suffered not; that he died not; that what seemed to be material in his nature was a fantastic, incorporeal substance. The same principles obliged them also to dispute the resurrection of the body, a substance too gross for an eternal destiny. This opinion again variously affected their moral practice, for while there were undoubtedly some who mortified the sensual portion of our nature for the greater perfection of the soul, there are also said to have been others of more violent enthusiasm or fiery temperament, who permitted every license of impurity to that which lay so far beneath consideration and respect. It is chiefly to the Gnostic heretics of Egypt (who were distinguished from their brethren by greater wildness in their speculations) that these excesses are attributed; we cannot now determine how truly. But on the other hand it is just to mention that, in professing the Christian name, those heretics did not always shrink from the dangers which surrounded it; and we have evidence that many

among them encountered persecution with the same courage which distinguished their brethren of the Church, and endured it with the same unflinching constancy.

Among the Gnostic heretics (thus we shall continue to denominate those who associated, however variously and diversely, the Eastern or Persian system with some belief in Christ) it is usual to account the followers of Simon Magus, the first corrupter of the Christian doctrine: these are said to have been numerous, especially at Rome; and the celebrity of their master has been considerably increased by an error of Justin Martyr, repeated by several of the fathers, who mistook a statue inscribed to Semo, a Sabine deity, for a proof of the deification of that heresiarch. Nicholas, one of the seven deacons mentioned in the Acts, is asserted to have misled the sect called Nicolaitans; Menander, the pupil of Simon, perpetuated his teacher's errors, and through him they were transmitted to Saturninus, who disseminated them in the Asiatic, and to Basilides, who may have introduced them into the Egyptian school. In this prolific soil, equally favorable to the growth of evil and of good, they became, among the gross disciples of Carpocrates, the principles of deliberate immorality, while they received from the ingenuity of Valentinus such refinement as to call on that writer the particular attention both of Irenæus and Tertullian. Cerdo, and after him Marcion, the most distinguished among the heretics of his day, introduced the same delusion, with certain variations, into Rome during the reign of Antoninus Pius. Here the doctrines were immediately disclaimed by the prelates of that Church, and confuted by the ablest Christian writer, Justin Martyr. They were afterward made the subject of a separate treatise by Tertullian. It has been inferred from the discovery of some Gnostic medals in France that the heresy was at one time generally disseminated in the western provinces. But this fact, liable as it is to some dispute, is not sufficient to counterbalance the silence of history, confirmed by the certainty of the early disappearance of the sect. In the mean time, we do not dispute that the philosophy of the Gnostics had some prevalence throughout that part of the empire during the first and second centuries, but it was not until the end of the second that Christianity can be said to have made any progress there.

Soon afterward, in the year 172, Tatian, a man of some learning, and a disciple of Justin Martyr, built on the basis of Gnosticism the heresy of the Encratites. These sectarians professed the simplest principles of the monastic life, meditation and bodily austerity. It may be said, perhaps, that under the names of Essenes and Therapeute such enthusiasts existed in the very earliest age of Christianity, and even before its foundation; but it is certain that it was at this period, and under this designation, that they first attracted serious attention; and it is not disputed that they met with utter discouragement and condemnation from the Church. For the birth of monasticism was not destined to take place in an age of piety and sincere devotion; and when at length it was produced by fanaticism infuriated by persecution, its growth was still unequal, keeping pace with the corruption of religion and the degradation of the Church.

It is a strong but scarcely exaggerated expression of St. Jerome that the body of our Lord was declared to be a phantom while the apostles were still in the world, and the blood of Christ was still fresh in Judæa. The Phantastics, under the denomination of Docetæ, were, indeed, a sect of very

early origin, and we connect their opinions with one peculiarity of the Gnostic system which we have not yet mentioned. Certain among those philosophers, in order to remove the Author of good to an immeasurable distance from the contact of matter, imagined a vast succession of created but superhuman beings as the agents of communication between the supreme God and the world, or at least its Creator. These were emanations from the deity; and they appear, when their office was discharged, to have been restored to the Pleroma, to the presence of him who sent them: these beings were called Æons. Among them a very high rank, possibly the highest, was assigned to Christ; but from this point the Gnostics broke off into two different and almost opposite theories: many imagined that Jesus was a mere man, and maintained that the æon Christ descended upon the man Jesus at his baptism and left him immediately before his crucifixion, so that Christ was not, in fact, subjected to pain and death; while others held that the body with which Christ appeared to be invested was not really human and passible, but unsubstantial or æthereal, or at least immaterial: these last were called Docetæ. At the same time, both parties alike misunderstood that which the Church considered to be the peculiar doctrine and object of Christianity, for they agreed in believing that the mission of Christ had no further intention than to reveal the knowledge of the true God; they denied the resurrection and the final judgment, and by explaining away the death of Christ they deprived his religion of the doctrine of the atonement.

From the above brief and very general outline of the Gnostic heresies, which differed again widely from each other in many subordinate opinions, we perceive how very far they were removed from the precincts of reason and truth. Indeed, they retained so much more of Gnosticism than they assumed of Christianity that it was only in the ancient and very broad acceptance of the term that they could be fairly denominated heresies, and thus we are less disposed to censure the severity of those Fathers who refused them the name of Christian; for however cautious we should be in withholding that appellation from those whose errors are founded on the mere perversion of reason, we may safely disclaim our fraternity with men who substitute for the fundamental doctrines and the clearest truths of the gospel wild visions and theories which have not any ground or existence, except in vain and lawless imagination. We shall do well to conclude this subject in the words of Le Clerc, one of the most rational and faithful among our historical guides: "I am weary of the Valentinians (thus he begins his account of the year 145), and so I imagine are my readers; but the history of the second century is so crammed with them, and the Fathers, both of those and of later times, so often refer to them, that it is necessary to expose monstrous opinions which in themselves do not merit one moment's attention." In truth, their principal, if not their only, claim on our attention is that the books of the New Testament appear to contain some allusions to them which it is our duty to examine and understand.

II. We have just observed that among the earliest corrupters of the Christian doctrines there were some who disputed the human nature of Christ. It appears to us equally clear there were also others who denied his divinity. The oldest, and perhaps the most numerous, among these were the Ebionites.

*Ebionites.*—Tertullian considers them as a sect of Judaizing Christians, named from their founder, Ebion, who strictly maintained the observance of the ceremonial law and rejected the miraculous conception and the divine nature of the Saviour. Eusebius, in his "Ecclesiastical History," describes them in these words:

"The Ebionites were so called from the poverty and meanness with which they dogmatized concerning Christ, for they considered him as a mere man born of the connection of a man and Mary. And they thought, too, that the ceremonial law was to be followed, as neither faith in Christ nor the life led through that faith was sufficient for salvation. But there were others bearing the same appellation who escaped the extravagant absurdity of these former, since they did not deny that the Lord was born of a virgin and the Holy Spirit. But neither did these, acknowledging his pre-existence and that he was Logos and Sophia (the word and the wisdom), turn entirely away from the unrighteousness of the former, chiefly because they too were careful about the bodily service of the law. These, then, did not receive the Epistles of the apostle, calling him an apostate from the law, and only used the gospel according to the Hebrews; but they observed Sunday in commemoration of the resurrection, keeping the Jewish Sabbath."

This description agrees in all material points with the account of Tertullian; and without proceeding to deeper investigation we may safely infer from it two historical truths—that the peculiar opinions of the Ebionites were confined, or nearly so, to the Jewish converts, and that they were neither wholly nor in part the doctrines of the ante-Nicene Church.

It is well known that the high antiquity of the opinions of the Ebionites has been held by some to be an evidence of their truth; but the same inference might be drawn, with the same reason, respecting the delusions of the Phantastics, which had at least as early an origin. The Ebionites probably arose after the publication of three of the Gospels. The Gnostic errors of the Docetæ may even have preceded the preaching of the apostles; they were certainly contemporary with it. Again, if it be admitted that the apostles were the interpreters of God's word, and if it be not proved that the sect of the Ebionites was founded by any one of them, and if it be certain that the Fathers who subsequently directed the Church and explained its doctrine did invariably disclaim that sect, we may fairly conclude that its opinions were neither favorably received nor at all commonly adopted. On the other hand, it is endeavored; by confounding the Ebionites with the Gnostic heretics, to make them in some degree accountable for all the absurdities of the latter; and these, it is truly urged, had all a tendency to the opposite extreme, to spiritualize the body rather than to degrade the divine nature of Christ; and it is hence inferred that it was Jesus alone to whom the Ebionites attributed a human nature, while they acknowledged the uncontaminated divinity of Christ. It is possible that there were some calling themselves Ebionites who were in fact merely Gnostics. But in the face of our direct authorities we cannot admit the hypothesis in question. What Tertullian and Eusebius expressly tell us to have been the Ebionitish opinions respecting Christ we cannot suppose to be meant of Jesus as opposed to Christ; and we feel obliged to believe that those are as far removed from truth, on the one hand, who dispute the early

existence of the Unitarian opinions as those are, on the other, who assert their early reception by the Church; they have existed from the beginning, and from the beginning they have been condemned.

Again, the doctrine of the mere humanity of Christ, separated from the Judaism of the Ebionites, was advanced toward the end of the second century by Theodotus and Artemon; and during the episcopacy of Victor the former was expelled from the Church of Rome for that error. Eusebius in this place designates him as the "father of an impious apostasy;" and in so far as he had divested the old opinion of its Judaism and advanced it nakedly in the very face of the Church, the assertion is true. For any claim which it may have advanced to a previous existence at Rome, or in any of the European churches, is sufficiently answered by reference to the writings of Justin, and Miltiades, and Tatian, and Clement, and Irenæus, and Melito, "by all of whom," says Eusebius, "the divinity of Christ is asserted."

*Artemon.*—In the next century the heresy of Artemon (it became more generally known by his name) was revived by Paul of Samosata, bishop of Antioch. A synod of bishops, presbyters and deacons was convoked at Antioch in the year 269 to take cognizance of the offence; and Eusebius notices the eagerness with which they hurried "from all directions against the defiler of Christ's flock." In a numerous assembly, in his own metropolis, the bishop found many defenders, but he was at length convicted and sentenced to expulsion from his throne. But as he resisted the execution of the sentence, and as the Church was not yet able to enforce its own judgments, application was made to the emperor Aurelian, whose authority finally removed the refractory offender. This was the first instance of the interference of the secular power in the internal affairs of the Church, and consequently Baronius is warm in his praise of Aurelian: "He was the first to point out that the imperial authority should be called in to chastise those who did not acquiesce in episcopal decision."

*Praxeas.*—The controversy respecting the nature of Christ's existence on earth, which presently so branched out as to involve the doctrine of the Trinity as well as the Incarnation, may be said to have first assumed a tangible form under the pen of Praxeas, a writer of the Grecian school. He gave publicity to his opinions about 200 A. D., and was answered very soon afterward by the great champion of the Church, Tertullian. The opinions of Praxeas (as is natural in a question capable of so much metaphysical subtilty) are variously represented; but the doctrine of the Church is very clearly stated in the following words of his antagonist: "We believe in one God, but under the following dispensation or economy—that there is also a Son of God, his Word, who proceeded from him; by whom all things were made, and without whom nothing was made; who was sent by him into the Virgin, and was born of her, being both man and God, the son of man and the son of God, and called Jesus Christ; he suffered, died and was buried, according to the Scripture; and was raised up again by the Father, and was taken up into heaven, there to sit at the right hand of the Father; and thence to come to judge the quick and the dead; who sent from heaven from his Father, according to his promise, the Holy Ghost, the Comforter, the Sanctifier of the faith of all who believe in the Father, Son and Holy Ghost." Such, according to this author, was

the faith handed down in the Church, from the first preaching of the gospel; and we consider this to be historical truth of no small importance.

*Sabellius.*—The heresy of Praxeas was succeeded (or revived), in the course of about fifty years, by that of Sabellius. Both proceeded, in appearance, from the difficulty of reconciling the trinity with the unity of the Godhead—in reality, from our human and necessary incapacity to comprehend the nature of the union. But Greek philosophy was too vain to admit any limits to the human comprehension, and too disputations to quit so fine a field for sophistry as was opened to it by an abstruse and inexplicable question. And certainly that philosophy lost nothing either in minuteness or pertinacity, when it ascended to the climate and employed the genius of Africans. Sabellius was an African, and seemingly either bishop or presbyter at Barce, the capital of the Cyrenaica; he denied the distinct personality of the second and third persons of the trinity, and maintained that a certain energy only, proceeding from the supreme Parent, or a certain portion of the divine nature, was united to the Son of God, the man Jesus. And in the same manner he considered the Holy Ghost to be a portion of the everlasting Father. This error, into which he was led by an excessive fear of tritheism (the acknowledgment of three Gods), was liable to the inference that the Being who suffered on the cross was in fact the Father; hence his followers were called Patripassians. He was confuted by Dionysius, bishop of Alexandria.

III. We shall not dwell upon the varying shapes of mere frenzy. The deliberate errors of an informed and serious mind, however in appearance remote from reason, always merit some sort of consideration; but the dreams of an ignorant fanatic can have no claims on our time or reflection. Perhaps we should place under this head some of the wilder of those heresies usually called Gnostic; and some would refer to the same origin the opinions of the Manichaean sect; but we shall here confine ourselves to those of the Montanists. About 170 A. D., a vain and superstitious enthusiast, named Montanus, began to prophesy in Phrygia and other provinces of Asia Minor; he professed to be the Paraclete or Comforter, the same who had descended upon the apostles, and whose return on earth before the second coming of Christ, for the purpose of completing the divine Revelation, was expected by many of the faithful; and his trances, and ecstatic raptures, and fanatic ravings, were probably regarded by the credulous and wondering multitude as the surest signs of divine inspiration. Certainly there were many in those regions who followed him; and his success was promoted by his association with two prophetesses, named Maximilla and Priscilla, who confirmed his mission and shared his spirit. Another cause of the temporary fame of Montanism was the severity of the morality inculcated by it; the strictest celibacy and the most rigid fasts were exacted from the proselytes, and this circumstance threw an appearance of sanctity round the sect, which seems to have deadened the penetration of Tertullian, for he presently professed himself its advocate. To that circumstance perhaps this heresy may be indebted for most of its celebrity; for it was condemned by certain Asiatic councils at the time of its eruption, and it appears to have made very little progress after the second century, and at no time to have found general reception beyond the precincts of its birthplace, though some remains of it subsisted there for two or three ages.

Before we quit the subject of heresy, we must mention a controversy which divided the Church during the third century, respecting the form of receiving a converted heretic into the number of the orthodox. The churches of the West were, for the most part, of opinion that the baptism of heretics was valid, and that the mere imposition of hands, attended by prayer, was form sufficient to solemnize their introduction within the pale; whereas the less moderate Christians of Asia decided in council that their admission must be preceded by a repetition of baptism; and this decision was approved and enforced by Cyprian in the churches of Africa. Stephen, bishop of Rome, who was at the head of those who held the contrary opinion, conducted his opposition with injudicious violence; he excommunicated all who differed from him, and discovered even thus early the germs of papal arrogance. The mention of this controversy is important, at least on one account, as it gives us an additional proof of the very serious view in which heresy was regarded by the churchmen of those days, and the scrupulousness of their care to preserve the purity of the true faith.

*Novatians.*—We may conclude with some notice of the sect of the Novatians, who were stigmatized at the time both as schismatics and heretics, but who may perhaps be more properly considered as the earliest body of ecclesiastical reformers. They arose at Rome about 250 A. D., and subsisted until the fifth century throughout every part of Christendom. Novatian, a presbyter of Rome, was a man of great talents and learning, and of character so austere that he was unwilling, under any circumstances of contrition, to readmit those who had been once separated from the communion of the Church. And this severity he would have extended not only to those who had fallen by deliberate transgression, but even to such as had made a forced compromise of their faith under the terrors of persecution. He considered the Christian Church as a society where virtue and innocence reigned universally, and refused any longer to acknowledge as members of it those who had once degenerated into unrighteousness. This endeavor to revive the spotless moral purity of the primitive faith was found inconsistent with the corruptions even of that early age; it was regarded with suspicion by the leading prelates, as a vain and visionary scheme; and those rigid principles which had characterized and sanctified the Church in the first century were abandoned to the profession of schismatic sectaries in the third.

From a review of what has been written on this subject, some truths may be derived of considerable historical importance; the following are among them: 1. In the midst of perpetual dissent and occasional controversy a steady and distinguishable line, both in doctrine and practice, was maintained by the early Church, and its efforts against those whom it called heretics were zealous and persevering, and for the most part consistent. Its contests were fought with the "sword of the Spirit," with the arms of reason and eloquence; and as they were always unattended by personal oppression, so were they most effectually successful—successful, not in establishing a nominal unity, nor silencing the expression of private opinion, but in maintaining the purity of the faith, in preserving the attachment of the great majority of the believers, and in consigning either to immediate disrepute or early neglect all the unscriptural doctrines which were successively arrayed against it. 2. The greater part of the early heresies was

derived from the impure mixture of profane philosophy with the simple revelation of the gospel. Hence proceeded those vain and subtle disputations respecting things incomprehensible which would indeed have been less pernicious had they only exercised the ingenuity of men, without engaging their passions. Their bitter fruits were not fully gathered until a later age; but they served, even in their origin, to perplex the faith and disturb the harmony of many devout Christians. 3. No public dispute had hitherto risen respecting the manner of salvation, for the conclusions deducible from the Gnostic hallucinations are not worthy of serious consideration; the great questions respecting predestination and grace had not yet become matter of controversy, nor had any of the fundamental doctrines of Christianity been assailed excepting the Trinity and the incarnation.

*Early Fathers.*—As we have made frequent mention of the principal writers, commonly called Fathers, of the ancient Church, we shall subjoin to this chapter a very short account of some of the earliest among them. We do not profess any blind veneration for their names, or submission to their opinions, but we are very far removed from the contempt of either. For if we are to bend to any human authority (as in such matters some of us must always do, and all of us sometimes), those are assuredly the safest objects of our reverence who stood nearest to the source of revelation, and received the cup of knowledge from the very hands of the apostles. They were erring and feeble mortals like ourselves, much inferior in intellectual discipline, and vitiated by early prejudices necessarily proceeding from the oblique principles and perverse systems of their day. Nevertheless, they were earnest and ardent Christians; in respect at least to their religion they had access to infallible instructors, and the lessons which they have transmitted to us, howsoever imperfectly transmitted, should be received with attention and respect.

The apostolic Fathers are those who were contemporary with the apostles, some of whom are known, and all of whom may be reasonably believed to have shared their conversation and profited by their instruction. These are St. Barnabas, Clement of Rome, Hermas, Ignatius and Polycarp. They were all (excepting probably Clement) natives of the East, and all originally wrote in the Greek language. The works which have reached us under their names are not numerous; and though the genuineness of some of them has been justly suspected, there is no reason to doubt the very high antiquity of all. They were composed with various objects, according to the dispositions or circumstances of their writers. The design of the epistle attributed to St. Barnabas was to abate the respect for the peculiar rites and institutions of the Jewish laws, and to show that they were not binding upon Christians. The "Shepherd of Hermas" consists of three books, in the first of which are four visions, in the second twelve commands, in the third ten similitudes. The first and third parts are of course very fanciful, yet were they not perhaps unsuited to the genius of the countries and the age to which they were addressed; the second contains some excellent moral precepts, and all abound with paraphrastic allusions to the books of the New Testament. The epistles of Ignatius have suffered many obvious interpolations and corruptions, for the fifteen epistles which were attributed to him have all been rejected by most learned persons except three which seem to be really his. The author was bishop of Antioch; he suffered martyrdom about

107 A. D., and the opinion that he invited rather than shunned this fate seems to be consistent with the ardor of his character. The genuineness of Polycarp's epistle to the Philippians has scarcely been questioned; it was written (soon after the death of Ignatius) in the spirit of sincere piety; it abounds with Scriptural expressions and frequent quotations of the recorded words of Christ. Polycarp was bishop of Smyrna on the appointment (as is asserted without any improbability) of the apostle St. John; and he suffered martyrdom, as we have already described, in the reign of Marcus Antoninus. But the most important record of the apostolic age remaining to us is the "Epistle of the Church of Rome to the Church of Corinth," written about 96 A. D. by Clement, bishop of Rome. Its object was to allay some internal dissensions of the Corinthians, and it contains many useful and noble truths, flowing from a vigorous mind and purely Christian spirit, in language never feeble and occasionally eloquent.

Those pious persons wrote before any association had taken place between philosophy and religion, and were better instructed in the knowledge of Scripture than in the lessons of the schools; and their method of reasoning, no less than their style, attests their want of profane education; still, it possesses a persuasive simplicity well suited both to the character of the writers and the integrity of their faith. The fundamental doctrines of Christianity are inculcated by them, and these are everywhere so interwoven with the highest precepts of morality as to prove to us that the belief of those men was inseparable from their practice, and that it had not ever occurred to them to draw any verbal distinction between these; they delivered the truths which had been entrusted to them, and associated their moral and doctrinal instructions as inseparable parts of the same scheme. This perhaps is the most peculiar feature in their compositions, and that in which they most resemble the inspired writings. Another is the utter neglect of formal arrangement in the display of their arguments or the delivery of their rules of conduct—a neglect which unquestionably exposed them to the contempt of the philosopher, who sought in vain for a system in their lore, but which well accorded with the plain and unpretending character of truth. But that merit by which they have conferred the most lasting advantage on Christianity (at least the last three of them), and which will make them very valuable monuments in every age, is their frequent reference to almost all the books of the New Testament such as we now possess them. Thus they furnish us with decisive evidence of the genuineness of those books; and their testimony is liable to no suspicion, because it was not given with any such view.

The principal Greek writers who immediately succeeded the apostolic Fathers were Justin Martyr and Irenæus. Justin Martin was a learned Samaritan, who, after having successively attached himself to the Stoics, the Peripatetics, the Pythagoreans and the Platonists, discovered the insufficiency and emptiness of philosophy. His attention was called to Christianity by the sufferings inflicted upon its profession and the firmness with which he had beheld them endured. He inferred that men so contemptuous of death were far removed from the moral degradation with which they were charged, and that the faith for which they died so fearlessly must stand on some foundation. He examined that foundation, and discovered its stability. The sincerity of his conversion is attested by his martyrdom. He was executed by

the emperor, whose philosophy he had deserted; and he perhaps never was so strongly sensible of the superiority of that which he had preferred as at the moment when he died for it. He wrote two apologies for Christianity—the first probably addressed to Antoninus Pius, the second to Marcus—and a (supposed) dialogue with a Jew named Trypho. This last contains many weak arguments, and trifling and even erroneous interpretations of Scripture, mixed up with some useful matter. The two former are more valuable compositions; they were so in those days, because they contained the best defence of religion which had then been published, maintained by arguments very well calculated to persuade those to whom they were addressed; and they are still so, because we find in them many quotations from the same four Gospels which we now acknowledge; they relate many interesting facts respecting the religious customs and ceremonies of the Christians of those times, and they prove the general acceptance of all the fundamental articles of our belief. As Justin flourished only one century after the preaching of Christ (his conversion is usually placed at the year 133 from the birth of our Saviour), we are not extending the value of tradition beyond its just limits when we consider his opinions as receiving some additional weight from their contiguity to the apostolic times; and if it were possible to mark by any decided limit the extent of traditional authority, we should be disposed to trace the line immediately after his name; for admitting that Irenæus, who presently succeeded him, by his Oriental birth and correspondence may have received some uncorrupted communications transmitted through two generations from the divine origin, we shall still find it very difficult to distinguish these from the mere human matter with which they may be associated; and this difficulty will increase as we descend lower down the stream, so that we may safely detach the notion of peculiar sanctity or conclusive authority from the names and writings of the succeeding Fathers, though they contain much that may excite our piety and animate our morality and confirm our faith.

We might divide the first three hundred and thirteen years of the Christian era into three periods in respect to its internal history. The first century was the age of Christ and the apostles, of miracles and inspiration inherent in the Church; the next fifty years we may consider as that of the apostolic Fathers, enlightened by some lingering rays of the departed glory, which were successively and insensibly withdrawn; the third was the period of severe probation and bitter anxiety, unalleviated by extraordinary aids, and so far removed from human consolation that the powers of the earth might seem to have conspired with the meanest of its progeny in order to oppress and desolate the Church of Christ, yet even this was not without the Spirit of God.

Irenæus was bishop of Lyons about A. D. 178. He is chiefly celebrated for his five books "Against Heresies," containing confutations of most of the errors which had then appeared in the Church. Though the language which he employs in this contest is not always that best adapted either to persuade or to conciliate, his sincere aversion from religious dissension is not questioned. It is proved indeed by the epistle which he addressed to Victor, bishop of Rome, on his insolent demeanor in the controversy respecting Easter, and which breathes a generous spirit of Christian moderation. And in good truth the individual exertions of

churchofmen against the progress of unscriptural opinions were in those days the more necessary, and their warmth the more excusable, as there were yet no articles of faith to trace out the limits of orthodoxy, nor any acknowledged head, nor any legally established system of ecclesiastical government. The unity and the purity of the Church were chiefly preserved by the independent labors of its most eminent and influential ministers, divided as they were both by language and manners and distance, and entirely unsupported by any temporal authority. So that, if we were still disposed to feel any surprise at finding such numerous forms of heresy, so very near both to the time and place where the revelation was delivered, the above considerations would tend to remove it, while they certainly teach us that such errors cannot permanently or generally prevail against Scriptural truth, as long as they are steadily opposed by temperate and reasonable argument, and by no other weapon than argument only.

### The Church under Constantine.

During the early part of Diocletian's persecution Constantius Chlorus ruled, with as much humanity as circumstances permitted him to exercise, the provinces of the West. On his death, at York, in the year 306, the army proclaimed Constantine, his son, emperor. In the mean time, the provinces eastward of Gaul were distracted by the dissensions of rival emperors, which favored the growing strength of Constantine. In 311, Galerius, the fiercest among the assailants of Christianity, died, and his dominions were divided between Maximin and Licinius; Maxentius had already usurped the government of Italy and Africa. Presently, Constantine, justified, as most assert, by sufficient provocation, marched into Italy and overthrew Maxentius in the immediate neighborhood of Rome; that tyrant (as all admit him to have been) was drowned in the Tiber, and his dominions were added to the possessions of the conqueror. This event took place in the year 312, and it has been usually assigned as marking the period of Constantine's conversion to Christianity. A miraculous story is connected with this epoch in our history. As the emperor was marching toward Rome at the head of his army he beheld a luminous cross suspended about noonday in the air, and inscribed with the following words, "Tauto nika," "By this conquer." The phenomenon confirmed his uncertain faith, and afforded him the surest omen of victory. But this was not all; during the ensuing night the form of Christ himself presented itself with the same cross, and directed him to frame a standard after that shape. And it is certain that about that period, and possibly on that occasion, a standard was so framed, and continued for many following years to be displayed whenever it became necessary to excite the enthusiasm of the Christian soldiers, but the extraordinary appearances to which its adoption is ascribed demand the most rigid examination.

In the first place, the story which we have shortly given is related by no contemporary author, excepting Eusebius; next, it is related in his life of Constantine, and not in his ecclesiastical history; it is related in the year 338, or six-and-twenty years after the supposed appearance; it is related on the authority of Constantine alone, though it must have been witnessed by his whole army, and notorious throughout his whole empire; and lastly it was published after the death

of Constantine. In an age wherein pious frauds had already acquired some honor, by a writer who, respectable as he undoubtedly is, and faithful in most of his historical records, does not even profess those rigid rules of veracity which command universal credit, in a book which rather wears the character of partial panegyric than of exact and scrupulous history, a flattering fable might be published and believed, but it can claim no place among the authentic records of history, and by writers whose only object is truth it may very safely be consigned to contempt and oblivion.

The defeat of Maxentius was followed by a conference between Constantine and Licinius, which led to the publication, in the March of 313, of the celebrated Edict of Milan.

*Edict of Milan.*—This edict was a proclamation of universal toleration; but its advantages were of course chiefly or entirely reaped by the Christians, as theirs had been the only religion not already tolerated. It gave back to them the civil and religious rights of which they had been deprived; it restored without dispute, delay or expense the places of worship which had been demolished, and the lands which had been confiscated; and free and absolute power was granted to the Christians, and to all others, of following the religion which every individual might think proper to follow.

The year which followed the final success of Constantine was disgraced by the execution of his eldest son; and it is not disputed that the progress of his career was marked by the usual excesses of intemperance and worldly ambition. Some of his laws were severe even to cruelty, and the general propriety of his moral conduct cannot with any justice be maintained. Hence a suspicion has arisen as to the sincerity of his conversion—chiefly, as it appears to us, or entirely founded on the inadequacy of his character to his profession. But is there any page in Christian history or any form of Christian society which does not mournfully attest the possibility of combining the most immoral conduct with the most unhesitating faith? Or is this a condition of humanity from which monarchs are more exempt than their subjects? We should recollect, moreover, that the character of Constantine, notwithstanding its grievous stains, will bear a comparison with some of the best among his pagan predecessors, while it was free from those monstrous deformities which distinguished not a few of them, and which have indeed been rarely paralleled in Christian history. But even had his conduct been more reprehensible than in truth it was, it would have furnished very insufficient evidence against the sincerity of his belief. Again, it was usual in those days, in continuance of a practice of which we have mentioned the cause and origin, to defer the sacrament of baptism until the approach of death, and then once to administer it as the means of regeneration and the assurance of pardon and grace. In compliance with this custom, the emperor was not baptized (he did not even become a catechumen) until his last illness; but no argument can hence be drawn against his sincerity, which would not equally apply to a large proportion of the Christians in his empire. In his favor the following facts should be observed: For many years he had publicly and consistently professed his belief in Christianity; in a long discourse, which is still extant, he even expatiated on its various proofs; he began his reign by protecting the believers; in its progress he favored and hon-

ored them; he inscribed the cross on the banners of the empire; he celebrated the festivals of the Church; he associated in the closest intimacy with Christian writers such as Laetantius and Eusebius and other prelates; he inquired into all the particulars of their faith, and displayed what some have thought an inconsiderate zeal for its purity. By such reasons, according to every fair principle of historical inference, we are precluded from any reasonable doubt on this subject; nor need we hesitate for a moment to acquit a wise and, in many respects, a virtuous prince of the odious charge of the foulest description of hypocrisy.

At the same time we are willing to admit that his conduct to the Christians was strictly in accordance with his interests; and it is very probable that the protection with which he distinguished them may in the first instance have originated in policy. But this is perfectly consistent with his subsequent conversion. And we may here remark that those who assign policy as his chief or only motive bear the strongest evidence to the power and real importance which the Church of Christ had acquired before his time; they attest that its stability had not been shaken by the sword of Diocletian; that by its own unassisted and increasing energy it had triumphed over the fury of the most determined of its persecutors; and that its claims on the justice and respect of the throne, though only urged by perseverance in suffering, could no longer be overlooked with safety. And this fact is of much greater historical importance than the motives or sincerity of any individual can possibly be.

Let us now proceed to ascertain what was the condition and constitution of the Church, as Constantine found it, what were the principal alterations introduced by him, and in what form and attitude he left it.

*Constitution of the Church.*—We have already described the free and independent constitution of the primitive Church; the bishops and teachers were chosen by the clergy and people; the bishop managed the ecclesiastical affairs of his diocese in council with the presbyters, and "with a due regard to the suffrages of the whole assembly of the people." Again, the great ecclesiastical divisions of the empire appear from the earliest period naturally to have followed the political; and thus for the regulation of matters relating to the interests of a whole province, whether they were religious controversies or the forms and rites of divine service, or other things of like moment, the bishops of the province assembled in council, and deliberated and legislated.

During the course of the third century this constitution was so far changed that the episcopal authority was greatly advanced, at the expense of that of the inferior ministers and the people. But in other respects the government of the Church remained in reality the same, and perhaps even in this respect it was apparently so; for the forms of the lesser or diocesan councils were still preserved, though the relative influence of the three parties composing them had undergone a change.

And here it will be proper to examine how far those are correct who consider the Church at that period as a separate republic or body-politic distinguished from the empire. In the first place, the synods which we have mentioned, local as well as provincial, assumed the office and power to arrange ecclesiastical affairs, and to punish ecclesiastical offences. But neither was their power acknowledged by the civil government, nor were their awards or censures enforced by it. Again,

the bishop, through an authority which professed to be derived from Scripture, and which may certainly be traced to the earliest age, exerted a kind of mediative interference throughout his diocese in the civil disputes of the Christians, to which they very frequently appealed and admitted his decisions as conclusive; but no such jurisdiction was recognized by the government, nor were any such decisions legally valid. Moreover, some of the churches had become possessed, as corporate bodies, of considerable property in land or buildings purchased from the common fund, and applied to the purposes of the society; but the government never formally acknowledged the legality of these acquisitions, and availed itself, as we have already seen, of the first pretext to confiscate them.

It is in this condition of ecclesiastical affairs that we may discover perhaps the earliest vestige of the distinction which will hereafter become so familiar to us, between spiritual and temporal power, though in the present indefinite shape and imperfect development of the former we can scarcely trace any intimation of its future proportion and magnitude. We perceive, also, on how strange and irregular a foundation the security of the early Church was established—in fact, to a statesman of those days, before the force of religious union and the intensity of religious attachment were generally known and understood, the society or communion which rested not on a political basis would naturally appear to possess no principle of stability. To the eye of a pagan its strength was imperceptible, as the elements which composed it were concealed from him; and it was this circumstance which encouraged Diocletian to an aggression of which the barbarity indeed shocked him, but of which he never, perhaps, doubted the success, since the power which resisted it was unseen and incomprehensible. In the mean time, the public discipline, which had been made necessary by the neglect of the civil power, was cemented and fortified by its opposition; and the private sincerity of belief, which could not be understood by a pagan, because paganism had nothing to do with truth, was animated into contumacy by the sense of injustice and injury.

To us, indeed, it seems nearly certain that those powerful but latent principles of ecclesiastical stability which repelled the assault of Diocletian would have preserved the Church through a much severer trial, if the genius of Constantine had not discovered its real strength, and courted its friendship and alliance. It is true that in becoming acquainted with its strength he also discovered its virtues; in the excellence of the Christian system, he perceived a great omen of its perpetuity; he saw too that, as a rule for civilized society, it was more efficient than any human law, because more powerful in its motives to obedience; and perhaps he remarked, also, that the energy of Christians had hitherto been confined to submission and endurance—to unoffending, unresisting perseverance—and this outward display of loyalty might lead him to overlook that free spirit which pervaded both the principles of the religion and the government of the Church, and which in later ages was so commonly found in opposition to despotism.

Constantine admired the morality of the Christians; he loved their submission to arbitrary power, and he respected that internal and advancing vigor which had triumphed over so many persecutors. These, we doubt not, were the motives which induced him to seek the alliance of the Church, and to confer on it advantages, not more substantial, perhaps, than those which he received from it.

We are disposed to divide the ecclesiastical life of Constantine into three periods. In the first of these he confined himself, at least ostensibly, to the impartial toleration of all religions, though he legally established that of the Christians. This extends from the Edict of Milan to the council of Nice in the year 325. His next occupation was to define the doctrines, and thus to preserve the unity, of the Church which he had established. It was not till the third and latest period of his life that he attacked the superstition of his forefathers by edicts directly leveled against paganism. Constantine found the Church an independent body, a kind of self-constituted commonwealth, which might sometimes be at peace and sometimes at variance with the civil government, but which was never acknowledged as any part of the whole body politic; it had a separate administration, separate laws, and frequently (through the perversity of its persecutors) separate interests also. The Christian, as a citizen of the empire, was subject of course to the universal statutes of the empire—as a member of the Church, he owed a distinct allegiance to the spiritual directors of the Church; and though this allegiance was never inconsistent with his civil obedience, except when that obedience would have deprived him of his religion, it was founded on more commanding motives, and was one from which no earthly authority was sufficient to absolve him. Thus far, and thus far only, his ecclesiastical divided him from his civil duties; to this extent they placed him, at all times, in divergence from the State, and, in times of persecution, in actual opposition to it. And so long as the Church which he honored was disclaimed as a part or associate of the State, so long as the space between them was broad and distinguishable, so long the limits of his allegiance to either were very clearly marked. Constantine comprehended the nature and perceived the inconveniences and the danger of this disunion; and he therefore employed the earliest exertion of his power and policy to acknowledge the existence, to consolidate the elements, to establish the authority and to diminish the independence of the Church. To accomplish the first of these three objects, he received that body into strict alliance with the State; to effect the last, he so received it as to constitute himself its director as well as its guardian, and to combine in his own person the highest ecclesiastical with the highest civil authority. His right to this authority (if he condescended to consider that point) he might derive with some plausibility from the original institutions of Rome. From the earliest ages of its history the chief magistrate of the nation had been entrusted with the superintendence of the national religion; and it seemed fair that he should impose the same as the condition of the establishment of Christianity. And yet a great distinction is to be observed even in this point. For according to the principles of polytheism, the most sacred functions of religion might be performed by the hands of the civil magistrates; but the consecration of a separate order to these purposes by the Christian system excluded the emperor from the administration of the rites of religion; and the prince and the priest became henceforward characters wholly distinct and independent. It was perhaps by this restriction that the first avowed and legal limitation was imposed upon the authority of the former; and it was not a trifling triumph to have obtained from the Roman emperor the acknowledgment of any right in a subject, or any restraint upon himself.

Notwithstanding this assumption of ecclesias-

tical supremacy by the emperor, the Church retained in many respects its separate existence, or at least the freedom of its autonomous constitution. Indeed, had not this been so, the term alliance, which is used to designate the union of Church and State under Constantine, as it implies a certain degree of independence in both parties, would be unmeaning and out of place. Some immediate advantages were also reaped by the Church; much that it had formerly held by sufferance it now possessed by law; many privileges which had hitherto existed through the connivance only or the ignorance of the government were now converted into rights, and as such confirmed and perpetuated.

Constantine divided the administration of the Church into, 1. Internal, and, 2. External.

1. The former continued, as heretofore, in the hands of the prelates, individually and in council; little or no alteration was introduced into this department, and it comprehended nearly everything which was really tangible and available in the power of the Church before its association with the State, now confirmed to it by that association. The settlement of religious controversies was recommended to the wisdom of the hierarchy; the forms of divine worship, the regulation of customary rites and ceremonies or the institution of new ones, the ordination and offices of the priesthood, which included the unrestrained right of public preaching and the formidable weapon of spiritual censure, were left to the exclusive direction of the Church. The freedom of episcopal election was not violated, and the bishops retained their power to convocate legislative synods twice a year in every diocese, uncontrolled by the civil magistrate. We have already mentioned that by the Edict of Milan the possessions of the Church were restored and its legal right to them for the first time acknowledged; and this act of justice was followed, in the year 321, by another edict which permitted all subjects to bequeath property to that body. Exemption from all civil offices was granted to the whole body of the clergy; and perhaps a more important privilege, about the same time conferred on the higher orders, was that of independent jurisdiction, even in capital charges, over their own members, so that the bishop alone, among the myriads of the subjects of the empire, enjoyed the right of being tried by his peers. This was not granted, however, with any intention of securing his impunity; for though degradation was the severest punishment which could be inflicted by a spiritual court, the penalty was liable to increase, after condemnation, by the interference of the secular authority. While we may consider the free trial of the bishops, in a political light, as another important inroad into the pure despotism of the imperial system, we are also assured that on the body thus exclusively possessing it it conferred no inconsiderable advantages. But another privilege, even more valuable than this, is traced with equal certainty to the legislation of Constantine. The arbitration of bishops in the civil differences referred to them in their diocese was now ratified by law, and their decisions, of which the validity had formerly depended on the consent of the parties, were henceforward enforced by the civil magistrate. On this foundation was imperceptibly established the vast and durable edifice of ecclesiastical jurisdiction; from this simple legalization of an ancient custom, in process of time, the most substantial portion of sacerdotal power proceeded, and the most extravagant pretensions of spiritual ambition. But these consequences convey no reflection

on the wisdom of Constantine, since they were produced by circumstances which he could not possibly foresee, and which, besides, never influenced, to any great extent, the eastern division of Christendom.

In the separate view which we have taken of the internal constitution of the Church we perceive a powerful, self-regulated body armed with very ample and extensive authority and supported, when such support was necessary, by the secular arm. Let us proceed to the second division.

2. The emperor assumed to himself the entire control of the external administration of the Church. It comprehended everything relating to the outward state and discipline of the Church, and was understood to include a certain degree of superintendence over such contests and debates as might arise among the ministers, of whatsoever rank, concerning their possessions, their reputation, their rights and privileges, as well as their political or other offences against the laws of the empire. Even the final decision of religious controversies was subjected to the discretion of judges appointed by the emperor; the same terminated any differences which might arise between the bishops and people, fixed the limits of the ecclesiastical provinces, took cognizance of the civil causes subsisting between ministers and lent his power to the execution of the punishment due to their criminal offences. And though the right of convoking local and provincial synods remained with the Church, that of assembling a general council was exercised only by the prince.

When we consider in succession these articles of imperial supremacy, we perceive, in the first place, that Constantine did not transfer to himself from the Church any power which had before belonged to it. Most of the cases there provided for must by necessity have always fallen under civil cognizance, for whenever it happened either that the external encroachments of the Church or the differences among Christians or their ministers proceeded to endanger public tranquillity, such offences fell, of course, under the cognizance of the secular, which was then the only acknowledged, jurisdiction.

There appear, indeed, to be two cases in which the emperor assumed a power not before belonging to the State—interference for the arrangement of religious controversies by the appointment of judges and the convocation of general councils. Respecting the first of these—which proved indeed the least effectual part of his ecclesiastical authority—it was not probable that the emperor would be anxious to exert it unless called upon to undertake the office by one or both of the parties in controversy.

We should not omit, also, to mention some changes at that time introduced into the titles and gradations of the hierarchy, in order to associate their administration more intimately with that of the civil officers. To the three prelates of Rome, Antioch and Alexandria, who enjoyed a certain degree of pre-eminence in the Church, was added the patriarch of Constantinople; these four corresponded with the four pretorian prefects then also created. After these followed the exarchs, who had the inspection over several provinces and answered to the appointment of certain civil officers of the same name. The metropolitans had the government of one province only, and under them were the archbishops, whose inspection was confined to certain districts. The bishops were the lowest in this gradation, but many of them possessed ample extent of authority

and jurisdiction. Their number at this time was one thousand eight hundred, of whom a thousand administered the Eastern, eight hundred the Western, Church. In this whole body the bishop of Rome possessed a certain indeterminate precedence or pre-eminence, unattended by any authority; and this precedence is attributed, first, to the imperial name of Rome, and next to the superiority in wealth which he seems to have acquired at a very early period; to the splendor and extent of his religious administration, and the influence naturally arising from these causes.

The simple establishment of the Church, such as we have now described it, without anticipating the measures of State afterward applied, or misapplied, to the support of it, was favorable not only to the progress of Christianity, but also to the concord of Christians; the former has never been disputed; as to the latter, we have seen by what a cloud of heresies the religion was overshadowed before its establishment; and no one can reasonably doubt that the additional sanction given to the gospel by imperial adoption, and the greater dignity and influence and actual power thus acquired by its regular ministers in every province of the empire, would conduce to dissolve and disperse them.

While this is no doubt true, still the prosperity of the Church was unquestionably followed by an increase in the number and rankness of its corruptions. But unhappily we have already had occasion to observe that several abuses had taken root in all its departments during at least that century which immediately preceded the reign of Constantine; to the fourth we may undoubtedly assign the extravagant honors paid to martyrs, and the shameful superstitions which arose from them. But we should also recollect that many among the Romish corruptions are of a much later date, and that several may be directly referred to the influence of expiring paganism, not to the gratuitous invention of a wealthy and degenerate priesthood. Indeed, we should add that, in respect to the moral character of the clergy of the fourth century, they seem rather chargeable with the narrow, contentious, sectarian spirit which was encouraged and inflamed by the capricious interference of the civil power than with any flagrant deficiency in piety and sanctity of life.

Christianity, thus sanctioned by the civil power and sustained by the State, had still to encounter opposition. The Arian controversy raged for a long time; other heresies appeared and distracted the Church; the power of the Romish bishop was steadily increased, until at length his claim of supremacy was openly urged. The theology of the Church became more and more clouded, and discipline fell into disuse. Eventually the power of Rome became supreme, and that power was used relentlessly to exterminate those who held to the simple doctrines of the word of God. Effort after effort was made to secure a reformation, and eventually, in the beginning of the sixteenth century, the Germans by a vigorous effort took the work into their own hands.

An idea of the course of the Church during the lapse of ages may be gathered from a study of the subjects which were discussed in the great ecclesiastical councils which met in different ages, and the following essay will give the reader a condensed view of the work of these councils, closing with the last memorable synod, known as the Vatican Council, which met in Rome in 1869 under the auspices of the present pope, Pius IX.

### General or Œcumenical Councils.

It has been held by some modern writers that councils or synods commenced in Greece about the middle of the second century. The probability is that this opinion is based on a misinterpretation of a passage in the writings of Tertullian, but as soon as the history of the Church can be traced by the aid of reliable documentary evidence we find councils in operation all over the Roman empire; and there is every reason to believe that they originated in the days of the apostles. Following the example of the early synod which met at Jerusalem, as recorded in the fifteenth chapter of the Acts of the Apostles, when difficulties arose on the subject of either discipline or doctrine in the primitive Church, it seemed to be an obvious expedient that an assembly of the great teachers and rulers in the churches should meet and determine the course to be pursued. At first they met in private and on a very limited scale; but as persecution subsided they assembled more openly, and immediately after the promulgation of the edict of toleration by the emperor Gallienus (A. D. 260), bishops or pastors of churches from distant countries were seen sitting together in large ecclesiastical judicatories; and according to Eusebius, the Council of Antioch, in A. D. 269, which deposed the famous Paul of Samosata, was attended by some bishops from remote provinces. Considerable difficulty exists in determining the number of ecclesiastical councils which should be recognized as Œcumenical or general. The title Œcumenical is met with for the first time in the sixth canon of the first Council of Constantinople, but the propriety of the title is certainly not very obvious. According to Bellarmine, general councils are those assemblies in which the bishops of the whole world should be present unless they are lawfully hindered, and in which no one presides except the chief pontiff or some one else in his name; hence they are called Œcumenical because they are councils of the whole world. (De concil. et Eccl. i. 4.) It is obvious that in this definition there are terms which are so indefinite that no ingenuity could interpret them so as to secure a general acquiescence in the decision; and an appeal to the facts connected with the various great synods which have been held by no means diminishes the number of the difficulties. Beginning with the Council of Nice and ending with the Council of the Vatican, it is notorious that the synods which have claimed the title of general have not been particularly distinguished by the authority under which they acted, by the multitude, learning and piety of their members, nor by the magnitude of the churches over which they exercised jurisdiction. It is a matter of fact that the more ancient councils known as Œcumenical were all convened by the Roman emperor, the head of the State, and by no acknowledged chief ruler in the Church. Then again it is equally well known that similar assemblies, brought together under the same auspices, even though more largely attended, have not been honored with the same designation. In the latter class stand the councils of Arles, of Sardica and of Rimini; and yet at Rimini there were at least four hundred bishops, while other accounts say one thousand members took part in the proceedings.

Hence it is not a matter of surprise that a difference of judgment should exist as to the numbers of the Church synods which should be acknowledged as general. Bellarmine, who is a leading authority in the Roman Church, recognizes eighteen general councils, and to these must now be

added the Vatican Council of 1869. Hefele, who stands in the front rank of the modern scholars of the Romish Church, acknowledges nineteen, and to these must now be added the Vatican Council. His list includes: 1st. The first Council of Nice, A. D. 325. 2d. The first Constantinople, A. D. 381. 3d. Ephesus, A. D. 431. 4th. Chalcedon, A. D. 451. 5th. The second Constantinople, A. D. 553. 6th. The third Constantinople, A. D. 680. 7th. The second Nice, A. D. 787. 8th. The fourth Constantinople, A. D. 869. 9th. The first Lateran, A. D. 1123. 10th. The second Lateran, A. D. 1139. 11th. The third Lateran, A. D. 1179. 12th. The fourth Lateran, A. D. 1215. 13th. The first Lyons, A. D. 1245. 14th. The second Lyons, A. D. 1274. 15th. Vienne, A. D. 1311. 16th. Constance, A. D. 1414-18. 17th. Basil and Florence, A. D. 1431-42. 18th. The fifth Lateran, A. D. 1512-17. 19th. Trent, A. D. 1545-63. Bellarmine and Hefele agree as to the character of the first fifteen in the list, but Bellarmine omits Constance and Basil, as might be expected from the character of his ecclesiastical views and the proceedings of those assemblies, but still he acknowledges the Council of Florence.

The first seven general councils, which are also acknowledged by the Greek Church as Œcumenical, all met in the East; and among the three hundred and eighteen members who are usually reported as having been present at the first Council of Nice, only eight or nine can be discovered who belonged to the Western empire. According to Stanley (Eastern Church), Hosius, of Corduba, Cæcilian, of Carthage, Marcus, of Calabria, Nicæus, of Dijon, Domnus, of Stridon in Pannonia, and Victor and Vicentius, who were Roman presbyters, were present and took part in the proceedings of the council. While three hundred and eighteen members have usually been recognized as constituting this council, the signatures of two hundred and twenty-five can only be determined, and of these at least fifteen belonged to the class of the "Chorepiscopi." Eusebius speaks of them as more than two hundred and fifty, while Athanasius, who was present, says that they numbered "more than three hundred." Such is the uncertainty which hangs over the constitution of this most celebrated assembly—a council which had so much to do in determining one of the fundamental doctrines of the faith of the Church. The first Council of Constantinople was attended by but one bishop from the Western Church, and other synods recognized as Œcumenical had only two or three, or at least an unimportant representation of the Western Church. The more ancient councils were all convened by the Roman emperor, and often the Roman bishop had not even been consulted before the calling of these early councils; and it is notorious that certain of their decisions gave him intense dissatisfaction; but when their doctrinal decrees met with the approval of the church over which he presided, their deliverances were taken under his patronage, and they were recognized as influential in the settlement of the theological controversies.

As the early general councils were convened by the temporal sovereigns, so the expenses of the ecclesiastical legislators were defrayed out of his treasury; and when the Fathers journeyed to the scene of conference, the public conveyances were placed at their service. The wits of those ages amused their contemporaries by describing the movements of the clerical travelers, relating how the imperial establishments were unable to provide for their accommodation, how dignitaries, in their haste to be present in due time, galloped

furiously along the great Roman roads, and how horses and mules were injured by their clerical riders. These assemblies were very unequally attended, for in the fourth general council, held at Chalcedon in A. D. 451, there were six hundred and thirty members present, or about twice as many as made up the important Council of Nice, while the second, which met at Constantinople in A. D. 381, had only one hundred and fifty members; and the third, at Ephesus in A. D. 431, contained not more than two hundred. The fifth and sixth general councils, held respectively in A. D. 553 and A. D. 680, were attended each by about one hundred and sixty members. It is impossible to tell in what way the right to sit in either the first Council of Nice or the first Council of Constantinople was determined, nor can it be known how many were summoned to attend, but who failed to appear. At any rate, it is almost certain that the emperor acted according to his judgment, but to later synods some were specially summoned on account of their eminent theological reputation; and an illustration may be given by the case of Augustine, who was called to attend at Ephesus, but his death prevented him from reaching the council. Before the third general council, the emperor Theodosius the Younger issued a circular letter, in which he required each metropolitan to bring with him as many bishops as he deemed expedient, and the result was that great complaints were made that an undue proportion of members from the neighborhood of Ephesus were introduced into the assembly. As there were one hundred and eighteen provinces in the eastern and western sections of the empire, and metropolitans held sway in many of them, it is obvious, as the numbers in attendance may show, that the Christian Church as a whole was very inadequately represented in most of the general councils. Then, again, in the days of Constantine and Theodosius, there did not exist those facilities for travel which would have enabled ecclesiastics from distant and secluded places to attend. On the lines of the great Roman roads it was possible to travel, but in regions which had not been opened up and controlled by the presence of the legions, intercourse and locomotion from place to place were effected only by great expenditure of time and means. Hence it came to pass that as few bishops were willing to encounter the fatigue and inconvenience of a long journey to a distant city, those only who were specially excited or interested in the controversies of the day undertook the toil, and hence it often came to pass that a large proportion of those who took part in these convocations resided not far from the place of meeting.

The general councils did not always hold their sessions in houses of worship. Some of them, including the first Council of Nice, assembled for deliberation in a spacious chamber of the imperial residence; but the business even of the provincial synods soon began to be conducted with considerable form and ceremony. The oldest bishop occupied a place near the presiding officer, and the members sat around their chief, according to seniority, in the form of a semicircle. In Œcumenical councils there was even greater ceremony, as the exalted members, such as metropolitans and patriarchs, when these dignitaries came into existence, claimed peculiar distinction. At the Council of Nice each member had a seat assigned to him, "according," as Eusebius has said, "to his rank," and thus Constantine may have managed to settle

without disturbance the claims of metropolitans for precedence. The meetings were opened by a prayer, and a copy of the Gospels was placed on an elevated pedestal or throne, in the middle of the audience, to remind the members that the word of God was the great arbiter in all questions of faith and duty, and supreme in authority. A copy has been preserved of the prayer which was used at the opening of these assemblies, and it is a memorable fact that it was read at the opening of the Vatican Council in 1869. Such a venerable document is clothed with no ordinary interest, and it is here presented entire, in order that the reader may understand the spirit of that devotion which prevailed in the Church at an early age. It is as follows: "We are here, Holy Spirit, we are here; kept away from thee, indeed, by the exceeding greatness of sin, but brought together specially in thy name; come to us, be present with us, and deign to flow into our hearts; teach us what we should do, show us the way in which we should walk, work in us what we should perform. O thou who supremely lovest equity, suffer us not to be the overthrowers of justice. Let not ignorance draw us to the left hand, let not favor lead us from the right path, let not the consideration of reward or of persons corrupt us, but join us effectually to thyself by the gift of thy grace alone. Let us be one in thee, and in nothing let us deviate from the truth. As we are collected in thy name, so in all things let us hold fast that which is right with well-regulated purity, that our mind may differ from thee in nothing, and that we may hereafter, for acts well done, obtain eternal rewards. Amen." This prayer has been preserved in the works of Isidore Mercator and in the Pontificale Romanum, and it is well that a copy of such an interesting document should be placed in the hands of English readers who may not have access to the records of past ages. As the power of the Roman Church extended, and the claims of the Roman pontiff became imperious, his right to preside, either in person or by a deputy, in these assemblies was asserted. Even as early as the fourth century these claims were put forth, and yet it is notorious that the Roman bishop was not present at any of the earlier councils. The age and infirmities of Sylvester, the bishop of Rome, were assigned as the reason for his absence from the Council of Nice, but while two of his presbyters were present, they only occupied a secondary position. It appears that in the ordinary proceedings of the council they are represented as subscribing immediately after Hosius, the bishop of Corduba, who was a Western ecclesiastic, but it is alleged that they originally occupied only a fourth place of rank in the council, showing that in A. D. 325 the supremacy of the Roman bishop over the whole Church, and the corresponding dignity and reverence which must be inseparable from such elevated office, were unknown.

At the opening of the second general council, Meletius, bishop of Antioch, presided, and Cyril of Alexandria presided at the third. Then again in several cases a number of individuals presided jointly; and at Chalcedon, in A. D. 451, the deputies of the Roman prelate sat for the first time, but only as assessors with others; and as these assessors could not speak Greek, they were obliged to communicate with the councils by means of an interpreter.

Such was the general character of these great ecclesiastical assemblies, in which many of the leading men of their age took a part, but in which

it must be acknowledged they had associated with them many who, by education, mental power and independence of character, were unfit to be the leaders of the world, the reformers of society or the defenders of the faith once delivered to the saints. There are certain of the great councils which stand out in bold relief in ecclesiastical history, and which demand a notice of the circumstances in which they were held, and of the decisions at which they arrived. The proceedings of the assembly at Jerusalem which ruled the action of the Church in the admission of Gentile members gave form to the Church, and established the fact that the framework of Judaism was taken down, like a scaffold around a building, which is removed when the edifice is completed in all its fair proportions, as it is no longer useful; so Judaism with its limits and circumscribing restraints was laid aside, and the deposit of the faith was now avowed to be the heritage of all the nations.

The work of evangelization accordingly went on, and the gospel soon came into contact with the philosophies of the East and the West. The ardent and restless mind of the Greeks took up and discussed all problems connected with God, sin, salvation, the Saviour, his person and his work. As might have been expected, the intellectual activity of the Eastern mind, while the faith of the Church was being clearly defined and accurately guarded, went off into speculations which soon led away from the truth. Controversies arose; one dialectician opposed another; authority of one eminent man was cited against the teaching of another; and eventually the feeling became widely spread that such an assembly could be convened as would really give expression to the actual faith of the Church. By this time Egypt had become the great battle-field of controversy. In Syria and other places in the East there were teachers who sympathized with the leaders of Egypt in their rejection of the theology which had been handed down from the apostolic age, and thus it came to pass that the Council of Nice was summoned in A. D. 325 to determine a cardinal doctrine of the Christian faith. In some respects this assembly was distinguished above all the other general councils. Never was an ecclesiastical judicatory convened under circumstances more interesting. The fundamental doctrine of the supreme deity of Christ had been assailed, the views so boldly and acutely promulgated by Arius of Alexandria had been embraced by many; they were spreading, and the discussions on this vital point were disturbing almost the whole Eastern Church; and the Fathers of the Christian commonwealth assembled to settle the controversy by proclaiming the actual faith of the Church. Many of the members of the council were far advanced in age. They were venerable men, whose steadfastness to the truth and whose love of the Saviour had been well attested in days of fiery trial when persecution raged, for many of them had suffered for the faith. In one part of the assembly might have been seen a bishop who had lost the use of his hands during the Diocletian persecution; elsewhere others were sitting who could have uncovered their persons and exhibited the marks left by cruel tortures; here and there were venerable pastors who had been "confessors" whose right eyes had been dug out by the hands of brutal heathen persecutors, and whose countenances were thus horribly disfigured. Some entered the assembly lame and halting in their gait, for they had been consigned to slavery in deep mines, and their limbs had been maimed to pre-

vent them from escaping, and now they were assembled in this great convocation to bear their testimony to the glory of the Person who had made them worthy to suffer for his name. What a spectacle did they now behold! Their religion had been a forbidden and a despised thing. They themselves and their brethren had been treated as the offscouring of the earth; they had lain immured in noisome dungeons, where life was ebbing away, and now they found themselves in a palace. Their scars and mutilations, once marks of scorn and ignominy, were now badges of honor. They could vividly recall the time when terror reigned, and when the approach of a band of soldiers would have thrown a whole assembly into consternation; but now, on a gilded seat in the midst of them, clothed with scarlet shoes and a purple robe, sparkling with jewels, sat the great emperor himself whose sceptre swayed the doctrines of all civilization, taking a kindly interest in their debates, whilst his guards were at hand to protect them from all annoyance. It is worthy of note that, though as yet Constantine was not baptized, he took part in the proceedings, and on some occasions he even acted as chairman of this ecumenical council. Hosius of Corduba (now Cordova), in Spain, was the confidential spiritual adviser of Constantine, and he acted as the ordinary president. His name stands at the head of the members who subscribed the creed which was adopted by the council. With a view to aid the claim of the Roman bishop to supremacy, it has been asserted that Hosius represented the bishop of Rome, but to this it may be replied that not only does no writer of the fourth century say so, and that there is no evidence to support the assertion, but, on the other hand, Hosius was made president by Constantine himself, because of the high regard which the emperor had for him; and it is held by some that this regard arose from the fact that Hosius was the person by whose influence Constantine was converted to Christianity. The influence of Hosius must have been exceedingly great, for Athanasius expressly calls him "the president of councils," as he presided both at Nice and Sardica.

The meeting of this first general council virtually celebrated the recognition of the gospel by the first Christian emperor. The attention of men of all ranks throughout the Roman world was attracted to the great assembly; scholars, philosophers and statesmen mingled in the crowd of onlookers; and there was a universal feeling that a spiritual revolution of portentous significance had just been accomplished. Constantine now deeply pledged his imperial power to the support of his adopted creed; and the system of embracing religious uniformity by civil pains and penalties was immediately inaugurated. An idea prevailed in the ancient Church that, whilst matters of discipline might be decided by a majority of suffrages, questions of faith should be settled unanimously, and the attempt to carry out this principle strictly led not unfrequently to harsh and violent proceedings. Even the Fathers at Trent, in the sixteenth century, are found appealing to this principle, as Father Paul attests, but it is notorious that in the Vatican Council of 1869 it was ignored. Unanimity was sometimes secured, as at Nice, by depositing or banishing dissentient members, and sometimes it was brought about by bribing the venal and overawing the timid. The aid of the State was often employed to reduce the hesitating or refractory to submission. The civil magistrate did not give his patronage and aid for

nothing. His ecclesiastical influence was felt to be very formidable; he convened synods when and where he pleased, intermeddled with their deliberations, and treated refractory bishops in a spirit of willful tyranny. None of the canons of the early councils were considered valid until they had received his sanction; and when thus confirmed, they had all the authority of the other laws of the empire.

There are said to have assembled at this council about three hundred bishops, chiefly those of the eastern part of the empire, and among them were Arius, Alexander and his friends, Athanasius and Macellus, the latter being bishop of Ancyra. Eusebius of Nicomedia was the great supporter of Arius. Although Hosius is usually considered to have been the president, yet doubt has been cast on this point, and it is not even known how long the council sat—some say but six weeks, others two months, and some even hold that it extended to two years, but the more general opinion inclines to the shorter term. Basnage reckons it sat from June 19th until July 25th, a period of six weeks; but the balance of opinion extends the sitting until August 25th, making the period two months.

There were three grand questions debated, viz.: I. The Arian controversy; II. The time of keeping Easter; III. The Meletian schism; and all that remains of this great council is the creed called the "Nicene Creed," the "Synodical Epistle" and "Twenty Canons." Constantine threatened banishment to all who would not sign the decrees of the council; and it is stated that all the bishops, whether orthodox or Arian, excepting Secundus, the bishop of Ptolemais, and Theonas of Marmorea, both in Egypt, signed the creed. Milner in his Church History says: "The minority at first refused to subscribe; but being advised to yield at length through Constantia, their patroness, the emperor's sister, they consented. But by the omission of a single letter, they reserved to themselves their own sense, subscribing not that the Son is the same, but only a like essence, with the Father," and he adds in a note that "it is remarkable that this duplicity of theirs is actually recorded by Philostorgius, an Arian historian." All who refused obedience to the decrees were to be sent into exile; Eusebius, bishop of Nicomedia, and Theognis, bishop of Nice, incurred this punishment. In respect of Arius, the council came to the resolution that "the Son of God was begotten, not made of the same substance with the Father, and of the same essence with him" (that is, in Greek, "homousios," the same essence, and not "homoiousios," like essence). Arius and his followers were excommunicated, deposed, and banished to Illyria.

Sozomen adds: "The emperor banished Arius, and published an edict that Arius and his followers should be esteemed impious; that wherever any of his writings were found they should be burned; and that if, after this, any were detected concealing his books, they should be liable to death." Socrates says further that by the same edict Arius and his followers were to be called Porphyrans, as having deserved the same brand of infamy that had been affixed on Porphyry for his venomous writings against Christianity. Arius remained in Illyria three years, when Constantine was persuaded to believe that his tenets were not really different from those established by the Council of Nice, and the emperor therefore recalled him from exile, and in A. D. 330 he was permitted to return to Alexandria. Athanasius, who had succeeded to the bishopric, refused to re-

ceive him into communion with the Church, upon which Eusebius of Nicomedia, the friend of Arius, who had obtained great influence over Constantine, succeeded in securing the banishment of those bishops who had refused to hold fellowship with the recalled bishops. He succeeded also in calling a synod at Tyre, and here Athanasius was deposed, while in another synod at Jerusalem the excommunication of Arius was removed. Still farther, Athanasius, who had been bishop of Alexandria from A. D. 326, was banished to Gaul in A. D. 335. The cause of Arius now seemed to be in the ascendant, and he went to Constantinople, where, by order of the emperor, Alexander, the bishop, was enjoined to admit him to the communion. The constancy of Alexander was put to a severe test, and all awaited the event with excited feelings, but on the Sunday, while attended by a concourse of his friends on his way to the church, Arius suddenly fell down dead.

The decision of the council was adhered to by the Western Church, but the opposite side was maintained by the Eastern bishops, and thus the contention and strife of Eastern and Western Christianity continued to prevail.

In respect to the keeping of Easter, it was determined by this council that it should be observed by all churches on the Sunday which followed immediately after the fourteenth day of the moon that came after the vernal equinox, which happened that year on the twenty-first day of March. Then, to prevent all future strife, it was ruled—I. That the twenty-first day of March shall be accounted the vernal equinox. II. That the full moon happening upon or next after the twenty-first day of March shall be taken for the full moon of Nisan. III. That the Lord's day next following that full moon be Easter day. IV. But if the full moon happen upon a Sunday, Easter day shall be the Sunday after. It is well known that the early British churches did not follow this method. They held to the Eastern mode; and when Augustine came into Britain, one of his objects was to induce the British clergy "to celebrate Easter at the proper time." According to Bede, Colman, an Irish bishop, said at the memorable synod held at Whitby, in Yorkshire, A. D. 664, "The Easter which I celebrate I have received from my ancestors, and it is the same as that which St. John the evangelist observed, with all the churches over which he presided." In respect to the Meletian controversy, it was condemned by the council, and it was decided that Meletius should reside in his own city, but without authority. The chief decrees of this council were those which required—(a) subscription to the Nicene Creed, under pain of banishment; (b) the condemnation of Arius; (c) the condemnation of Meletius; (d) the rule respecting Easter; (e) the rebaptizing of the lapsed declared unnecessary; (f) the jurisdiction of the greater bishops defined; (g) deacons not to receive the eucharist before bishops or presbyters; (h) the followers of Paul of Samosata to be rebaptized on returning to the Church, as they had not been baptized in the name of the Trinity.

Thus concluded the first general council, the most celebrated since the time of the apostles. The settlement of the questions which were decided by the theologians of Nice involved various other doctrines which occupied the succeeding general councils of the fourth, fifth, sixth and seventh centuries. They were engaged in the settlement of points which have ever since been held as essentials in the Christian faith. The

first Council of Constantinople, in A. D. 381, followed up the deliverance of the Council of Nice by asserting the personality and Godhead of the Holy Spirit in opposition to the views which had been proclaimed that the Holy Spirit was only an attribute of the Deity; that as power, wisdom and goodness in the Deity are only attributes or powers which inhere in the great first cause, so the Holy Spirit is merely that spirit or quality of holiness which belongs to God essentially in opposition to moral evil. As Sabellius had taught that there was but one person in the Godhead, the Father, Son and Holy Ghost being the same, as man is composed of body, soul and spirit, and is yet but one person, so is it with God. The council asserted the faith of the Church in opposition to these heretical views. Photinus of Sirmium had been a supporter of Athanasius, but he gradually fell off toward Sabellian views, and his followers were also condemned by this council. The same course had also been followed by Marcellus of Ancyra, who also in former years had advocated the course of Athanasius, and the council placed him and other errorists in the same category of condemnation. In the beginning of the fifth century the system afterward known as the Nestorian was attracting great attention, and in A. D. 431 the memorable Council of Ephesus, which was called by Theodosius the Younger, dealt with this heresy, and still more definitely settled the doctrine of the perfect deity and the perfect humanity of Christ by affirming his existence as one person in two natures.

Eutyches was an abbot of a monastery near the Eastern capital. He was a decided opponent of Nestorius; but owing to a partisan conspiracy which aimed at placing him in the see of Constantinople, he was charged with heresy by a bishop named Eusebius, at a synod held A. D. 448, at Constantinople. At first he refused to leave his cloister, but at length he consented to attend the synod. An imperial officer and an escort of monks and soldiers accompanied him, and in reply to his interrogators he refused to say more than that "he did not permit himself to wish to comprehend the essence of the Lord of heaven and earth;" but being more closely pressed, he admitted his belief of *only one nature* in the Saviour. The body of Christ, as was well known, had been usually designated by him *the body of God*; and when questioned on this subject, he admitted that it was not the same substance as other human bodies. Being a presbyter as well as an abbot, and refusing to renounce his views, he was deposed from both these dignities and excommunicated. Eutyches was not to be put down by such a sentence. He had an immense body of followers on whom he could rely, and after failing to obtain a new trial, he appealed to a higher tribunal. The interference of Theodosius II. was secured, and a council was summoned to meet at Ephesus, in A. D. 449, to pronounce a decision on his views. This assembly has been known as the "Robber Synod," from the fraud and violence which characterized it, and it justly holds a bad pre-eminence among ecclesiastical assemblies. The procedure of its members is worthy of note, inasmuch as their character and conduct may serve to show the condition into which the Church of God would soon and certainly be brought if the faith and discipline of the followers of the Saviour were to be regulated, not by his own most precious word, but by the hostile jealousies and furious partisanship of angry men. The president of this council was Dioscorus, the

successor of Cyril in the see of Alexandria. In point of intellect he was much inferior to his predecessor; but he had equal ambition and far greater recklessness. The proceedings were conducted without much regard to law, precedent or order, and at times even decency seemed to be put aside, for at times the council presented the appearance of a meeting of hostile political factions instead of a grave Christian judicatory. When a report was read stating that at the Synod of Constantinople Bishop Eusebius had asked Eutyches whether he acknowledged the doctrine of the two natures the uproar reached a climax. "Away with Eusebius!" shouted the reverend judges. "Banish Eusebius! Let him be burned alive! As he cuts asunder the two natures in Christ, so let him be cut asunder!" All the members were not, however, prepared to join in this outcry. There were some who were utterly opposed to the views of Eutyches, and means were resorted to in order to compel them to concur with the rest of the assembly. Outside the church a mob kept up a system of intimidation; for a whole day the bishops were shut up within its walls; soldiers and ruffianly men were introduced into the church itself and placed on benches behind those members whose firm opposition was dreaded, and votes were thus extorted by the influence of terror. Flavian, the bishop of Constantinople, is said to have received all manner of insults, and even blows, from the furious Dioscorus; and an abbot named Barsumas, a Syrian, who had been admitted to represent the monks, is reported to have shouted, "Strike him! strike him dead!" as the president was engaged in the disgraceful exercise of beating and kicking his brother-patriarch. There is no doubt whatever but that Flavian died a few days afterward in consequence of the bodily and mental sufferings which he endured at this disreputable synod. All the proceedings of this second Council of Ephesus were dictated by its tyrannical chairman. Eutyches was acquitted of heresy and restored to his former position as a presbyter and abbot; Flavian—so soon to close his earthly course—was deposed from the patriarchal dignity; and Eusebius was also degraded. It only remained that these decisions should be dignified by an imperial edict, and this honor was not long wanting.

The triumph of Eutyches, after his success at Constantinople, was short. Leo I., distinguished from all his successors of the same name by the title of the Great, now filled the episcopal see at Rome; and never before had it been occupied by a prelate of so lofty pretensions, of such address, eloquence and political ability. The Western empire was now tottering to its fall, and just as the civil power diminished so did the spiritual rise into the ascendant, for the civil ruler had often to lean on the aid of the Church, and he soon had to submit to the dictation of its most influential functionary. Leo saw his advantage, for he had no fears of successful opposition to his claims for pre-eminence, as the bishop of Constantinople was engaged in a deadly struggle with the bishop of Alexandria, and his object was to secure a reference to himself for aid by each of the contending dignitaries. A general council was proposed after the scandalous proceedings at Ephesus, and Flavian, knowing the feeling in the East, wrote to Leo deprecating such a course. The reply of Leo was most masterly. He claimed that as bishop of the apostolic see he had a right to state the faith of the Church, and accordingly he set forth the doctrine of one person in two distinct natures, declaring that the eccle-

siastical belligerents were bound to submit to his decision; and hence, as he had really decided the case, a general council was not needed.

Flavian was puzzled; for although the doctrinal views of Leo accorded with his own, the decision of the Roman bishop, if acceded to, would have compromised the dignity and prerogatives of his own see; but he was delivered from this alternative by the fact that circumstances forced on the second Council of Ephesus, and here the feeling of the bishops toward Leo and his claims of supremacy were very clearly and distinctly made known. An attempt to read the letter of Leo was made, and set aside on the plea that other official documents were of more importance and deserved precedence. Nay, more, the legates of the pope who appeared on the occasion were treated with marked indignity; and one of them who conveyed the earliest intelligence of the proceedings to Rome escaped with difficulty from Ephesus. Hence it became the policy of Leo to have the proceedings of this "Robber Synod," as he termed it, set aside as speedily as possible.

The Italian dignitary had not long to wait for an opportunity to deal as he desired with these Eastern heretics and rejecters of his claims. Anatolius had succeeded to the see of Constantinople, and it was considered desirable that he should be acknowledged in the Western Church. Leo was applied to for this purpose, but he refused until Anatolius would condemn the errors of Eutyches and Nestorius; and among other demands was the significant one that he should subscribe to the letter which Leo had sent to Flavian. The agents of Leo at Constantinople managed the cause of their principal with consummate address, and political circumstances were developed which overthrew the supporters of the party of Eutyches, and Marcion, the new emperor, inaugurated an ecclesiastical revolution, and by his authority one of the most influential of all the early councils was called in A. D. 451. It assembled at Chalcedon, and six hundred and thirty bishops attended. The council deposed Dioscorus of Alexandria, condemned Eutychianism and adopted the letter of Leo to Flavian as a symbol of orthodoxy. The council also affirmed that Christ is true God and true man; that he was like us in all things, yet without sin; that according to his divinity he was begotten from all eternity and equal to the Father; that according to his humanity he was born of Mary the Virgin and mother of God; and that he has two natures unmixed and unchanged, undivided and not separated, the distinction of natures being by no means taken away by their union. This action was very decided, but yet it did not give peace to the Church. Its decrees were opposed by many, especially in Palestine and Egypt, and the recusants, who were called Monophysites, or believers in one nature, and who are still represented by the Copts, became separatists from the Church. For many years these malcontents continued to create much political disturbance, and at length, in A. D. 482, the emperor Zeno issued an edict of union (the Henoticon) by which he hoped to put an end to the controversy. The title of this act is a Greek word, "Henotikon" signifying uniting or making one. It contained no recognition of the Council of Chalcedon; it adopts the creed sanctioned at Constantinople in A. D. 381, and condemns Nestorians and Eutychians. It obtained the approval of the patriarchs of Constantinople, Alexandria and Antioch; but the bishop of Rome, on the plea that it involved an unholy compromise, gave it the most determined opposition, and

in consequence a schism arose in A. D. 484 which divided the Eastern and Western Churches for thirty-five years.

A calm study of the canons of the early general councils will suffice to reveal the fallibility of these assemblies. No enlightened student of Scripture would venture to anathematize every one who hesitates to call Mary "the mother of God," and yet the general Council of Ephesus was guilty of this folly. The Council of Chalcedon endorsed the system of monasticism, and even the Council of Nice sanctioned the division of the congregation into auditors, prostrators, co-standers and communicants. The auditors were penitents required to withdraw from the church when they heard the Scriptures read and the sermon preached; the prostrators remained behind, and knelt or fell prostrate as prayer was being offered for themselves; and the co-standers, who had nearly finished their course of penance, stood at prayer along with the faithful, but were not permitted to partake of the eucharist. Each class occupied a certain place in the house of worship; and according to the decision of the Nicene fathers, in the eleventh canon, the lapsed were to remain three years among the auditors, seven among the prostrators and two among the co-standers. The great danger of such minute legislation is apparent, and the wisdom of any council may be questioned which for twelve years would exclude from the sacraments of the Church a person who had given satisfactory evidences of repentance and steadfast reformation. It was the rigor of these enactments which led bishops to begin the system of indulgences, by which they aimed at relaxing such extreme severity, and the expedient soon carried the clergy into the most grievous abuses, the scandals of which in the sixteenth century in Germany hastened on the desire for reformation. In its zeal for religious uniformity the Council of Nice condescended to legislate respecting the posture of the worshippers on the Lord's day. In the twentieth canon, "That all things may be done uniformly in every parish, the holy synod decrees that all should offer up their prayers to God standing;" and it is somewhat remarkable that among Western Christians those denominations which reject a prelatical order are almost alone in observing this form of worship.

The assembly at Nice contained a larger proportion of pastors eminent for piety than any of these general synods; but though its proceedings have been imperfectly recorded, there is abundant evidence that its members too frequently betrayed indications of human infirmity. As soon as the bishops reached the place of destination they began to criminate each other, and their very first public meeting was a war of angry personalities. The theological belligerents wrote down their mutual accusations and addressed them to the emperor; but Constantine wisely refused to read the parchment rolls, and threw them all into the fire. According to tradition, the disputants sometimes acted with the utmost violence; for when Arius was propounding his sentiments, an orthodox Father is said to have been so provoked by what he deemed impudent blasphemy of the heresiarch that he started up and struck him on the jaw. Tradition has recorded the name of Nicholas of Myra in connection with this zeal for orthodoxy, but on the other hand there are doubts as to his presence at the council. The next general council, the first of Constantinople, was probably disfigured by quite as many scenes of uproar. Gregory Nazianzen, who presided over a portion

of its deliberations, compared its members to wasps and magpies—to a flight of cranes and to a flock of geese. The next two general councils, those of Ephesus and Chalcedon, were still more disorderly; and it has been clearly proved that those who prevailed at the former of these synods secured their ascendancy by physical force, intrigue, bribery and courtly influence. The emperor Theodosius the Younger addressed to the Fathers of Ephesus, immediately before their separation, a rebuke memorable for its caustic severity. "God is my witness," he declared, "that I am not the author of this confusion. His providence will discern and punish the guilty. Return to your provinces, and may your private virtues repair the mischief and scandal of your meeting." The business of the Council of Chalcedon was completely interrupted when Theodoret, the ecclesiastical historian, made his appearance. This excellent man, one of the ablest writers of the age, had given deadly offence to the abettors of Eutychianism, and his right to sit among the ecclesiastical judges was vehemently disputed. The discussion of his claims had been already introduced, and the opposing factions were giving utterance to their feelings in tumultuous shouts, when the bishop himself walked into the council. His appearance was the signal for increased excitement. By his friends he was welcomed with enthusiastic acclamations, and his adversaries loudly called out: "Cast forth the Jew, the enemy of God, the blasphemer of Christ." In the midst of this Babel of jarring sounds, the imperial commissioners were obliged to interfere, and after sternly reprimanding the bishops for behaving so disreputably required them to proceed calmly and at once with their proper deliberations. The resolutions which finally passed were exactly the reverse of those previously adopted by the assembly since so unhappily known as the "Robber Synod;" and yet a large number of the same Fathers sat and voted in both these conventions. Thus the legislators of Chalcedon repudiated the principles supported by many of themselves only two years before at Ephesus.

A minute acquaintance with the members of the third and fourth general councils is not calculated to heighten our respect for their ecclesiastical authority. Though the points submitted for decision in these synods required the exercise of very nice discrimination, and involved some of the most difficult questions in theology, not a few of these Fathers were exceedingly illiterate. All were expected to sign the doctrinal decisions, but a considerable number had not attained to such skill in penmanship as to be able to write their own names. Such subscriptions as the following occur again and again: "I," such an one, have subscribed by the hand of "such an one," because I cannot write; and such a bishop "having said that he could not write," I whose name is underwritten "have subscribed for him."

As we descend the stream of time in the history of Church events, we are continually presented with proofs that we are receding farther and farther from apostolic simplicity; and when we arrive at the sixth general council, it at once becomes apparent that we have reached an age of dense superstition. An occurrence which created no small sensation in the fifteenth session of this synod gives us an idea of the mode of argument now occasionally employed by the contending theologians. Just as Augustine proposed to settle his controversy with the British bishops whom he found in England, and who refused to receive the

orders of Rome, by appealing to a miracle, so in this assembly a monk named Polychronius presented himself to the assembly and declared that there had appeared to him a band of men in white garments encircling a personage radiant with surpassing glory. This personage directed him to go to the palace and to caution the emperor against the denial of Monothelitism, assuring him that those opposed to it—that is, those who did not hold the doctrine of one will and one operation in the Saviour—were no Christians. The monk then offered to prove by a miracle the truth of his theology. He undertook to restore a dead man to life by means of a confession of faith embodying the doctrine of one will and the one operation. The challenge was accepted, and in an open plain, into which a dead body was brought, the entire synod, with the highest officers of state, surrounded by an immense concourse of spectators, met to decide by this extraordinary experiment what was henceforth to be deemed orthodoxy. Polychronius laid his confession on the corpse and continued for several hours to whisper into its ear; but he could not awake the dead, and the announcement of his failure was a signal for the populace to load him with execrations. It is difficult to determine whether the monks or Polychronius acted the more absurdly on the occasion. He was evidently an honest, enthusiastic zealot, and he no doubt had persuaded himself that he could work miracles; but the bishops by consenting to assemble with so much ceremony to witness his proceedings showed that they were themselves bewildered, and quite unfitted to deliberate in any assembly where the interests of truth were to be defended.

Though the general councils presented so many scenes of tricking, diplomacy and discord, the invariable tone of their canons is sufficiently pretensions. The members sitting in these judicatories had ever before them the idea that they represented the Catholic Church; that they therefore acted under the direction of Him who has promised to guide his people continually; and that of course what seems good to them also seems good to the Holy Ghost. They all assume the epithet of "holy." The sixth general council employs this word with stately redundancy as it acknowledges and confirms the proceedings of its predecessors: "This our holy and oecumenical synod, having driven away the *impious* error which had prevailed for a certain time until now, and following closely the straight path of the *holy* and approved Fathers, has *piously* given its full assent to the five *holy* and oecumenical synods." Whilst these arbiters of the faith thus eulogize themselves, they denounce their theological adversaries in terms of unmerited severity. Those whom they deem errorists are "impious heretics" who stand convicted of "madness and blasphemy." The views of Nestorius have by many been held to be scarcely distinguishable from those of his antagonists, and yet they are described as his "frenzied imaginations" and as "monstrous doctrine." The question decided by the sixth oecumenical council relating to the volitions of Christ is largely of a metaphysical character, and has not apparently a direct influence on personal godliness; but the Fathers of Constantinople deliberately stigmatize the Monothelites as "suitable instruments for working out the will of the devil." This bitter and contemptuous language contrasts strangely with the terms of high-flown adulation in which the councils always speak of the reigning monarch. No matter what his personal character was, he is described as "most religious." The members of the third

Council of Constantinople very complacently compliment both the emperor Constantine Pogonatus and themselves. "Our God," say they, "has raised up our faithful sovereign—a new David—having found him a man after his own heart, who, as it is written, has not suffered his eyes to sleep or his eyelids to slumber until he has found a perfect declaration of orthodoxy by this our divinely collected and holy synod."

Though it is preposterous to place even ancient general councils on a level with the word of God, they are still entitled to respectful consideration. They reflected the spirit of the times in which they met for consultation; and they are memorials of the primitive Church polity, or of government by Church judicatories. We are not to infer that piety had forsaken the earth because we see so few indications of its holy and happy influence in the history of these conventions. We cannot always judge of individual character from the proceedings of great meetings where questions which have already created heartburnings and divisions are the topics of discussion, for comparatively few can preserve unruffled equanimity amidst the excitement and provocations of public debate; and when the spirit of party is intensely moved, even good men are sometimes tempted to perform acts from which they would at other times recoil. Notwithstanding the folly perpetrated in the general councils, all of them contained individuals who were the leaders of thought in their generation. Some of those who figured in them most prominently were remarkable rather for tact or rhetorical ability than for private worth or pastoral excellence; but the most of these assemblies contained a considerable number of men of true godliness, though it may be of narrow views and of little intellectual culture.

Although the creed of the Nicene Council was very express in its terms, it was soon found needful that an addition was required to express the faith of the Church more definitely than it was set forth in that symbol. Accordingly, the oecumenical Council of Constantinople, in A. D. 381–383, finished the work by adding the following words:

"And I believe in the Holy Ghost, the Lord and Giver of life, who proceeded from the Father; who, with the Father and the Son together, is worshipped and glorified; who spake by the prophets. And I believe in one catholic and apostolic Church. I acknowledge one baptism for the remission of sins, and I look for the resurrection of the dead and the life of the world to come." Soon afterward the doxology, "Glory be to the Father and to the Son and to the Holy Ghost," with the response, "As it was in the beginning, is now and ever shall be, world without end. Amen," was added to the perpetual confession of Christendom, and has resounded in the Church ever since.

The commencement of the general councils constituted a new era in the history of the Roman empire. Before the time of the recognition of the gospel by Constantine the sovereign was the high priest of heathenism, the supreme director of the worship of his subjects, as well as their civil ruler. But when Christianity became the religion of the State, the monarch ceased in one department to possess absolute power. Athanasius, backed by the decision of the Council of Nice, dared to disobey the mandate of Constantine himself, and refused to admit Arius to communion. The authority of the Church now began to control the authority of the emperor. The will of the prince seemed indeed to dominate in the councils, but his influ-

ence was frequently more apparent than real. There were times when he was borne along by the current, and merely took the lead in movements which he could not restrain.

Apart from the proceedings of a council, whether good or evil, its title to be called universal or oecumenical simply depends on the decision of one question, whether or not it contains, so far as may be possible, representatives of the Christian Church in all parts of the world, and of all the recognized divisions of the Church of Christ. So vast and various an assemblage could scarcely be hoped for; and if it were possible, it is certain that it could not act. Even if it acted, the character of its proceedings would have to be ascertained before the world could possibly know how to estimate its value. Therefore, taking no account of the name, it remains to ascertain whether the so-called general councils which have been held since the time of Nicea (Nice) and Constantine to the present have been such as to deserve the confidence and gratitude of posterity. The second Council of Nicea, for example, convened at the bidding of the empress Irene, in A. D. 787, for the express purpose of establishing the worship of images in the churches of the East, after the images had been broken by the zeal of the people, and under the sanction of a numerous council in Constantinople, can only be mentioned as having upheld idolatry and dishonored the Christian name. In relation to the history of Europe, it is marked as the proximate cause of separating East and West; and they who can see God in history fail not to notice the retribution which makes the division of Europe in the eighth century a chief cause of the gradual weakening of the Latin Church from that time to the present. Very soon after the decrees of the second Council of Nicea for the restoration of "sacred images" in churches and elsewhere, the Greek Church formally separated from the Church of Rome, and now treats its overtures for reconciliation with disdain. The second Council of Nice was, after all, more political than religious; and the history of these assemblies is full of evidence to show that contentious priests and rival princes were playing with the sacred interests of mankind and desecrating the name of Christianity. All experience, therefore, after the fourth century of the Christian era, teaches that the religion of the Saviour was framed and established by himself, and that there is no parliament of any sort, either civil or ecclesiastical, that can frame it anew, or that men can safely trust to improve or strengthen it.

A remarkable period in the history of such assemblies extends from the Council of Pisa to that of Basil (Basle) in the fifteenth century. Curious collectors of dates and facts count no fewer than six-and-twenty schisms in the Church of Rome—that is to say, divisions of the whole popedom into separate "obediences." Seven of these, however, took place before the bishop of Rome became pope by the express authority of the emperor Phocas. Nineteen times since then two or more anti-popes have been contending for the occupation of the papal throne, each of them having the title of pope, and receiving homage as such from a portion of the popedom. At length the case of the papacy became desperate, and it was to be apprehended that as Constantinople and Rome were irrecoverably separated, so Rome and Avignon each having its own pope with his cardinals and court, the schism of Christendom would be permanent, and the papacy itself eventually be-

come impossible. The Councils of Pisa, Constance and Basil spent about thirty-five years in striving, not quite unsuccessfully, to save the papacy, but with no regard to what is most essential to the unity and safety of the Church of God.

While two anti-popes under the names of Benedict XIII. and Gregory XII. were struggling for ascendancy, the cardinals of the two obediences were met in the cathedral of Pisa to assume the government of the divided Church, and sit in judgment over both of them. Both were summoned to appear, but neither came. Thrice a cardinal made solemn proclamation at the church door, but they were contumacious notwithstanding. After due solemnity they were solemnly proclaimed contumacious and heretical, and a successor to the throne was elected and adored under the name of Alexander V. Alexander was utterly worthless; he soon died, and was succeeded by one of his patrons. Forthwith the Council of Constance assembled, A. D. 1414, under the emperor Sigismund, and had much work to do in getting rid of three anti-popes and creating one new pope, who took the name of Martin V. But the three false pontiffs, John XXIII., Gregory XII. and Benedict XIII., were not the only troubles of the notorious Council of Constance. Two heretics—namely, John Huss and Jerome of Prague—were spreading doctrines more hated by the members of the council than all the anti-popes with their vicious habits and restless greed. They had learned the doctrines of John Wycliffe, and the kingdom of Bohemia threatened to cast off the papacy, now made so utterly contemptible. The council therefore divided its labors between the affairs of the anti-popes and those of the heretics. Huss they summoned into their presence, and he came thither under a safe-conduct from the emperor; but no sooner did they get him within the gates of Constance than they took him into custody, passed him from prison to prison, tried him for heresy, and finally bound him to a stake and burned him alive. A noble Bohemian who boldly came to Constance to plead for him, undaunted by the prospect of a cruel death, was in like manner seized, imprisoned, convicted of heresy and burned alive. Having set up a new pope and martyred two witnesses for God's truth, the Council of Constance dispersed, and its name became a brand of infamy.

Still, the schism continued; no council ever burned a pope, or even a pretender to the papacy, and therefore none of these Gregories or Benedicts came to the stake. They lived on, others sprang up after them, and at length another council met at Basil, where it labored vainly for many years to heal the system, but proved the incapacity of such councils to do anything but mischief. It remained in permanence from A. D. 1431 until A. D. 1443, and dissolved itself with two pontiffs more firmly than ever settled in their seats. One of them, Nicholas V., having better temper and more sense than most of his predecessors, so far outmatched his competitor Felix as to induce him to put off the habit of a pope and accept that of a cardinal, with wealth and quietness to end his days.

The councils held in the city of Rome were all similar in character. They were held in times of trouble or disgrace, and they were all entirely subject to the direct personal control of the popes who convened them, and have been remarkably devoid of permanent influence, except for the purposes of persecution. For instance, A. D. 1123, the first Council of Lateran, called the ninth œcumenical, assembled. Pope Calixtus II. pub-

lished the decrees in his own name, as if the abbots and bishops present were of no account whatever. The object of the so-called council was to inspire the mass of the clergy everywhere against the secular authorities and to set the pope above the king in every country. The object of the pope in this council was to settle the question of "investiture" that his claims would have been supreme in every country where the Church held any property; and thus the civil power would have been laid prostrate at the feet of the pope. In A. D. 1139 the second Lateran Council, recognized as the tenth general council, assembled. Innocent II. brought as many bishops together as he could collect and rule to denounce a rival, with whom he had a pitched battle. After this he had to flee from Rome to France; and, like Pius IX., he was restored to Rome by a French army. In A. D. 1179 Alexander III. convened the third Lateran Council, which is called the eleventh œcumenical. His object was twofold, as he aimed at guarding against the election of antipopes in future, in which he signally failed; and he also sought to put down the Cathari, Patarenes and other dissentients; but he had little success beyond the shedding of much blood. This third Lateran was called the Pope's Council, inasmuch as the whole business was transacted by him and for him. In A. D. 1215, the fourth Lateran, recognized as the twelfth œcumenical, Council was summoned by Innocent III., and he surrounded himself by four hundred and twelve bishops, over whom he presided. Professedly, he aimed at the correction of morals and the condemnation of heretics. In this council he laid broad and sure foundations for the full establishment of the Inquisition, for which preparatory measures had been taken by Alexander in the preceding council of the Lateran. Here he bound princes and magistrates to kill those whom the inquisitors should condemn. The fifth Lateran Council, which sat from A. D. 1512 to A. D. 1517, under Julius II., was managed to strengthen the pope against Louis XII. of France, who had invaded Italy. Leo X. continued it in order to follow up the same object and, as he professed, to maintain peace among the princes of Christendom, many of whom he had alienated effectually by his own extravagances. He did his best to nullify those regulations of the Council of Pisa which gave councils authority over popes; and he succeeded in making the council declare absolutely the contrary, while solemn excommunication was denounced on all persons who should presume to comment upon or interpret its transactions without the special license of the holy see.

The history of the Council of Trent is better known to general readers than that of any other. It met A. D. 1545, and was opened by Paul III., and after many suspensions and much delay it closed its last and busiest session under the pontificate of Paul IV., on December 4, 1563. The council was completely under the control of the pope, his cardinals and Italian priests. The Italians were always able to command a majority, if questions were to be settled by mere majority of votes. But votes were not free; for as the proceedings of the council were managed, the objects of the papal party were effectually secured. The chief aim of the leaders was to counteract the great Reformation which had commenced in Germany, and which was spreading over Europe. Some gross abuses were no doubt corrected; and with a view to improve the character of the clergy, who had become exceedingly demoralized,

a system of government was devised which it was hoped would enable the hierarchy to cope with the Reformed Churches in Germany, France and England. Doctrine was fully discussed, and the canons on that subject were drawn up with great care, the different propositions being stated with minute precision, accompanied with an "anathema" against all who would dare to question or reject them.

Three hundred years rolled on, and the aims of the papal court required the sanction of another council to establish and confirm its policy among "the faithful." Pius IX., who had proclaimed the dogma of the Immaculate Conception of the Virgin Mary, intimated his intention to an assembly of bishops assembled at Rome to call another council. This he did in an allocution delivered on June, 1867, and the bishops replied on June 1, 1867, expressing their joy at the wisdom and courage of the pope in summoning another œcumenical assembly. The call was issued by an encyclical dated in the twenty-third year of his pontificate, on June 29th (the feast of St. Peter and St. Paul), A. D. 1868. The call produced great excitement all over Europe, and it was fondly hoped that as the Council of Trent had aimed at crushing the Reformation of the sixteenth century, so the approaching assembly would succeed in overthrowing the dangerous and presumptuous ideas of the present age. Some even hoped that, while infidelity would be eradicated, the long-separated parts of the Church would again be brought together and firmly cemented. For this end the pope issued two letters, addressed to the Greek schismatics and the different sects of Protestants, in the month of September, A. D. 1868, inviting them to return to the only sheepfold of Christ for the salvation of their souls. The Eastern patriarchs despised and rejected the invitation, and the different Protestant churches either ignored it or in respectful terms reasserted their position. Among the Protestant bodies that declined were the pastors of Geneva, the Hungarian Lutherans, the Presbyterians of the United States, the branch of the Evangelical Alliance at Paris, and two associations in Berlin and Stuttgart; and the Rev. Dr. Cumming of London offered to attend provided he were allowed to state the reasons for the separation of Protestants from the Church of Rome, to which he received a reply that such a course would be incompatible with the fact that the infallibility and supremacy of the Roman Church had long since been established. The Vatican Council, therefore, turned out as the assembly at Trent had done, to be merely a Roman council, and the result showed that, instead of the reunion of long-separated branches of the Church, another division was to take place by the course adopted on the part of the "Old Catholics," who protested against the course adopted by the leaders of the council, as well as against the conclusion at which the Fathers arrived.

The attendance was larger than that of any former council. The bishops of the Romish Church qualified to sit in a council numbered one thousand and thirty seven. Of this number there were present at the opening of the council seven hundred and nineteen, and this number was afterward increased to seven hundred and sixty-four. Of these, five hundred and forty-one belonged to European countries, eighty-three were from Asia, fourteen came from Africa, one hundred and thirteen were from different places in America, and thirteen represented the isles of Oceania. The council was opened with immense pomp in the

basilica of the Vatican on December 8 (the feast of the Immaculate Conception of the Virgin Mary), A. D. 1869, and it dragged on its existence until October 20, 1870. It was then adjourned till November 11, 1870, when it was postponed indefinitely in consequence of the condition of political affairs in the nations of Europe; and it is probable that as the great point has been settled which was so important in the eyes of Pius IX., the Fathers will never again be brought together.

The members were enjoined to observe the most guarded secrecy, reports were locked up and the world was only to know the results when the court of Rome would publish an official report of the conclusions. Four subjects were proposed for deliberation, viz., faith, discipline, religious orders, and rites which included missions. Special commissions were appointed to consider these subjects, and during the ten months of the council there were only four public sessions. It was soon seen that the management of the council was in the hands of the pope, the cardinals and the Jesuits, who had their own objects to secure by the decree which was sought to be promulgated. Vehement censures were made by many members on the dictation which was exercised toward them, and more than one hundred bishops of different nations signed a protest, declaring that the want of freedom, the management to secure a mere majority vote and the handling of the council would render its decision useless, but the protest was disregarded. There is no doubt but that a large number of eminent men were in the council, but they were either overborne by clamor if they dissented, or they were so "managed" that their arguments were not permitted to produce any effect, and the pope was permitted to see the great aim of his life realized.

The Council of the Vatican has, by its decree of papal supremacy and infallibility, settled the internal strife which for ages prevailed in the Church between Ultramontanism and Gallicanism. The principal authority has now been recognized and ratified. The episcopate has been divested of its powers and left at the feet of the papacy. Papal absolutism is now complete, and the party in the Church that can now manipulate the pope for its own policy is supreme. Papal infallibility had been denied by many, doubted by some and admitted by others, but now it is ratified under an anathema as a binding article of faith.

It only remains, in closing this narrative, that the terms of the decision of the council on infallibility should be given, so that the reader may judge for himself what the council did really proclaim, and why the decree was required. On the dogmatic constitution of the Church, after a preface, four chapters follow. The first asserts the "institution of the apostolic primacy in blessed Peter;" the second treats of the "perpetuity of the primacy;" the third expounds the "power and nature of the primacy of the Roman pontiff;" and then follows in chapter iv. the DECREE as follows:

"Moreover, that the supreme power of teaching

is also included in the apostolic primacy, which the Roman pontiff, as the successor of Peter, prince of the apostles, possesses over the whole Church, this holy see has always held, the perpetual practice of the Church confirms, and œcumenical councils also have declared, especially those in which the East with the West met in the union of faith and charity. For the Fathers of the fourth Council of Constantinople, following in the footsteps of their predecessors, gave forth this solemn profession. The first condition of salvation is to keep the rule of the true faith, and because the sentence of our Lord Jesus Christ cannot be passed by, who said: 'Thou art Peter, and upon this rock I will build my Church,' these things which have been said are approved by events, because in the apostolic see the Catholic religion and her holy and well-known doctrine has always been kept undefiled. Desiring, therefore, not to be in the least degree separated from the faith and doctrine of that see, we hope that we may deserve to be in the one communion, which the apostolic see preaches, in which is the entire and true solidity of the Christian religion. And with the approval of the second Council of Lyons, the Greeks professed that the holy Roman Church enjoys supreme and full primacy and pre-eminence over the whole Catholic Church, which it truly and humbly acknowledges that it has received with the plenitude of power from our Lord himself in the person of blessed Peter, prince or head of the apostles, whose successor the Roman pontiffs; and as the apostolic see is bound before all others to defend the truth of faith, so also, if any questions regarding faith shall arise, they must be defined by its judgment. Finally, the Council of Florence defined that the Roman pontiff is the true vicar of Christ, and the head of the whole Church, and the father and teacher of all Christians; and that to him in blessed Peter was delivered by our Lord Jesus Christ the full power of feeding, ruling and governing the whole Church.

"To satisfy this pastoral duty, our predecessors ever made unwearied efforts that the salutary doctrine of Christ might be propagated among all the nations of the earth, and with equal care watched that it might be preserved genuine and pure where it has been received. Therefore the bishops of the whole world, now singly, now assembled in synod, following the long-established custom of churches, and the form of the ancient rule, sent word to this apostolic see of those dangers, especially, which sprang up in matters of faith, that these the losses of faith might be most effectually repaired where the faith cannot fail. And the Roman pontiffs, according to the exigencies of time and circumstances, sometimes assembling œcumenical councils, or asking for the mind of the Church scattered throughout the world, sometimes by particular synods, sometimes by using other helps which divine Providence supplied, defined as to be held those things which with the help of God they had recognized as conformable with the sacred Scriptures and apostolic traditions. For the Holy Spirit

was not promised to the successors of Peter, that by his revelation they might make known new doctrine; but by his assistance they might inviolably keep and faithfully expound the revelation or deposit of faith delivered through the apostles. And indeed all the venerable Fathers have embraced, and the holy orthodox doctors have venerated and followed, their apostolic doctrine; knowing most fully that this see of holy Peter remains ever free from all blemish of error, according to the divine promise of the Lord our Saviour made to the prince of his disciples: 'I have prayed for thee that thy faith fail not, and, when thou art converted, confirm thy brethren.'

"This gift, then, of truth and never-failing faith was conferred by heaven upon Peter and his successors in this chair, that they might perform their high office for the salvation of all; that the whole flock of Christ, kept away by them from the poisonous food of error, might be nourished with the pasture of heavenly doctrine, that, the occasion of schism being removed, the whole Church might be kept one, and resting on its foundation, might stand firm against the gates of hell.

"But since in this very age, in which the salutary efficacy of the apostolic office is most of all required, not a few are found who take away from its authority, we judge it altogether necessary solemnly to assert the prerogative which the only begotten Son of God vouchsafed to join with the supreme pastoral office.

"Therefore, faithfully adhering to the tradition received from the beginning of the Christian faith, for the glory of God our Saviour, the exaltation of the Catholic religion and the salvation of Christian people, the sacred council approving, we teach and define that it is a dogma divinely revealed that the Roman pontiff when he speaks *ex cathedra*—that is, when in discharge of the office of pastor and doctor of all Christians, by virtue of his supreme apostolic authority, he defines a doctrine regarding faith or morals to be held by the universal Church, by the divine assistance promised to him in blessed Peter—is possessed of that infallibility with which the divine Redeemer willed that his Church should be endowed for defining doctrine regarding faith or morals; and that therefore such definitions of the Roman pontiff are irreformable of themselves, and not from the consent of the Church. But if any one—which may God avert!—presume to contradict this our definition, let him be anathema.

"Given at Rome in public session solemnly held in the Vatican basilica, in the year of our Lord one thousand eight hundred and seventy, on the eighteenth day of July, in the twenty-fifth year of our pontificate."

To such length has a Roman council gone, thus clothing a mere man with an attribute of the Deity, and this has been done notwithstanding all the decisions of former councils, all the decrees of popes which stand out on the page of history, and which no power on earth can erase, and no dogmatist need attempt to deny.

**A HARMONY OF THE FOUR GOSPELS;**  
OR, THE EVENTS IN OUR LORD'S LIFE IN CHRONOLOGICAL ORDER.

SECT.	THE CONSECUTIVE NARRATIVE OF THE GOSPELS.	PLACE.	MATT.	MARK.	LUKE.	JOHN.
<b>PART I.—EVENTS CONNECTED WITH THE BIRTH AND CHILDHOOD OF OUR LORD.</b>						
<i>Time: About thirteen years and a half.</i>						
1.	The Genealogies .....	Jerusalem .....	i. 1-17	.....	iii. 23-38	.....
2.	The birth of John announced to Zacharias.....	Nazareth .....	.....	.....	i. 5-25	.....
3.	The birth of Jesus announced to Mary.....	Juttah? .....	.....	.....	i. 26-38	.....
4.	Mary's visit to Elizabeth, and her song of praise.....	Juttah? .....	.....	.....	i. 39-56	.....
5.	The birth of John the Baptist.....	Nazareth .....	.....	.....	i. 57-80	.....
6.	An angel appears to Joseph.....	Bethlehem .....	i. 18-25	.....	.....	.....
7.	The birth of Jesus.....	Near Bethlehem .....	.....	.....	ii. 1-7	.....
8.	Angelic mission to the shepherds.....	Beth'lem and Jerusalem .....	.....	.....	ii. 8-20	.....
9.	The circumcision of Jesus, and his presentation in the temple.....	Jeru. and Bethlehem .....	.....	.....	ii. 21-38	.....
10.	The visit of the Magi.....	Nazareth .....	ii. 1-12	.....	.....	.....
11.	The flight into Egypt. Herod's cruelty. The return from Egypt to.....	Jerusalem .....	ii. 13-23	.....	ii. 39, 40	.....
12.	At twelve years of age Jesus goes to the passover.....	Jerusalem .....	.....	.....	ii. 41-52	.....
<b>PART II.—ANNOUNCEMENT AND INTRODUCTION OF OUR LORD'S PUBLIC MINISTRY.</b>						
<i>Time: About one year; commencing about eighteen years after Sect. 12.</i>						
13.	The Ministry of John the Baptist.....	The Desert. Jordan... ..	iii. 1-12	i. 1-8	iii. 1-18	.....
14.	The baptism of John.....	The Jordan.....	iii. 13-17	i. 9-11	iii. 21-23	.....
15.	The temptation.....	Desert of Judea.....	iv. 1-11	i. 12, 13	iv. 1-13	.....
16.	Testimony of John the Baptist to Jesus.....	Bethabara.....	.....	.....	.....	i. 15-34
17.	Two of John's disciples follow Jesus. Andrew brings Peter to him.....	Bethabara.....	.....	.....	.....	i. 35-42
18.	Jesus returns to Galilee. Philip becomes his disciple, and brings Nathanael.....	Galilee.....	.....	.....	.....	i. 43-51
19.	The marriage at Cana in Galilee. Visit to Capernaum.....	Cana and Capernaum.. ..	.....	.....	.....	ii. 1-12
<b>PART III.—FROM THE FIRST PASSOVER DURING OUR LORD'S PUBLIC MINISTRY UNTIL THE SECOND.</b>						
<i>Time: One year.</i>						
20.	Jesus goes to Jerusalem to the passover—drives the traders out of the temple.....	Jerusalem .....	.....	.....	ii. 13-25	.....
21.	Nicodemus visits him at night.....	Jerusalem .....	.....	.....	iii. 1-21	.....
22.	Jesus leaves Jerusalem, but remains in Judea and makes disciples. Further testimony of John the Baptist.....	Enon.....	.....	.....	iii. 22-36	.....
23.	Jesus departs for Galilee after John is cast into prison.....	Galilee.....	iv. 12	i. 14	iv. 1-3	.....
24.	Passing through Samaria, he converses with a woman of Sychar at Jacob's well. Many Samaritans believe on him.....	Samaria.....	.....	.....	iv. 4-42	.....
25.	He arrives in Galilee, and teaches there publicly.....	Galilee.....	iv. 17	i. 14, 15	iv. 14, 15	.....
26.	He comes again to Cana—heals the son of a nobleman lying ill at Capernaum.....	Cana.....	.....	.....	iv. 43-45	.....
27.	Jesus at Nazareth; he is there rejected. He goes to Capernaum, fixes his abode there, and teaches publicly on the Sabbath.....	Nazareth—Capernaum .....	iv. 13-16	.....	iv. 16-31	.....
28.	The call of Peter, Andrew, James and John, and the miraculous draught of fishes.....	Sea of Galilee; near Capernaum .....	iv. 18-22	i. 16-20	v. 1-11	.....
29.	Jesus heals a demoniac in the synagogue.....	Capernaum .....	.....	i. 21-23	iv. 31-37	.....
30.	He heals Peter's wife's mother, and many others.....	Capernaum .....	.....	i. 29-34	iv. 38-41	.....
31.	He makes his first circuit with his disciples throughout.....	Galilee.....	iv. 23-25	i. 35-39	iv. 42-44	.....
32.	He heals a leper. On account of his great popularity he retires to.....	The Desert.....	viii. 2-4	i. 40-45	v. 12-16	.....
33.	He returns to Capernaum. The people flock to him. He heals a paralytic let down through the roof.....	Capernaum.....	ix. 2-8	ii. 1-12	v. 17-26	.....
34.	He calls Matthew to follow him.....	Sea of Galilee.....	ix. 9	ii. 13, 14	v. 27, 28	.....
<b>PART IV.—FROM THE SECOND PASSOVER UNTIL THE THIRD.</b>						
<i>Time: One year.</i>						
35.	Jesus at Jerusalem at the passover; heals an infirm man at the pool of Bethesda on the Sabbath. The Jews seek to kill him.....	Jerusalem—Bethesda.. ..	.....	.....	.....	v. 1-47
36.	The disciples pluck ears of corn on the Sabbath.....	On the way to Galilee. Galilee.....	xii. 1-8	ii. 23-28	vi. 1-5	.....
37.	Healing of a withered hand on the Sabbath.....	.....	xii. 9-14	iii. 1-6	vi. 6-11	.....
38.	Jesus withdraws to the Sea of Galilee, and is followed by great multitudes from the surrounding country. He heals many.....	Sea of Galilee .....	xii. 15-21	iii. 7-12	vi. 12-19	.....
39.	He retires to the mountain, and chooses the twelve; the people follow him.....	Near Capernaum.....	x. 2-4	iii. 13-19	vi. 20-49	.....
40.	The sermon on the mount.....	North of Capernaum.....	v. 1 to viii. 1	.....	vii. 1-10	.....
41.	Healing of a centurion's servant.....	Capernaum .....	viii. 5-13	.....	.....	.....
42.	Jesus raises a widow's son at Nain. His fame spreads through all the neighborhood and in Judea.....	Nain.....	.....	.....	vii. 11-17	.....
43.	John the Baptist in prison sends disciples to Jesus.....	Nain.....	xi. 2-19	.....	vii. 18-35	.....
44.	Jesus upbraids inhabitants of Chorazin, Bethsaida and Capernaum for unbelief.....	Nain.....	xi. 20-30	.....	.....	.....
45.	While sitting at meat with a Pharisee, Jesus is anointed by a penitent woman.....	Capernaum? .....	.....	.....	vii. 36-50	.....
46.	Jesus, with the twelve, makes a second circuit.....	Galilee.....	.....	.....	viii. 1-3	.....
47.	He heals a demoniac. The scribes and Pharisees charge him with being in league with Satan.....	Capernaum.....	.....	.....	xi. 14, 15,	.....
48.	Our Lord's remarks upon their request of a sign.....	Capernaum .....	xii. 22-37	iii. 19-30	17-23	.....
49.	His remark respecting his mother and brethren.....	Capernaum .....	xii. 38-45	.....	xi. 16, 24-36	.....
50.	At a Pharisee's table, he exposes the hypocrisy of the Pharisees and scribes, and denounces woes against them.....	Capernaum .....	xii. 46-50	iii. 31-35	viii. 19-21	.....
51.	He discourses upon hypocrisy, worldliness and unwatchfulness.....	Capernaum .....	.....	.....	xi. 37-54	.....
52.	Our Lord's observations upon the slaughter of certain Galileans. Parable of the barren fig tree.....	Galilee.....	.....	.....	xii. 1-59	.....
53.	A great multitude collect around him, and he addresses them out of a vessel on the lake. Parable of the sower.....	Sea of Galilee.....	xiii. 1-23	iv. 1-25	viii. 4-18	.....

**A HARMONY OF THE FOUR GOSPELS.**

(CONTINUED FROM PRECEDING PAGE.)

SECT.	THE CONSECUTIVE NARRATIVE OF THE GOSPELS.	PLACE.	MATT.	MARK.	LUKE.	JOHN.
54.	Parables of the tares, the grain of mustard seed, the leaven, the hidden treasure, the pearl of great price, and the net cast into the sea.....	Sea of Galilee.....	xiii. 24-53	iv. 26-34	viii. 22-25	.....
55.	Jesus crosses the lake with his disciples, and stills a storm.....	Sea of Galilee.....	viii. 18-27	iv. 35-41	viii. 26-40	.....
56.	He casts the devils out of two demoniacs of Gadara.....	S. E. Sea of Galilee.....	viii. 28	v. 1-21	viii. 26-40	.....
57.	The feast at Levi's house, with publicans and sinners.....	Capernaum.....	ix. 10-13	ii. 15-17	v. 29-32	.....
58.	The question of John's disciples respecting fasting, and our Lord's reply.....	Capernaum.....	ix. 14-17	ii. 18-22	v. 33-39	.....
59.	Raising of Jairus's daughter; and healing of a woman with issue of blood.....	Capernaum.....	ix. 18-26	v. 22-43	viii. 41-56	.....
60.	Two blind men healed, and a dumb spirit cast out.....	Capernaum.....	ix. 27-34	.....	.....	.....
61.	Jesus teaches in his own country, and is rejected.....	Nazareth .....	xiii. 54-58	vi. 1-6	ix. 1-6	.....
62.	A third circuit throughout the country. The twelve sent forth.....	Galilee & Capernaum .....	ix. 35 to xi. 1	vi. 6-13	ix. 1-6	.....
63.	Herod supposes Jesus to be John the Baptist, whom he had beheaded.....	.....	xiv. 1-12	vi. 14-29	ix. 7-9	.....
64.	The twelve return to Jesus. He retires with them to a desert place on the other side of the Sea of Galilee. He feeds five thousand.....	Sea of Galilee.....	xiv. 13-21	vi. 30-44	ix. 10-17	vi. 1-14
65.	The disciples return across the Sea of Galilee, and at night Jesus comes to them walking upon the water. He goes to.....	Gennesaret .....	xiv. 22-36	vi. 45-56	.....	vi. 15-21
66.	The people seek Jesus and find him at Capernaum. He teaches in the synagogue. Many disciples are offended, and leave. Peter's confession.....	Capernaum.....	.....	.....	.....	vi. 22-71
<b>PART V.—FROM THE THIRD PASSOVER UNTIL OUR LORD'S ARRIVAL AT BETHANY, SIX DAYS BEFORE THE FOURTH.</b>						
<i>Time: One year, less one week.</i>						
67.	Pharisees and Scribes from Jerusalem object to the disciples' disregarding tradition of elders with respect to washing of hands. Our Lord's reply.....	Capernaum .....	xv. 1-20	vii. 1-23	.....	.....
68.	Jesus goes to borders of Tyre and Sidon. A Syrophenician woman obtains deliverance for her daughter.....	Coast Tyre and Sidon .....	xv. 21-28	vii. 24-30	.....	.....
69.	He returns through Decapolis; he heals many and feeds four thousand.....	Sea of Galilee.....	xv. 29-38	vii. 31 to viii. 9	.....	.....
70.	Jesus sends away the people and crosses the lake to Dalmanutha. The Pharisees and Sadducees again require a sign.....	Magdala.....	xv. 39-xvi. 4	viii. 10-12	.....	.....
71.	Jesus again crosses lake. Disciples cautioned against leaven of Pharisees, etc.	Bethsaida .....	xvi. 4-12	viii. 13-21	.....	.....
72.	A blind man healed.....	Bethsaida (Julias).....	.....	viii. 22-26	.....	.....
73.	Jesus goes to the region of Caesarea Philippi. Peter and the other disciples again profess their faith in him.....	Reg. Caesarea Philippi .....	xvi. 13-20	viii. 27-30	ix. 18-21	.....
74.	He foretells his own death and resurrection and the trials of his followers.....	Reg. Caesarea Philippi .....	xvi. 21-28	viii. 31-38	ix. 22-27	.....
75.	Our Lord's transfiguration and subsequent discourse.....	Mount Tabor.....	xvii. 1-13	ix. 2-13	ix. 28-36	.....
76.	Healing of a demoniac, whom the disciples could not heal.....	In the Plain.....	xvii. 14-21	ix. 14-29	ix. 37-43	.....
77.	Jesus again foretells his own death and resurrection.....	Galilee.....	xvii. 22, 23	ix. 30-32	ix. 43-45	.....
78.	The tribute-money miraculously provided.....	Capernaum.....	xvii. 24-27	ix. 33	.....	.....
79.	The disciples contend who shall be the greatest. Jesus exhorts to humility, forbearance and brotherly love.....	Capernaum.....	xviii. 1-35	ix. 33-50	ix. 46-50	.....
80.	The seventy instructed and sent out.....	Samaria.....	.....	.....	x. 1-16	.....
81.	Jesus finally leaves Galilee to go up to Jerusalem to the feast of Tabernacles. A Samaritan village refuses to receive him.....	Galilee to Jerusalem... ..	.....	.....	ix. 51-56	vii. 2-10
82.	Ten lepers cleansed.....	Samaria.....	.....	.....	xvii. 11-19	vii. 11-53
83.	Jesus at Jerusalem at the festival of Tabernacles (about six months after the third passover). He teaches in the temple. Rulers attempt to seize him.....	Jerusalem .....	.....	.....	.....	viii. 1
84.	His judgment is asked on a woman guilty of adultery.....	Jerusalem .....	.....	.....	.....	viii. 2-11
85.	He reproves the unbelieving Jews, and they attempt to stone him.....	Jerusalem .....	.....	.....	x. 25-37	.....
86.	Reply to the question of a lawyer. Parable of the good Samaritan.....	Jerusalem .....	.....	.....	xi. 1-13	.....
87.	The disciples again taught how to pray.....	Near Jerusalem.....	.....	.....	x. 17-24	ix. 1-41
88.	The seventy return, having accomplished their mission.....	Jerusalem .....	.....	.....	.....	x. 1-21
89.	A man born blind is healed on the Sabbath. Questions and objections.....	.....	.....	.....	.....	.....
90.	Jesus in the temple at the festival of Dedication (about three months after the feast of Tabernacles: sect. 83). The Jews seek to seize him; he retires beyond Jordan, and many resort to him.....	.....	.....	.....	.....	x. 22-42
91.	He goes to Bethany and raises Lazarus from the dead.....	Bethany.....	.....	.....	.....	xi. 1-46
92.	The Jewish council determine to put Jesus to death. He retires with his disciples to Ephraim near the wilderness.....	Ephraim.....	.....	.....	.....	xi. 47-54
93.	He withdraws beyond Jordan, and heals an infirm woman on the Sabbath.....	Near Jordan.....	xix. 1, 2	x. 1	xiii. 10-21	.....
94.	He goes through Peraea toward Jerusalem, teaching on his way. Some Pharisees warn him respecting Herod.....	Peraea.....	.....	.....	xiii. 22-35	.....
95.	He dines with a chief Pharisee on the Sabbath, and addresses the guests. Parable of the great supper.....	Journey to Jerusalem.. ..	.....	.....	xiv. 1-24	.....
96.	He teaches the multitude what is required of true disciples.....	.....	.....	.....	xiv. 25-35	.....
97.	Publicans and sinners flock to him. The Pharisees murmur. Parables of the lost sheep, the lost piece of silver and the prodigal son.....	.....	.....	.....	.....	xv. 1-32
98.	Parable of the unjust steward.....	.....	.....	.....	.....	xvi. 1-13
99.	The Pharisees reproved. Parable of the rich man and Lazarus.....	.....	.....	.....	.....	xvi. 14-31
100.	Jesus inculcates forbearance, faith and humility.....	.....	.....	.....	.....	xvii. 1-10
101.	Reply to question of Pharisees concerning the coming of the kingdom of God.....	Journey to Jerusalem.. ..	.....	.....	.....	xvii. 20-37
102.	Parables: The importunate widow; the Pharisee and Publican.....	.....	.....	.....	.....	xviii. 1-14
103.	Precepts respecting divorce.....	.....	xix. 3-12	x. 2-12	.....	.....
104.	Jesus receives and blesses little children.....	Peraea.....	xix. 13-15	x. 13-16	xviii. 15-17	.....
105.	The rich young ruler who rejected the terms of discipleship. Parable of the laborers in the vineyard.....	.....	xix. 16-30	x. 17-31	xviii. 18-30	.....
106.	On the way to Jerusalem, Jesus a third time foretells his death and resurrection.....	.....	xx. 1-16	.....	.....	.....
107.	Healing of two blind men near Jericho.....	.....	xx. 17-19	x. 32-34	xviii. 31-34	.....
108.	Visit to Zaccheus.....	Jericho.....	xx. 29-34	x. 46-52	xviii. 35	.....
109.	Parable of the ten servants entrusted with ten pounds.....	.....	.....	.....	xix. 1	.....
110.	Jesus arrives at Bethany six days before the Passover. Those who have come up to the festival inquire after him; and many come to him at Bethany.....	Jericho.....	.....	.....	xix. 2-10	xi. 55-57

## A HARMONY OF THE FOUR GOSPELS.

(CONCLUDED FROM PRECEDING PAGE.)

SECT.	THE CONSECUTIVE NARRATIVE OF THE GOSPELS.	PLACE.	MATT.	MARK.	LUKE.	JOHN.
	<b>PART VI.—THE LAST PASSOVER WEEK.</b>					
	<i>Time: Seven days.</i>					
111.	<i>First day of the week.</i> Jesus enters Jerusalem publicly, and at night returns to.....	Bethany.....	xxi. 1-11, 14-17	xi. 1-11	xix. 29-44	xii. 12-19
112.	<i>Second day of the week.</i> He goes into Jerusalem; on his way curses the barren fig tree; expels the traders from the temple; and in the evening returns again to.....	Bethany.....	xxi. 12, 18, 19, 20-22	xi. 12-19, 20-26	xix. 45, 46	
113.	<i>Third day of the week.</i> He again goes into the city in the morning, passing by the withered fig tree.....	Jerusalem.....	xxi. 23-46	xi. 27-33	xx. 1-19	
114.	He teaches in the temple. His authority is questioned. Parables of the two sons, and of the vineyard let out to husbandmen.....	Jerusalem.....	xxii. 1-14	xii. 1-12	xxi. 37, 38	
115.	Parable of the marriage feast.....	Jerusalem.....	xxii. 15-22	xii. 13-17	xx. 20-26	
116.	Insidious question of the Pharisees and Herodians concerning payment of tribute to Caesar.....	Jerusalem.....	xxii. 23-33	xii. 18-27	xx. 27-40	
117.	Question of the Sadducees respecting the resurrection.....	Jerusalem.....	xxii. 34-40	xii. 28-34		
118.	A lawyer questions Jesus. The two great commandments.....	Jerusalem.....	xxii. 41-46	xii. 35-37	xx. 41-44	
119.	Our Lord's question respecting the Son of David.....	Jerusalem.....	xxiii. 1-39	xii. 38-40	xx. 45, 47	
120.	Warnings against the example of the scribes and Pharisees. Woes against them. Lamentation over Jerusalem.....	Jerusalem.....		xii. 41-44	xxi. 1-4

158.	He is seen by James, and then by all the apostles. Acts i. 3-8; 1 Cor. xv. 7					
159.	He ascends into heaven.....	Bethany.....		xvi. 19, 20	xxiv. 50-53	

## AIDS FOR SOCIAL AND PRIVATE PRAYER.

TEXT.	EXPRESSIONS FOR SOCIAL AND PRIVATE PRAYER.	TEXT.	EXPRESSIONS FOR SOCIAL AND PRIVATE PRAYER.
	<b>ADORATION.</b>		<b>INTERCESSION.</b>
Jer. x. 6.....	Forasmuch as there is none like unto thee, O Lord, thou art great, and thy name is great in might; who would not fear thee, O King of nations?	Ps. lxvii. 3....	Let the people praise thee, O God; let all the people praise thee.
Ps. cxlv. 10....	All thy works shall praise thee, O Lord, and thy saints shall bless thee. They shall speak of the glory of thy kingdom, and talk of thy power.	Ps. vii. 9.....	Oh let the wickedness of the wicked come to an end; but establish the just.
Ps. xviii. 1, 2.	I love thee, O Lord, my strength. The Lord is my rock, and my fortress, and my deliverer; my God, my strength, in whom I will trust; my buckler, and the horn of my salvation, and my high tower.	Eph. vi. 24....	Grace be with all them that love our Lord Jesus Christ in sincerity. Do good, O Lord, unto those that be good, and to them that are upright in their hearts.
Ps. lxii. 1.....	Truly my soul waiteth upon God; from him cometh my salvation. He only is my rock and my salvation; he is my defence, I shall not be greatly moved.	Isa. lxiv. 1....	O that thou wouldst rend the heavens, that thou wouldst come down, that the mountains might flow down at thy presence.
Ps. lvii. 11....	Be thou exalted, O God, above the heavens; let thy glory be above all the earth.	Ps. xliii. 3....	O send out thy light and thy truth.
	<b>CONFESSION.</b>		<b>THANKSGIVING.</b>
Dan. ix. 5.....	We have sinned, and have committed iniquity, and have done wickedly, and have rebelled, even by departing from thy precepts and from thy judgments.	Ps. cvii. 15....	Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men!
I John i. 8....	If we say we have no sin, we deceive ourselves, and the truth is not in us.	Ps. cxiii. 2....	Blessed be the name of the Lord from this time forth and for evermore. From the rising of the sun unto the going down of the same, the Lord's name is to be praised. Who is like unto the Lord our God, who dwelleth on high, who humbled himself to behold the things that are in heaven and in the earth?
Isa. lxiv. 6....	We are all as an unclean thing. I acknowledge my transgression, and my sin is ever before me. For I know that in me, that is in my flesh, dwelleth no good thing; for to will is present with me; but how to perform that which is good I find not. O wretched man that I am, who shall deliver me from the body of this death?	1 Pet. i. 3....	Blessed be the God and Father of our Lord Jesus Christ, which according to his abundant mercy hath begotten us again unto a lively hope by the resurrection of Jesus Christ from the dead, to an inheritance incorruptible, and undefiled, and that fadeth not away.
Job xi. 4.....	Behold, I am vile; what shall I answer thee? I will lay my hand upon my mouth.	Eph. i. 3.....	Blessed be the God and Father of our Lord Jesus Christ, who hath blessed us with all spiritual blessings in Christ.
	<b>SUPPLICATION.</b>	Ps. lxxii. 13..	Blessed be the Lord God, the God of Israel, who only doeth wondrous things. And blessed be his glorious name for ever; and let the whole earth be filled with his glory. Amen and Amen.
Ps. lxvii. 1....	God be merciful unto us, and bless us; and cause his face to shine upon us.	Ps. xl. 5.....	Many, O Lord my God, are thy wonderful works which thou hast done, and thy thoughts which are to us-ward: they cannot be reckoned up in order unto thee: if I would declare and speak of them, they are more than can be numbered.
Ps. lxxxv. 7....	Wilt thou not revive us again, that thy people may rejoice in thee? Show us thy mercy, O Lord, and grant us thy salvation.	Ps. cxxxix. 17.	How precious also are thy thoughts unto me, O God! how great is the sum of them! If I should count them they are more in number than the sand: when I awake I am still with thee.
Luke xviii. 13.	God be merciful to me, a sinner.	Ps. ciii. 1.....	Bless the Lord, O my soul, and all that is within me, bless his holy name. Bless the Lord, O my soul, and forget not all his benefits. Who forgiveth all thine iniquities, who healeth all thy diseases. Who redeemeth thy life from destruction: who redeemeth thee with loving-kindness and tender mercies.
Ps. li. 1.....	Have mercy upon me, O God, according to thy loving-kindness: according unto the multitude of thy tender mercies, blot out my transgressions. Hide thy face from my sins, and blot out all mine iniquities. Create in me a clean heart, O God; and renew a right spirit within me.	Ps. cxvi. 12....	What shall I render unto the Lord for all his benefits toward me? I will take the cup of salvation and call upon the name of the Lord.
Ps. cxxxix. 23.	Search me, O God, and know my heart; try me, and know my thoughts. And see if there be any wicked way in me, and lead me in the way everlasting.	Ps. cxlv. 10....	All thy works shall praise thee, O Lord, and thy saints shall bless thee.
Ps. xxv. 4, 5...	Show me thy ways, O Lord; teach me thy paths. Lead me in thy truth, and teach me: for thou art the God of my salvation; on thee do I wait all the day. Remember not the sins of my youth, nor my transgressions; according to thy mercy remember thou me for thy goodness' sake, O Lord. Cast me not away from thy presence: and take not thy holy spirit from me. Restore unto me the joy of thy salvation; and uphold me with thy free spirit. O Lord, open thou my lips; and my mouth shall show forth thy praise.		<b>DEDICATION.</b>
Ps. exix. 18....	Open thou mine eyes, that I may behold wondrous things out of thy law. Hear my voice according unto thy loving-kindness: O Lord, quicken me according to thy judgment. Let my soul live, and it shall praise thee; and let thy judgments help me.	Isa. xxvi. 13.	O Lord our God, other lords besides thee have had dominion over us; but by thee only will we make mention of thy name.
Prov. xxx. 8...	Remove far from me vanity and lies: give me neither poverty nor riches; feed me with food convenient for me. Lest I be full, and deny thee, and say, Who is the Lord? or lest I be poor, and steal, and take the name of my God in vain.	Isa. lxiii. 19..	We are thine.
Ps. xxxix. 4....	Lord, make me to know mine end, and the measure of my days, what it is; that I may know how frail I am.	Ps. cxvi. 9, 16.	I will walk before the Lord in the land of the living. O Lord, truly I am thy servant; I am thy servant and the son of thine handmaid: thou hast loosed my bonds.
		1 Tim. i. 17...	Now unto the King eternal, immortal, invisible, the only wise God, be honor and glory for ever and ever. Amen.
		Rom. xvi. 27.	To God, only wise, be glory, through Jesus Christ, for ever. Amen.

## A PLAN FOR READING THE BIBLE THROUGH WITHIN A YEAR.

Various tables have been constructed for this object, but generally they are confused and difficult to be carried out. Perhaps the following is one of the simplest arrangements that could be adopted:

If the one hundred and nineteenth Psalm be reckoned as eleven chapters (i. e., two parts for a chapter), then all the chapters in the Old Testament will number nine hundred and thirty-nine (939). In the New Testament there are two hundred and sixty chapters (260). Now, if the Lord's Days, or fifty-two Sabbaths, be devoted to the New Testament, five chapters daily would include the whole book (i. e.,  $52 \times 5 = 260$ ). Reading three chapters daily, on the other days of the week, or during three hundred and thirteen days (i. e.,  $313 \times 3 = 939$ ), would exactly make nine hundred and thirty-nine, the number of chapters contained in the Old Testament. It is obvious that if the Old and New Testaments be read

through consecutively from day to day, the same object will be accomplished by reading five chapters on the Lord's Days, and three on each of the other days of the week, still remembering to take two parts of the one hundred and nineteenth Psalm as a chapter.

During leap years, the extra day may be provided for by the division of some of the long chapters, as judgment would direct; so as to have a portion for the last day of February.

It is obvious that such a mode of reading the Word of God may become very unprofitable, as quantity might come to be the chief object, instead of that thoughtful comparison of passage with passage, and that lengthened and prayerful examination of difficult portions, which alone can enable the Christian reader to profit by THE WORD.

## THE SON OF GOD, JESUS CHRIST OUR LORD:

NAMES, TITLES AND APPELLATIONS IN THE OLD AND NEW TESTAMENTS.

## THE PARABLES SPOKEN BY OUR LORD JESUS CHRIST.

WITH THE LESSON WE SHOULD LEARN FROM EACH.

ORDER.	WHERE SPOKEN.	THE ILLUSTRATION USED.	THE LESSON WE SHOULD LEARN.	TEXTS, WHERE RECORDED.
I.	Galilee.....	The Mote and the Beam in the Eye.....	That we should Judge Ourselves instead of presuming to Judge Others.....	Luke vi. 37-41.
II.	Galilee.....	The Builders upon a Rock and upon Sand.....	The Folly of Listening to without Obeying Our Lord's Precepts.....	Matt. vii. 24-27, 14-20;
III.	On a Tour.....	The Two Forgiven Debtors.....	Our Love is in Proportion to our Sense of Forgiveness.....	Luke vi. 48, 49.
IV.	Jerusalem.....	The Temple, if Destroyed, to be Raised up in Three Days.....	A Prophecy of His Resurrection.....	Luke vii. 36-50.
V.	Galilee.....	The Barren Fig Tree.....	Long-Suffering Mercy will be followed by Strict Justice.....	John ii. 19-22.
VI.	Sea of Galilee.....	The Sower on Wayside, Stony places, among Thorns and upon Good Ground.....	Our Heart must be Right in order that the Seed may be Productive.....	Luke xiii. 6-9.
VII.	Sea of Galilee.....	The Wheat and the Tares.....	Children of God and of the Devil in the Church until the Judgment, when the latter shall be burned.....	Matt. xiii. 3-8, 18-23;
VIII.	Sea of Galilee.....	The Seed Sown.....	The Secrecy of God's Working in the Heart.....	Mark iv. 1-9, 14-20;
IX.	Sea of Galilee.....	The Mustard Seed.....	The Wonderful Growth of Christ's Church.....	Luke vii. 5-8, 11-15.
X.	Sea of Galilee.....	The Leaven Hidden in the Meal.....	1. The Church Spreading through the World; 2. The Effect of Christ's Doctrines and Spirit on the Individual Christian.....	Matt. xiii. 24-30, 36-43.
XI.	Sea of Galilee.....	The Treasure buried in the Field.....	The Inestimable Value of Christ and His Blessings compared with Worldly Possessions.....	Mark iv. 26-29.
XII.	Sea of Galilee.....	The Merchant Seeking till he finds one Pearl of Great Price.....	The Importance of Seeking and Securing, at cost of any Sacrifice, Christ and His Grace.....	Mark iv. 30-32; Matt. xiii. 31, 32; Luke xiii. 18, 19.
XIII.	Sea of Galilee.....	The Drag-Net.....	The Church Gathers in, besides the Sincere, many who will at the Great Day be Cast Out.....	Luke xiii. 20, 21; Matt. xiii. 33.
XIV.	Capernaum.....	The first Parable of the Lost Sheep.....	Our Duty to Seek to Reclaim Backsliders.....	Matt. xiii. 44.
XV.	Capernaum.....	The Debtor forgiven a large Debt Unmerciful to his Fellow-servant who owed him a Small Debt.....	We must Forgive if we would be Forgiven.....	Matt. xiii. 45, 46.
XVI.	Jerusalem.....	The Good Samaritan.....	The Obligation of Christian Love to our Neighbor.....	Matt. xiii. 47-50.
XVII.	Near Jerusalem.....	Taking the Chief Seats at a Wedding.....	Humility.....	Matt. xiii. 47-50.
XVIII.	On a Tour.....	The Friend that Unwillingly Lends at Midnight.....	God will answer Importunate Prayer.....	Matt. xiii. 47-50.
XIX.	Capernaum.....	The Unclean Spirit Returning.....	The State of the Backslider.....	Matt. xiii. 47-50.
XX.	On a Tour.....	The Foolish Rich Man that Trusted in This Life.....	"A Man's Life consisteth not in the Abundance of the Things which he Possesseth,".....	Matt. xiii. 47-50.
XXI.	Jerusalem.....	The Good Shepherd.....	The wonderful Love of Christ. "I know my sheep; I lay down my Life for the Sheep".....	Matt. xiii. 47-50.
XXII.	On a Tour.....	The Watchful Servants.....	The Necessity for Constant Watchfulness.....	Matt. xiii. 47-50.
XXIII.	On a Tour.....	The Faithful and Wise Steward.....	The same Lesson reiterated and intensified.....	Matt. xiii. 47-50.
XXIV.	Near Jerusalem.....	The Door Shut.....	The Necessity for Steady Perseverance in the Strait Path.....	Matt. xiii. 47-50.
XXV.	Near Jerusalem.....	The Great Supper.....	God is no Respector of Persons.....	Matt. xiii. 47-50.
XXVI.	Near Jerusalem.....	Counting the Cost before Building a Tower.....	"Whoever doth not Bear his Cross and Come after me cannot be my Disciple".....	Matt. xiii. 47-50.
XXVII.	Near Jerusalem.....	The King going to War.....	The Joy in Heaven over One Sinner that Repenteth.....	Matt. xiii. 47-50.
XXVIII.	Near Jerusalem.....	Second Parable of the Lost Sheep.....	The same Lesson as the preceding. These two teach the great Object of our Lord's Incarnation—to Save the Lost.....	Matt. xiii. 47-50.
XXIX.	Near Jerusalem.....	The Piece of Money Lost and Found.....	God's Delight in Receiving the Repentant Sinner.....	Matt. xiii. 47-50.
XXX.	Near Jerusalem.....	The Prodigal Son.....	The Right Use of Worldly Possessions.....	Matt. xiii. 47-50.
XXXI.	Near Jerusalem.....	The Unjust Steward.....	The Fearful Consequences of Living merely for this World; also, the Doctrine of Future Rewards and Punishments.....	Matt. xiii. 47-50.
XXXII.	Near Jerusalem.....	The Rich Man (Dives) and Lazarus.....	We must not Trust or Glory in our Good Works.....	Matt. xiii. 47-50.
XXXIII.	Near Jerusalem.....	The Servant Serves his Master before he Sups.....	The Duty of Unceasing Earnest Prayer.....	Matt. xiii. 47-50.
XXXIV.	Near Jerusalem.....	The Unjust Judge and Importunate Widow.....	Humble Prayer will be Answered, while that of the Self-Righteous will not.....	Matt. xiii. 47-50.
XXXV.	Near Jerusalem.....	The Pharisee and Publican.....	God's Equity even in placing "the First Last and the Last First".....	Matt. xiii. 47-50.
XXXVI.	Near Jerusalem.....	The Laborers Hired for the Vineyard.....	Our Strict Accountability for such Talents as God has committed to us.....	Matt. xiii. 47-50.
XXXVII.	Near Jerusalem.....	The Nobleman and his Ten Servants.....	1. Condemnation of the Jews; 2. Mere Profession, without actual Service, will bring upon us like Censure.....	Matt. xiii. 47-50.
XXXVIII.	Jerusalem, Temple.....	The Two Sons.....	1. The Rejection of the Jews; 2. Our Rejection if we do not Receive Christ and His Messengers.....	Matt. xiii. 47-50.
XXXIX.	Jerusalem, Temple.....	The Vineyard Let to Husbandmen.....	1. None are too Poor or Lowly to be Welcome; 2. We must be clothed in the Wedding Garment, which is Freely Given to us.....	Matt. xiii. 47-50.
XL.	Jerusalem, Temple.....	The King's Marriage Feast for His Son. The Wedding Garment.....	The Second Coming.....	Matt. xiii. 47-50.
XLI.	Jerusalem.....	The Fig Tree Leafing.....	We must Watch for our Lord's Coming.....	Matt. xiii. 47-50.
XLII.	Jerusalem.....	The Man taking a Long Journey.....	We must Watch and Live as Expecting Him.....	Matt. xiii. 47-50.
XLIII.	Jerusalem.....	The Faithful and the Evil Servant.....	We must be constantly Prepared for His Coming.....	Matt. xiii. 47-50.
XLIV.	Jerusalem.....	The Wise and the Foolish Virgins.....	We must Improve our Talents to Secure His Blessing.....	Matt. xiii. 47-50.
XLV.	Jerusalem.....	The Talents.....	Christ, as Judge, shall Separate His Sincere Servants from the Mere Professors.....	Matt. xiii. 47-50.
XLVI.	Jerusalem.....	The Sheep and the Goats.....	Only in Christ can we bring forth Fruit unto God.....	Matt. xiii. 47-50.
XLVII.	Jerusalem.....	The True Vine.....		Matt. xiii. 47-50.

## MIRACLES PERFORMED BY OUR LORD JESUS CHRIST;

TOGETHER WITH THOSE PERFORMED NOT BY HIM DIRECTLY, BUT TO ATTEST HIS DIVINITY.

ORDER.	YEAR OF OUR LORD.	WHERE WROUGHT.	THE MIRACLES, CLASSIFIED.	WHERE RECORDED.
MIRACLES OF RAISING THE DEAD.				
XII.	27	Nain.....	The Only Son of a Widow—as they were Bearing him to the Grave.....	Luke vii. 11-16. [41, 42, 49-56.

XV.	27	Gadara.....	The Two Men Possessed of Legion, exceeding fierce.....	Matt. viii. 28-34; compare Luke viii. 26-39; and Mark v. 1-20.
XX.	27	Capernaum.....	The Dumb Man Possessed of a Devil.....	Matt. ix. 32-35. [Mark v. 1-20.
XXIV.	28	Borders of Tyre and Sidon.....	The Daughter of the Syrophenician Woman.....	Mark vii. 24-30; Matt. xx. 22-28.
XXVIII.	28	Plain of Galilee.....	The Lunatic Boy, the Disciples having failed.....	Matt. xvii. 14-21; compare Mark ix. 14-39; Luke ix. 37-43.
XXXI.	29	Capernaum.....	The Devil that was Dumb.....	[xi. 37-43.
MIRACLES OF HEALING.				
II.	27	Cana.....	Nobleman's Son—of a Fever.....	John iv. 46-54.
VI.	27	Capernaum.....	Peter's Mother-in-law—of a Fever.....	Mark i. 29-31; Matt. viii. 14-17; Luke iv. 38, 39.
VII.	27	Near Chorazin.....	A Man full of Leprosy.....	Mark i. 40-45; Matt. viii. 2-4; Luke v. 12-16.
VIII.	27	Capernaum.....	The Man borne by four—of Palsy.....	Mark ii. 3-12; Matt. ix. 1-8; Luke v. 17-26.
IX.	27	Pool of Bethesda.....	The Impotent Man who had been afflicted thirty-eight years.....	John v. 1-16. [9-13.
X.	27	Capernaum.....	The Man with Withered Hand.....	Mark iii. 1-5; Luke vi. 6-10; compare Matt. xii. 10-13.
XI.	27	Capernaum.....	The Centurion's Servant—of Palsy.....	Matt. viii. 5-13; Luke vii. 1-10.
XII.	27	Capernaum.....	The Woman who had been twelve years afflicted with Issue of Blood.....	Mark v. 25-34; Luke viii. 43-48; Matt. ix. 20-22.
XIII.	27	Capernaum.....	Sight Restored to Two Men.....	Matt. ix. 27-31.
XIV.	27	Capernaum.....	Hearing and Speech Restored to a Man.....	Mark vii. 32-37.
XV.	27	Capernaum.....	Sight Restored to a Man.....	Mark viii. 22-26.
XVI.	27	Capernaum.....	Sight Given to a Man who was Born Blind.....	John ix.
XVII.	27	Capernaum.....	A Woman who had been eighteen years afflicted.....	Luke xiii. 11-17.
XVIII.	27	Capernaum.....	A Man—of Dropsy.....	Luke xiv. 1-6.
XIX.	27	Capernaum.....	Ten Men—of Leprosy.....	Luke xvii. 11-19.
XX.	27	Capernaum.....	Sight Restored to a Beggar.....	Luke xviii. 35-43.
XXI.	27	Capernaum.....	Sight Restored to Bartimeus.....	Mark x. 46-52. } Compare Matt. xx. 29-34.
XXII.	27	Capernaum.....	The Ear of Malchus, or Marcus, the High-priest's Servant.....	Luke xxii. 50, 51.
MIRACLES OF SUPPLY.				
I.	27	Cana.....	Water Converted into Wine.....	John ii. 1-11.
III.	27	Sea of Galilee.....	Peter's Net filled with Immense Draught of Fish.....	Luke v. 1-11. [compare John vi. 5-14.
XXI.	28	Decapolis.....	Five Thousand Men, besides Women and Children, Fed.....	Matt. xiv. 15-21; Mark vi. 35-44; Luke ix. 12-17.
XXVI.	28	Decapolis.....	Four Thousand Men, besides Women and Children, Fed.....	Matt. xv. 32-39; Mark viii. 1-10.
XXIX.	28	Sea of Galilee.....	A Fish Furnishes Tribute Money.....	Matt. xvii. 27.
XLII.	29	Sea of Galilee.....	A Great Haul of Fish.....	John xxi. 6-14.
MIRACLES OF JUDGMENT.				
XVI.	27	Gadara.....	The Swine Run down a Steep place into the Sea, and are drowned.....	Matt. viii. 30-32.
XXXVIII.	29	Near Bethany.....	The Fig Tree Withered.....	Matt. xxi. 18-21; Mark xi. 12-14, 20-24.
MIRACLES OF DELIVERANCE.				
V.	27	Nazareth.....	He Delivers Himself from His Enemies.....	Luke iv. 30.
XIV.	27	Sea of Galilee.....	The Wind and Sea Obey His Word.....	Mark iv. 37-41; Matt. viii. 23-27; Luke viii. 22-25.
XXII.	28	Sea of Galilee.....	Peter Saved, trying to Walk on the Sea, as Jesus was Walking.....	Matt. xiv. 28-31; Mark vi. 45-52.
XXIII.	28	Sea of Galilee.....	The Wind Ceases, and the Vessel is Instantly at the Land.....	John vi. 21; Mark vi. 51, 52.
XXXIX.	29	Gethsemane.....	Those Sent to Apprehend Him Fall Backward.....	John xviii. 4-6.
MIRACLES WROUGHT NOT DIRECTLY BY HIM, BUT TO ATTEST HIS DIVINITY.				
B.C. 4			The Guidance of the Magi by a Star to Bethlehem.....	Matt. ii. 1-9.
A.D. 26			The Signs at His Baptism.....	Matt. iii. 16, 17; Mark i. 9-12; Luke iii. 21-23.
28			The Signs at His Transfiguration.....	Matt. xvii. 1-14; Luke ix. 28-37; Mark ix. 1-14.
29			The Answer to His Prayer.....	John xii. 28-30.
29			The Signs at His Death.....	Matt. xxvii. 45-53.
29			The Signs at His Resurrection.....	Matt. xxviii. 2; Mark xvi. 4.
29			The Signs at His Ascension.....	Matt. xvi. 19; Luke xxiv. 50, 51; Acts i. 6-12.

NOTE.—The earnest student of the Holy Word cannot but be impressed with the beneficent character of our Lord's Miracles, entirely in accord with the Mission of Love of Him who "went about doing good." This Table necessarily includes but a few of the many wonder-works of Jesus—see Matt. iv. 23, 24; xiv. 14; xv. 30; xix. 2; xxi. 14; John xx. 30; xxi. 25; Luke vii. 21. The same remark will apply to the Tables of Parables, Prophecies, Prayers and Discourses.

HOW TO READ THE WORD OF GOD—A FEW SIMPLE RULES.

In order to the profitable reading of the Word of GOD it is necessary to approach its sacred pages with becoming reverence and humility. Some persons read the Bible as a book of amusement, while others peruse it for its antiquarian character and its historical records. Others again read thoughtlessly; being accustomed from childhood to see the Book in their households, they unconsciously come to treat it as a common thing. In order, however, to study it with saving benefit, the heart must be prepared with pious dispositions and with illumination of the HOLY GHOST, which is promised to those who ask it.

1. Read with *reverence*. Remember that it is an inspired revelation in which ALMIGHTY GOD sets forth His plan of grace and mercy. To read a message from the LORD with lack of reverence or with thoughtlessness is as unwise as it is dangerous.

2. Read with *docility*. Remember that GOD is the Teacher in the Word. Do not therefore use it so as to make it sustain favorite theories or preconceived opinions. To act thus is to assume that man knows beforehand what GOD should reveal, and that it is not dishonoring to GOD to compel His Word to speak as man pleases. So also to reject the teachings of the Bible because they are humiliating to man's supposed ability or dignity is to act as if GOD knew not our state and nature, and that man were wiser than GOD.

3. Read with *intelligence and care*. Compare passage with passage, and it will be found that the Bible will be its own interpreter. There are many difficult and profound places in the Bible. Do not reject or deal rashly with such passages. Lay them aside for thought and prayer and future reading, and in time it will be found that light will arise in unexpected quarters, and such portions will be made plain.

4. Read *studiously*. Let the earnest attention of the mind and all the faculties of the soul be applied, remembering that the Word is given to make wise unto salvation. Do not ignore the lessons of any book or part of a book. Realize the fact that the Bible is *all* from GOD, and that, though all the books are not of equal interest, they are all designed for our instruction, and they all unite to complete the revelation as a whole. Read the Bible so as to discern the *system* of truth which pervades the Book, and remember always that if natural things in the universe are worthy of study, much more so are the lessons of JEHOVAH, set forth in His Word, that reveal a Saviour and tell us of the inheritance of the saints in another world.

5. Read *regularly*. It is related of CHRYSOSTOM that he read the Epistle to the Romans twice every week, and of the Rev. THOMAS GOUGE, that he read fifteen chapters daily. Aim not so much at quantity as at regularity, so as daily to feed on the Word, and thus we shall experience its sustaining and controlling power. In the labors and cares of every-day duty, as well as in the temptations, we shall feel the benefit of such feeding on the Divine counsels in the Holy Word.

6. Study the *design* of each book. Errors and heresies generally arise from separating passages and reading them without regarding their relative bearing and connection, and applying a dogmatic meaning to them, instead of ever reading with the conviction that no one part and no one book can be opposed to any others, and that a spirit of unity pervades the whole.

7. Discern always the connection which is shown to exist between *doctrine* and *duty*, and strive after spiritual obedience. To receive right views of GOD, heaven, hell, the SAVIOUR, pardon and acceptance, will necessarily lead to right feelings, and where the affections and the heart are right, then right acting will follow. In other words, true doctrines, *rightly* apprehended, are inseparable from spiritual feelings and efforts after corresponding obedience. There is darkness in every mind where mere *legality* or notional *formality* prevails.

8. Remember that the Bible is given not only to teach, but to sustain under trial, and to cheer under affliction. This is a world of care, a scene of disappointments, bereavements, trials and distress. This is not the inheritance and the rest. Here the believer walks by faith, and the soul has to lean on an unseen stay, but a never-failing support. Of that support the Word is ever full, both of direction and promise. Read with faith and receive the promise with the simplicity and heartiness of a little child, and it will be found that the LORD is a present help in the time of trouble. Study, then, the Word that teaches the soul how to cast the burden on the LORD.

9. Rely constantly on the teaching of the HOLY SPIRIT, and look for His gracious presence to shine on the Word and make the soul wise unto salvation. Remember that the "natural man receiveth not the things of the SPIRIT OF GOD. They are spiritually discerned." The HOLY GHOST has given the Word by His inspiration, and it is His office to interpret it to the soul, and to seal it on the heart. Ever look for that teaching. Read with humility, with a tender, docile spirit, being assured that if any man lack wisdom, let him ask of GOD, who giveth liberally, and it shall be given to him.

MIRACLES WROUGHT BY THE HOLY GHOST AND BY THE APOSTLES AND OTHER DISCIPLES,

TOGETHER WITH THOSE PERFORMED BY THE ANGEL OF THE LORD, BY ONE NOT A DISCIPLE, ETC.

YEAR OF OUR LORD.	BY WHOM WROUGHT.	CHARACTERISTICS OF THE MIRACLES.	WHERE WROUGHT.	THE RECORD.

NOTE TO THE TABLE OF PRESENT NUMERICAL STRENGTH.

The figures in these tables are of necessity, in the cases of some of the smaller bodies, only approximate, as no exact statistics were accessible; in the cases of the larger Denominations, they are from official publications of their own. In the column of members, the figures show the actual number of communicants, except in the case of the Roman Catholics, where they include the entire population claimed by that body.

\* See under METHODIST CHURCH.

The Inhabitants of the World speak 3064 Languages or Dialects. The average number of Deaths per annum nearly equals one-fourth of the population, while the average number of Births annually nearly reaches one-third of the population, making an increase in population of about one-twelfth each year. The several Religions are subdivided into Denominations or Sects, the aggregate of which exceeds one thousand.

## NOTE TO THE TABLE OF PRESENT NUMERICAL STRENGTH.

The figures in these tables are of necessity, in the cases of some of the smaller bodies, only approximate, as no exact statistics were accessible; in the cases of the larger Denominations, they are from official publications of their own. In the column of members, the figures show the actual number of communicants, except in the case of the Roman Catholics, where they include the entire population claimed by that body.

\* See under METHODIST CHURCH.

The Inhabitants of the World speak 3064 Languages or Dialects. The average number of Deaths per annum nearly equals one-fourth of the population, while the average number of Births annually nearly reaches one-third of the population, making an increase in population of about one-twelfth each year. The several Religions are subdivided into Denominations or Sects, the aggregate of which exceeds one thousand.

## INDEX.

IN THIS INDEX THE WORDS FOLLOWING THE DASH (—) INDICATE THE TITLES OF THE RESPECTIVE ARTICLES IN WHICH THE SUBJECTS SOUGHT OCCUR; IN THE CASE OF ARTICLES EXTENDING OVER SEVERAL PAGES, THE PAGE AND THE COLUMN ARE GIVEN.

- ABBOT, of Canterbury—Lucar.  
Abelard—Arnold of Brescia.  
Conceptualists.  
Heloise.  
Hugo.  
Innocent.  
Lombard.  
Aberdeen Assembly—Ferne.  
Abiathar—Abimelech.  
Adonijah.  
Abingdon Monastery—Ina.

   Reformed Church.  
 Zybnck—Huss.

## NOTE TO THE INDEX.

IN consequence of the contents of this work being arranged under distinct heads in which an alphabetical order is observed, an index is not required for the leading words, which may be found as in an ordinary dictionary or lexicon. Still, in many of the articles, there are references to persons, places or events which are of great interest, and the reader unaccustomed to the work might find a difficulty in remembering the head under which they may be found. So, also, the fullness of the work will not at first sight be apparent to a hasty observer who merely glances at the leading words or headings of the separate articles. With a view, therefore, to aid readers in discovering the parts of the Encyclopedia where important matter may be found, as well as to indicate the comprehensive nature of the work, the foregoing index has been prepared, and it is believed that it will be found to be copious enough to secure these objects, and yet not so minute and extensive as unduly to overload the work. The index to the illustrations will enable the reader without any difficulty to discover the page on which the different illustrations may be found. Owing to the fact that the subjects which have been illustrated often require but brief articles, while a number of engravings have been given to illustrate them, it was found impossible to place them all on the same page, or even on adjacent pages. The reader will find this index a satisfactory guide through this department of the work.

1990

## INDEX OF ILLUSTRATIONS.

- AARON, Tomb of, 29.  
 Abbess (English), 28.  
 Abbot, Mitred, 28.  
 Abn, Mount, Temple on, 1609.  
 Abraham, Fountain of, 70.  
 Absalom's Tomb, 37.  
 Abyssinian Queen Journeying, 40.  
 Acceldama, 41.  
 Achan Hiding Treasures, 43.  
 Aere, 38.  
 Acropolis, Athens, 229.  
 Addax Oryx, 619.  
 Adder, 52.  
 Addereth, The, 529.  
 "Adjutant," The (Stork), 1577.  
 Adonijah, with Joab and others, 1540.  
 Adonis Sleeping, 1603.  
 Adoption, Spirit of, 55.  
 Adjeroud (Edham), 1489.  
 Adultery, Woman taken in, 57.  
 Ælius Hadrian, 784.  
 Agave, 92.  
 Aggle-Stone, 30.  
 Agnus Dei, 60.  
 Agostino Caracci, 948.  
 Agrippa, Temple of, 68.  
 "Ahava," River to, 69.  
 Ain Moussa, 1002.  
 Aisle of Canterbury, Cathedral, 1103.  
 Alabaster Boxes, 72.  
 Scent Bottles, 72.  
 Alb, 74.  
 Albans, St., Abbey, 453.  
 Nave of Abbey at, 1276.  
 Aldrich, D. D., Henry, 76.  
 Alabaster Vessels, 73.  
 Alby Cathedral, 754.  
 Almond Tree, 90.
